MUMBAI AMATEUR RADIO SOCIETY

News Letter

10/8/2000.

GREETINGS It's a great pleasure to write this monthly newsletter. I hope you will cooperate in my effort to make this regular and interesting . There is lots to do and lets have some enthusiasm folks!

For the 15th August , Independence Day celebrations on air, we hope to cross last year□s mark. Letters to this effect have been sent by courier to 400 licence holders. All Hams are requested to check into the Night Owl□s Net at 145.20 and make the event a success. To make sure that people don□t forget, they will be reminded over lima lima.

The monthly meeting of the club will be held at Shetty□s on Sunday the 13th of August at 10 a.m. The agenda for the meeting is as follows:

1. Allocation of Portfolios.

2. Decide on the net controller for the 15th August Special Night Owl□s Net.Plus other items which will make the event successful

3.Discuss plans for Ganpati Visarjan scheduled for 12th September.

4.Discuss plans for Ham Awareness Day on 14th September.

Hope to have an eyeball with you on Sunday.

Till then 73s!

Sarla

GANESH VISARJAN

dear friends,

Ganpati Visarjan is on 12th Sept 2000, as you all are aware that every year we offer our services
for communication support for this occasion.

For past few years we have conducted this exercise, but the end results were not very fruitful,
last year was better, atleast we helped some lost and found cases, some medical emergencies etc. this year we hope to do better, meaning better co-ordination with Samanbai Samiti,COPS, BMC, Hospitals,LIfe guards, Civil Defense etc..

But before we do that, we must know our strength, as to how many departments we can support,
meaning we must know how many hams are likely to participate.

you are requested to kindly get in touch with LNZ- 2870484 RIO- 3885302/7 NLF-3866312. or send an email to m_a_r_s@... for your confirmation. please note that all hams are invited to participate wheather MARS Member or not. also see if you can get some SWLs to assist you during the event.

please note that by the time of the event we shall our repeater up, so no more external antenne
only handies on rubber duck. more mobility this time, so lets have fun.

New VHF Repeater

Dear Members,

We are pleased to announce that our new repeater is now working very well, although it is not
permanently installed, it is available for use, the frequencies are 145.200 Mhz RX and 144.600 TX
meaning you need to work 145.200 Mhz with a (-) shift of 600Khz.

Please note that the Night Owls Net is now also conducted on the new repeater, hence to check in kindly use the above mentioned shift.

We hope that you would be happy with the performance of the New Repeater, this was done on a
war footing to meet the deadline for the Ganesh Visarjan. Thanks to efforts of VU2IIA (Mahesh) and VU2SXF (Sandesh) who have put their time and efforts beyond the call of duty.

The repeater will be permanently installed very soon, but nevertheless it will be available for use from its temperory location.

Use it well, be active on VHF and have fun.

MUMBAI AMATEUR RADIO SOCIETY

Ganesh Visarjan

Dear Members,

This is with reference to my earlier mail dated 23th August 2000. I had requested all the members
to send their confirmation for their participation in the Communication support for the Ganesh Visarjan. This is very much required in order to commit ourselves with the authorities.

With much regret I have say that till date only 3 persons have given their confirmation. At this rate
we better cancel the program. If people are not interested we might as well keep quiet and do nothing.

So far we have not registered our society, maybe we should give it a second thought.

Hallo Mumbai Amateur Radio Society
From : Rajesh Bagwe (VU2QIJ)

This is extremely excellent idea to provide communication support to Government Machinery . And Yes I would like to contribute my time for this social Activity through M_A_R_S but main hurdle is I don't have any equipment . what do you say about that ?

Now regarding registration of the activity : 1) Why it is not registered as yet ?

2) If it is applied for the registration then please give details as early as possible.

Expecting your E.mail in the matter.

best regards

22. Monthly Meeting.

Yahoo group: m_a_r_s
Date: 2000-09-08 04:42:14 UTC
From: Mumbai Amateur Radio Society
Topic: 22 Message: 22

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

The Monthly Meeting for September 2000 will be held on 10th September 2000 at 10:00 hours once again at Shetty's Resturant (Nana Chowk) . Kindly attend the same on time. Last meeting
we had a poor attendence of only 15 people, thats not good, therefore you must take some time
out and attend the meeting.

The main agenda for the meeting would be Ganesh Visarjan. the briefing will be also done at the same time. Therefore all the participents for the Ganesh Visarjan MUST attend the meeting it is
quite important.

You are aware that we still do not have a place for conducting for Monthly Meetings, My request is why don't we all look out for a place to conduct the meetings. Your efforts in the matter will be highly appreciated.

We have received a few suggestions that why don't we conduct the meetings on VHF on the air.
well there are few problems for that such as :-

1. All our members do not have VHF capability.
2. What about members who are SWL's ? we cannot keep them out , they have a right to attend the meetings.
3. Lot of paper work need to be take care of which cannot be done on the air.
4. Monthly meetings is the only time we have an eyeball, so why not ?

Nevertheless we shall put up the suggestion in the monthly meeting.

There is lot to be done in order to revive this wonderful hobby , The primary goal of our society is
just to do that. If members can't even take out time for monthly meetings, then I seriously doubt that we will ever reach our goal.

Also note that till date we have only 30 members, we started with 25, so please try to enrol more members. This is not MY society it is OUR society. We all wanted it and we all formed it
remember that.

Our Society is still at a incubation stage. It requires lot of efforts in order to survive against all odds,therefore I once again request you to kindly that more interest and try to take out some time.

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

The ham awareness day is on 20th Sept 2000 and not in october. Atleast I was under the impression that it was in October, I don't know about you guys.

Well ! we still have 5 days, so lets make the most of it. I have already triggered few of our
members and they shall start rolling tomorrow morning first thing. We need to finalize all the
locations for demonstrations by Saturday latest, because we need to give a press release.

We shall appreciate if some of you guys can arrange a College or a School to conduct the Demo. I understand this a very short notice but lets give it our best shot.!!!

Also all guys willing to participate in the Ham Awareness Program, please contact MHC (Minoo) on L.L 492 0898 A.S.A.P. 20th Sept being a Wednesday (working day) it may be difficult for most of us, but I am sure we can manage to spare 2/3 hours for the day.

On Sunday we shall have a briefing meeting.

Looking forward to your assistance and participation in the event.

Dear Members,

There has been major confusion about the date of the Ham Awareness Day, last night I checked some sites and few of them are celebrating on 2oth sept. I assumed that it was 20th so I sent you all an e-mail .

But again I have checked it seems that the whole of U.S is celebrating on 16th Sept. I have given few L.L. and most people think it is 16th Sept. if any of you are sure then pls get in touch immediately.

We shall check on the air anyway, if it is tommorrow then I wonder how much can we do , lets try our best

Thank You

On Occasion of Ganesh Visarjan, members of M.A.R.S have performed wonderfully.

Let us take this opportunity to thank ALL THE PARTICIPANTS specially the following:

Girish Sukhla (LNZ) for co-ordinating with Brihan Mumbai Sarvajanik Ganeshutsov Samanwai Samati and the LifeGuards.

Nirav Sanghavi (NHR) & Zayros Zend (ZRS) for co-ordinating with the B.M.C and the Police.

Minoo Contractor (MHC) & Nafisa Shikari (NFS) for giving complete support as relay Stations.

Pankaj Pasad (RIO) for arranging good food (better late then never).

Sarla Sharma (SWS) for wonderful press coverage, which shall give the society a great mileage in the future.

Jaiprakash (JPN) & Girish (LNZ) for providing communication network par excellence during the medical emergencies in the early morning hours.

And last but not the least.

Mukesh Jaitley (UGJ) for getting the sponsorship from "ICIBAAN HONDA" , which has set a precedent that all our coming events can be self-financing.

Thank you , with this kind of performance we are sure to do great guns in future...

For Mumbai Amateur Radio Society.

Nilesh Rathod, Secretary.

Hi Friends How can we forget that Nilesh VU2NLF is also very much a part of nthe team that worked for the Ganpati Visarjan and probably he has worked the hardest. I am sure all with him and will not only extend our cooperation to him but also take initiative and take up activities and see them through. Thanks once again to everyone including Nilesh.

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

The Jamboree On The Air this year will be held on 21st & 22nd October 2000.
(Saturday & Sunday)

J.O.T.A is an International Event. It is probably as important as HAM Awareness Day. On these 2 days HAM and Scouts & Guides get together and HAMs allow the Scouts and Guides to talk on HAM Bands with their counter parts all across the world.

M..A.R.S has already started preperations for this Mega Event. We have Co-ordinated with Maharashtra State Bharat Scouts & Guides to conduct JOTA as never done before (atleast in Mumbai). They have requested us to give them 6 JOTA Stations, 5 in Mumbai and 1 Station in Thane. The HAM Stations shall have H.F and VHF capability. Each station is expected to put aleast 100 Scouts & Guides on the Air. With the combind efforts of all the Participents we may put 600 to 1000 Scouts on the air in the span of 48 hours.

In reality we shall be operating only 6 to 8 hours on both the days, shall we say that 10 to 15 scouts per hour per station very comfortably.

We are also co-ordinating with all the other JOTA stations in India and around the world for better interaction.

All the participents can work for few hours in shift at there mutual convient times. (with the consent of their Group Leader) . You are requested to inform me (NLF) if you are interested to participate in this Program. For God sake do not wait till the last moment (like Ganesh Visarjan) for your confirmation. We require the information of all the participents well in advance so that we can plan the event properly and make is successful.

We sincerely hope that you would spare few hours from your busy schedule and contribute your efforts in Promoting HAM Radio in the city of Mumbai.

Looking forward to hearing from you soon.

73s

54. Customs Duty on Ham Equipments

Yahoo group: m_a_r_s
Date: 2000-10-10 17:35:49 UTC
From: Prashant Koli
Topic: 54 Message: 54

Dear All,
You must be aware that many club sites (Indian of course) tell that total customs duty on Ham sets is 9.2%. Even CALLBOOK2000 says so. THAT IS HOWEVER NOT TRUE.Please note that many hams have come into trouble when they imported such equipments thinking that duty is 9.2% only.
The break out of our Ham Duty is : 5% Basic (this has come down from 25% to 5% , as notified in Notification NO.16) CVD :16% , Surcharge : 10% of basic 5% duty, then SADD 4 % .So total duty comes to 23+ percent.
It is also said that Goods falling under customs tariff No 8525.20 are exempted from payment of surcharge as per the Notification No. 19 dated 01-03-2000 reproduced in the Indian Customs Tariff 2000 - 2001.It is seen however that surcharge at 0.5% is also charged.

We hams had forgotten 16% conterveiling duty (equivalent to central excise duty) which is levied to protect Indigeneous manufacturers.

So be careful.Import duty is almost 25%.

-Prashant Koli

55. Customs Duty on Ham Equipments

Absolutely correct Neville!But then there are lobbies who make Govt in power believe that they actually manufacture great stuff in India and hence need protection and hence this C.V.D. Customs only enforces the policy.And then where is your apex body who should have taken up the matter with the Finance Ministry to get rid of CVD.

72. A Hallmark E-Card from nafisa shikari

Yahoo group: m_a_r_s
Date: 2000-10-26 04:59:10 UTC
From: nafisahs@hotmail.com
Topic: 72 Message: 72

Greetings! We wanted to let you know that nafisa shikari created a Hallmark.com e-card for you. Click this link to see it, or copy and paste this link into your Web browser's address line:
http://ecardview.hallmark.com/hmk/Website/greeting.jsp?id=EG1109-136180-1239059

You can also go through our home page to see it. Here's a link:
http://www.hallmark.com

Once there, click the "e-cards" link, then scroll to the bottom of the page to find "pick up a greeting". Click that link and it will ask for your e-mail address and retrieval number. Your retrieval number is
EG109361239059.

This e-card will be available for 90 days. If you'd like to send one back, use the "send your own greeting" button beside the e-card. Enjoy!

Jan Scott
Hallmark.com

P.S. To us, your privacy is a priority. Here's a direct link to our online Privacy and Security statement if you'd like to review it.

Hi OM/YL's

Jota was a very successful event done by all mars members. Thanks to all participants for the same.
Keep it up.

Details of Suman Nagar, Chembur JOTA station:

Attendence = 53 scouts & guides + 10 officials.

HF working = We worked on 20mtrs band and had contacted total 14 JOTA stations.

VHF = 59 contacts were made between 3 JOTA stations
viz. Thane, Shivaji Park & Hindu Colony.

Along with me VU3MHC & VU2IIA was there at my location and the visitor hams were VU3ITT, VU2NLF & VU2UGO

Thanks to VU2NLF for visiting my site and trimming down the HF antenna.

Best regards to all and do make all events successful.

M.A.R.S. is likely to start tution classes this month. The location of the classes shall be Dadar. There shall be evening batch on (Mon/Wed/Fri) from 18:00 to 20:00 Hours. We also may have a Sunday Batch from 09:00 to 16:00 hours (Crash Course). The duration of the classes shall be Three months.

We shall be conducting a Ham Awareness drive on one of the coming week ends. This shall fetch us the students required for the classes. Upon getting the response we shall conduct the classes accordingly.

In View to the above it has been decided in the last month meeting that a Education committee should be formed in order to conduct the classes in professional manner and get the optimum result.

All members interested in becoming a part of the committee may kindly respond immediately to this letter and get in touch with SXF or NLF or MHC ASAP.

All members who do not wish to be a part of the committee, but still would like to offer their assistance may also contact the above HAMs. ASAP.

Looking forward to your participation in the above activity.!!

73s

101. NIGHT OWL'S NET

Yahoo group: m_a_r_s
Date: 2001-01-09 13:51:30 UTC
From: nafisa shikari
Topic: 101 Message: 101

Hi Friends

This is about the Night Owl's Net which we conduct for the city of Mumbai at 21:30 hrs. every day on 145.200. We find that many folks interested in checking into the net are unable to do so as they reach home around the time of the net. Another reason for not being on the net maybe the great quiz show KBC compared by Amitabh Bachchan whose voice is ofcourse more enticing than Vispi's and mine. So, we are thinking of changing the time of the net from 21:30 hrs. to 22:00 hrs. to enable most people, interested, to be on the net. We have thought of January 26th as the day when the time would be changed so as to give you all sufficient time to send in your comments and suggestions. Hope to hear from you all.

103. Good Timming

Yahoo group: m_a_r_s
Date: 2001-01-12 18:56:33 UTC
From: Mr.Neville Shroff
Topic: 103 Message: 103

Yes,
10 PM is a good time. Not that I watch KBC. I detest the Tango Victor but others love it so the timming has to be changed. I hope the Repater starts soon as the same was very convienent to use from Lonavala with just a handy.
Gooluck to all.
Regards,
Neville

MUMBAI AMATEUR RADIO SOCIETY

MARS conducted Ham Awareness Program on 12th & 13th January 2001.

Location : VPM Polytechnic College, Thane.

Team : vu2nlf (Nilesh), vu2sws (sarla), vu3pdz (Prashant), v3oam (Sudhir)
vu2ugo (Sandip), vu3aua (Arun singh) and vu3pan (Pravin).

On 12th a lecture was delivered by SWS and NLF, a VHF demonstration was also given on that day. About 75 students attended the program.

On 13th HF demo was given to the students and the staff of the college.

The response was quite good, some 29 students would like to become HAMS.
but only after their exam (in April or May).

The Principal also requested us to start a Club Station in their college in the near future. They also gave a donation of Rs.600/- to MARS for conducting the Demo.

Location : Bhavans College, Andheri.

Team : vu2sxf (Sandesh), vu2ugj (Mukesh), vu2iia (Mahesh), vu2nhr(Nirav)

On 13th a lecture was delivered by NHR and NLF, a VHF demonstration was also given on that day. About 80 students attended the program.

The response was quite good, some 54 students would like to become HAMS.
but only after their exam (in April or May).

107. minutes of the monthly meeting.

MUMBAI AMATEUR RADIO SOCIETY

The monthly meeting of MARS was conducted on 14th January 2001 10:00 am at vu2auu 's qth .

It was attended by 11 members (nlf,hit,sxf,iia,auu,aua,out,ugo,oam,pdz,rio).

debriefing of the Ham Awareness drive was the main topic on the agenda. It was resolved that a special team for "Ham Awareness Drive" should be formed who can conduct the demo's with perfection. It was also resolved that we shall conduct 1 demo every month at different locations such as colleges, clubs like lions,rotary,adventure and similar organisations.

Our VHF repeater was next on the agenda. As you may be aware that we have homebrewed a repeater, but due to some technical problem it is off the air presently. It was resolved that the repeater would be fully functional permenently by 20th febuary 2001. the task is undertaken by
vu2sxf(Sandesh) and vu2iia (Mahesh).

Next on the agenda was the Ham Radio Classes. After the feedback from the demos it was clear that the student are awaiting their exams and will only join in the month of may. Nevertheless
many of our members have their friends and relatives waiting to join the classes. It was resolved that if we can get about 15 to 20 students we shall start the classes immediately on 22nd January 2001. the location shall be Shisu Vihar School at dadar. (mon/wed/fri) 18:00 t0 20:00 hours for three months.

All members are requested to conduct SXF (Sandesh) on 873 4719 or MHC (MInoo) 492 0898 if you have any students.

Topic: 112 Message: 112

Dear All,
Kachh has been struck with a devastating earthquake which has nearly turned the place into history. It would take decades before the earthquake struck areas regain their original shape. Entire villages and towns have collapsed like a bunch of cards, claiming thousands of lives. Epidemic is likely to follow since the dead bodies are still lying beneath the debris.

I am giving this feedback after our team has personally visited the destructed areas and provided communication support for 6 days. The communication link has been restored using Satellite phones and DOT lines within 5 days, but still there is a lot to be done. We have witnessed the worst scenes of our lives where dogs were seen eating human dead bodies.

Under this scenario whatever help that can be sent to Kachh is not going to be adequate enough. Also there is absolute loss of co-ordination between officials to control the situation. Places like Bhuj have received excess of relief material whilst a lot of small villages are yet to recieve the first phase of relief.

There would be no limit to all this and is again not a topic of priority to be discussed. The only priority of the hour is to provide relief to the mass that has been struck with this rude step of nature.

Hence I would request everybody to extend their help at their fullest. Kindly provide relief in whatever way that is possible. At the same time ensure that whatever relief that has been arranged reaches to the needy and is evenly distributed.

If you are associated with any of the NGOs or are in a capacity to provide a substantial help, then kindly spend a couple of your valuable days visiting such places and personally ensuring that the help reaches the right place, rather than handing over them to somebod. At the same time do not crowd the place because two people representing an organisation would be fair enough.

The only request to all of you is that DONATE GENEROUSLY.......... BUT THROUGH PROPER CHANNELS

You never know whether your valuable support is reaching the needy or is going waste
.....

Thanks and Regards,

Mehul A. Chovatia.

MUMBAI AMATEUR RADIO SOCIETY

dear members,

You all are aware that on 26th January 2001, On republic day ,India experienced a Natural Disaster. Bhuj, Anjar, Bachau and many other places around that area were badly effected by the earthquake.

The Disaster Communication team of M.A.R.S took spontaneous decision and was mobilized immediately on the same afternoon.

The Complete report of their visit is enclosed herewith for your perusal.

The team did a great job, all the members performed wonderfully. All the practice for disaster communication exercise pay off. to quote the response of gujrat hams " The Mumbai hams performance was flawless"

Other members who supported from Mumbai also performed brilliantly, especially Rajen Kavadia [vu2rig] and Minoo Contractor [vu3mhc] without their help it would have been very difficult to co-ordinate the whole operation.

I take this opportunity to thank all the participants on location and from Mumbai for providing their assistance in this hour of difficulty.

>
> +Available on ARRL Audio News
>
> ============================================================
>
> ==>AO-40 FUTURE RESTS ON REDUCING SPIN, REGAINING ATTITUDE CONTROL
>
> The key to a successful AO-40 recovery continues to be a matter of reducing
> spin and regaining the ability to adjust AO-40's attitude from the ground.
> AMSAT says the current problem is a lack of accurate AO-40 attitude data.
>
> Only when ground controllers can accurately determine the satellite's
> attitude will it be possible to change it and correctly aim AO-40's
> high-gain antennas for optimal reception on Earth. Ground controllers have
> had no luck hearing AO-40's transmitters on the omnidirectional antennas on
```

> 2 meters, 70 cm or 1.2 GHz. Since the satellite's computer was reset and
> telemetry resumed December 25, the AO-40 ground team has been analyzing
> telemetry sent via the 2.4 GHz beacon--the only transmitter now operating.
>
> In its latest dispatch on AO-40, AMSAT-Germany waxed nearly poetic in
> describing the satellite's present situation. "AO-40 is currently like a
> ship that's lying on a sandbar in the fog at low tide," an update on the
> AMSAT-DL Web site declared. AMSAT-DL said AO-40 was "in the fog" because its
> high angle with respect to the sun temporarily prevents the sun sensors from
> providing attitude data. It's "at low tide" because the steep solar angle
> means less illumination of the solar panels and less energy produced. And
> it's "on a sandbar" because the satellite can't be set free from its present
> situation without some effort.
>
> Ground controllers have been hoping that a previously announced "de-spinner"
> programming routine could permit AO-40 spin control without having to rely
> on the sun sensors. But even if the programming fix fails, by April,
> controllers reason, the satellites sensors will again see the sun and
> "thanks to magnetorquing, spin and attitude can be actively improved upon
> the rising tide." Once the spin is reduced, sun angle improved, and antennas
> pointed, testing can resume. Still outstanding are tests of the VHF and UHF
> transmitters, the arc-jet motor, and the reaction wheels, among others.
>
> Both AMSAT-DL President and AO-40 Project Leader Karl Meinzer, DJ4ZC, and
> AMSAT-NA President Robin Haighton, VE3FRH, have continued to be optimistic
> that AO-40 will have a useful life of Amateur Radio service. AMSAT-DL says
> the recovery effort has been slowed somewhat because of limited access time
> on the part of the command team, due to AO-40's current orbital parameters.
>
> ==>INDIAN HAMS PUT AVAILABLE HAM TECHNOLOGY TO THE TASK
>
> Hams assisting with earthquake relief operations in the Indian State of
> Gujarat are even taking advantage of the UO-14 amateur FM satellite as they
> continue providing communication from the stricken region. Hams within the
> quake zone and those keeping touch from the outside also have found
> themselves caught up in the human tragedy. The death toll from the quake now
> is estimated at up to 50,000 and could rise higher. More than 600,000 were
> left homeless.
>
> Bangalore-based Guru Rao, VU2GUR, and Sandeep Shah, VU3SXE, a Gujarati
> Bangalorean engaged in relief work in Gujarat have been using UO-14 to touch
> bases. "Guru and Sandeep were quick to seize the opportunity and roped in
> the amateur satellite UO-14 to maximize all possible communication routes,"
> said Raj Kumar, VU2ZAP, another Bangalore ham who's been following the
> Amateur Radio effort.
>
> While some telephone service in the earthquake zone has been restored,
> Amateur Radio was the primary link to the outside world in the immediate
> aftermath of the January 26 earthquake.
>

> Another Bangalore amateur, Chandru Ramachandra, VU2RCR--a former UNESCO
> official--drove his SUV to Bhuj, 1700 km distant. Carrying a medical team
> and some 400 kg of gear and supplies, he set up a station to establish a
> link between Bhuj and Bangalore. As of a few days ago, 18 amateurs from the
> State of Karnataka were handling communication regarding placement of
> doctors and medical supplies as well as health-and-welfare inquiries into
> areas where the telephone system is still out.
>
> "This has become a practical exam showing our capability and preparedness in
> disaster management," said Bangalore Amateur Radio Club President Lion Ajoy,
> VU2JHM.
>
> Most of the earthquake-related traffic continues to be handled via HF on 40
> and 20-meter SSB, although some VHF FM links have been established for local
> work in Gujarat.
>
> Horey Majumdar, VU2HFR, says hams in Calcutta, where he lives, have been
> able to locate and pass along information about the well being of several
> individuals. "However, the best option would have been to have our own team
> from Calcutta at Bhuj," he said. Majumdar says handling some of the H&W
> inquiries has been tough. In one case, the information he got via ham radio
> from the quake zone was not good news. "It was extremely difficult for me to
> convey to their family that this person, his wife and 7-month-old daughter
> didn't make it," he said. "There must have been thousands of families like
> this."
>
> Late word from Prem Manani, VU2XMX, in Gandhinagar, the capital of Gujarat,
> is that reliance on amateur communication has ended with the restoration of
> normal communication channels, although he said some stations were still in
> action at the request of the Indian government. "The untiring job done by
> all hams was appreciated by one and all in the government," he said.
>
> ==>ARRL OPEN FOR BUSINESS AS CLUB STATION CALL SIGN ADMINISTRATOR
>
> The ARRL is open for business as an FCC-designated Club Station Call Sign
> Administrator. ARRL-VEC Manager Bart Jahnke, W9JJ, reports that the ARRL
> CSCSA has received 10 club station applications to date since the program
> officially began January 22, the date the FCC stopped accepting club station
> applications.
>
> "Beginning this program has been a relatively painless and very
> straightforward process," Jahnke said. "Keeping the procedures simple has
> played a big role in how smoothly things have gone."
>
> Once an application is received at the ARRL-CSCSA, processing typically
> takes two business days, Jahnke said. All but one of the applications
> received by the ARRL CSCSA have been processed and granted by the FCC. "The
> remaining application was faxed to us, and we need the original signed
> application rather than a fax in order to process such requests," Jahnke
> pointed out.

>
> Last month, the FCC designated the ARRL-VEC, the W5YI-VEC and the W4VEC
> Volunteer Examiners Club of America as Club Station Call Sign
> Administrators. Club station applicants may file via any of the three
> FCC-designated CSCSAs using either NCVEC Form 605 or W4VEC Form CSCSA to
> file. The new CSCSAs receive and process hard-copy applications and submit
> the information electronically to the FCC. The three FCC-designated Club
> Station Call Sign Administrators do not charge for their services. Club
> Station Call Sign Administrators do not handle requests for vanity call
> signs.
>
> Amateurs may seek a new club or military recreation station license, or may
> file for modification, renewal or duplicate (requesting another hard copy
> license, if the original was lost) of a club or military recreation station
> license using NCVEC Form 605 or W4VEC Form CSCSA. NCVEC Form 605 is
> available from the ARRL Web site, http://www.arrl.org/fcc/forms.html .
>
> RACES stations may file modification or duplicate requests, but RACES
> licenses may not be renewed, and the FCC is no longer granting new RACES
> licenses.
>
> The FCC requires applicants to obtain and use an Assigned Taxpayer
> Identification Number--or ATIN--on their club station applications--although
> a club that already has registered with the FCC's Universal Licensing System
> may use its Licensee ID Number instead of its ATIN. If a club has its own
> IRS-issued Entity Identification Number, or EIN, that number also may be
> used instead.
>
> ==>A SAD END TO ROUND-THE-WORLD SOLO SAIL ATTEMPT
>
> An attempt by 76-year-old David Clark, KB6TAM, to become the oldest person
> to sail solo around the world came to a sad end this week when Clark's
> vessel, the Mollie Milar, sank two days after leaving Cape Town, South
> Africa. Clark was rescued, but his "constant companion" Mickey, a west
> highland terrier, was lost at sea during the rescue attempt. Clark was on
> the final leg of his journey.
>
> "David has been rescued by a container ship and is okay, although I have not
> been able to talk with him yet," said his wife Lynda, in an e-mail posting.
> "The ship is heading for East London, South Africa, and I am waiting for a
> phone call from him, hopefully tomorrow."
>
> David Clark's 44-foot sailboat went down the evening of February 7. Lynda
> Clark said that she got the news via ham radio. "According to the ham
> operator who contacted me, the boat sprang a leak and the pump could not
> cope," she said. "It was very heavy weather, so when he realized that the
> situation was hopeless he called for help and a passing container ship sent
> a lifeboat to pick him up, and he had Mickey with him."
>
> Lynda Clark said that the lifeboat capsized on the way back to the ship, and

> everyone ended up in the water. "It would have been pitch dark, and in all
> the trauma Mickey got lost. I'm sure David is heartbroken, as am I," she
> said. "All of you who have met Mickey along the way know what a special
> little guy he was."
>
> " 'So close, and yet so far away,' I guess the quote goes," she concluded.
> Lynda Clark said she would post additional information as soon as she hears
> from her husband.
>
> During his journey, which began in late 1999, Clark had been keeping in
> touch with his wife and family via ham radio, and he was a regular check-in
> on the Maritime Net on 20 meters. His vessel, which was named for his
> mother, also had satellite communication gear aboard.
>
> Clark had been hoping to return to Ft Lauderdale, Florida, in mid-May, in
> time for his 77th birthday.
>
> ==>SO-35 SATELLITE FAILURE BELIEVED PERMANENT
>
> SUNSAT SO-35 has ceased operation, and ground controllers at South Africa's
> Stellenbosch University, where the satellite was built, say SO-35 appears to
> be off-the-air for good. The satellite had served as a popular and easily
> accessible FM-mode repeater.
>
> "Unfortunately, little hope remains after two weeks of recovery attempts,"
> said Stellenbosch University's Johann Lochner, ZR1CBC, in a posting to the
> AMSAT bulletin board. "Thanks to all who shared in our fun. Your feedback
> and encouragement made most of it happen."
>
> A statement (http://sunsat.ee.sun.ac.za/news/20010201.html) from
> Stellenbosch University's Electronic Systems Laboratory said the last
> communication with SUNSAT was on January 19 at 1522 UTC. "We are certain,
> after having performed several tests since the last contact, that an
> irreversible, probably physical, failure has occurred on the satellite," the
> statement said. "It is therefore unlikely that we will have any further
> contact with SUNSAT, apart from the occasional visual sighting by
> telescope!"
>
> Built by Stellenbosch grad students, SO-35 was launched February 23, 1999,
> from Vandenberg Air Force Base in California aboard a Delta II rocket.
>
> Ground controllers say it's unlikely that battery failure was the cause of
> the shutdown. It's believed the failure resulted from multiple internal
> problems or possible collision with an external object resulting in major
> physical damage.
>
> The SUNSAT Web site is at http://sunsat.ee.sun.ac.za.
>
> ==>LF SIGNALS CROSSING THE POND, BUT NO QSO YET
>

> While efforts to complete a transatlantic LF QSO still have not been
> successful, things have been looking up lately in the nether reaches of the
> radio spectrum. Amateur Radio activity in the vicinity of 136 kHz has
> resulted in several recent "sightings" of signals from the UK here in North
> America. The first such signals were heard in the US in late January and
> early February. A report that the AMRAD WA2XTF 136-kHz beacon in Virginia
> had been heard in the UK turned out to be in error, however.
>
> The most recent report came February 6 from Sandy Sanders, WB5MMB, in
> Oakton, Virginia, who says he was able to copy Lawrence Mayhead, G3AQC, and
> "dashes" from Jim Moritz, M0BMU, in the vicinity of 136 kHz. Sanders'
> monitoring station is in a three-story office building.
>
> Such weak LF signals are not actually heard but seen. Reception of weak LF
> signals typically is done using spectrographic software. Signals are
> transmitted using dual-frequency CW--or DFCW
> (http://www.qsl.net/on7yd/136narro.htm)--or very slow-speed CW, also known
> as "QRSS." LF enthusiast Dexter McIntire, W4DEX, says that in DFCW the dot
> and dash elements are sent with the same duration in time being separated by
> frequency, making it easier to identify a signal from weak-carrier QRM.
>
> >From his QTH in coastal North Carolina, McIntire also has copied G3AQC on
> 136 kHz, possibly marking the first time an amateur LF signal from the UK
> has been heard and verified in the US. He also received M0BMU's LF
> transmissions for a possible distance record.
>
> "My best reception of M0BMU, Jim Moritz, occurred at 0100 UTC on the 31st of
> January," McIntire said. For LF reception, he ties together both legs of his
> 160-meter dipole and tuned the antenna for resonance with a small
> ferrite-core inductor. Moritz estimated his effective radiated power at 1 W.
>
>
> McIntire's reception of M0MBU might have set a new distance record. He
> calculated the distance at nearly 6394 km, and Moritz figured it at 6371
> km--apparently edging out what's believed to be the record of 6311 km set by
> VA3LK and IK1ODO.
>
> Mayhead said he'd been receiving "excellent signals" from John Currie,
> VE1ZJ, and Larry Kayser, VA3LK, so he decided to run his own series of
> beacon tests with the idea of encouraging stations in North America to
> listen.
>
> McIntire says that on January 27, he captured some of G3AQC's DFCW
> transmission--including the letter "Q"--and sent him a screen shot, which
> Mayhead confirmed as his. On a subsequent evening, W4DEX copied G3AQC's
> entire call sign.
>
> "I think that we can reasonably claim that these events constitute the first
> sighting of a UK station in the US," Mayhead concluded. He estimated that
> his setup generates an ERP of about 350 mW.

>
> For a while, it had been thought that an Amateur Radio Research and
> Development Corporation (AMRAD) WA2XTF experimental 136-kHz beacon in
> Vienna, Virginia, had been spotted in the UK. John Sexton, G4CNN, had
> reported copying the AMRAD experimental beacon on 136.750 kHz on February 5
> and 6, momentarily raising the excitement level at AMRAD. That turned out
> not to be the case. Sanders announced this week that it was determined the
> signal heard in the UK was about 5 Hz high and did not have a characteristic
> "chirp" that distinguishes the WA2XTF beacon.
>
> Like several other countries in Europe, the UK has an amateur band at 136
> kHz. Experimental amateur operations have been authorized in Canada; the
> AMRAD beacon in the US is licensed under the FCC's Part 5 experimental
> rules.
>
> In October 1998, the ARRL petitioned the FCC to create two amateur LF
> allocations at 135.7-137.8 kHz and 160-190 kHz. The FCC has not yet acted on
> the request.
>
> McIntire is among those who'd like to see a new LF band become reality. "I'm
> champing at the bit to transmit on 136 kHz!" he said.
>
> ==>ARRL OFFERS NEW FIVE-YEAR MEMBERSHIP PLAN
>
> With a membership dues increase going into effect July 1, 2001, the ARRL is
> offering a special five-year membership plan until then, so members can lock
> in at the current, lower dues rates. Effective immediately, current or
> prospective ARRL members in the US and US possessions can obtain a five-year
> renewal or membership for $146 ($122 for those 65 or older)--a saving of $24
> ($18 for those 65 or older) from the cost of year-to-year renewal at current
> rates!
>
> Due to postal considerations, this offer cannot be extended to those living
> in other countries. The special five-year membership offer expires June 30,
> 2001, the last day the present dues schedule is in effect. After that,
> annual dues will increase to $39 for individuals ($34 for those 65 and
> older).
>
> Another option is to apply for an ARRL Life Membership for $850. Special
> discounts apply to senior and visually impaired applicants. A complete rate
> schedule and application form is available on ARRLWeb,
> http://www.arrl.org/join.html .
>
> ==>SOLAR UPDATE
>
> Helio honcho Tad Cook, K7VVV, Seattle, Washington, reports: Average daily
> sunspot numbers were up almost 10 points, and solar flux was up about 1
> point for the past week, when compared to the previous week. This seems to
> be a period of quiet sun, and the trend is expected to continue. Projected
> average daily solar flux for the next 45 days is expected to be about 163.

> This is in line with current daily values.
>
> Solar flux peaked at 170 on Tuesday, and is expected to drop over the next
> few days. Projected flux values for Friday through Monday, February 12 are
> 155 for Friday, and 150 for the next three days. Flux values are expected to
> meander between 155 and 165 until February 21-24, when they are expected to
> rise to 170 again. Another peak just above these values is expected around
> March 7, although it is really too early to tell.
>
> Even with a quiet sun, there have been some unsettled geomagnetic
> conditions, but no real geomagnetic storms. February 6 was a bit unsettled,
> but the planetary K index only briefly reached 4. Planetary A index for the
> day was 11, which was also the mid- latitude A index. Projected planetary A
> index for the near term is mostly in the single digits. A forecast received
> today from the Solar Department of the Astronomical Institute in Ondrejov,
> Czech Republic shows quiet conditions on February 11, 14 and 15, and quiet
> to unsettled conditions on February 9, 10, 12 and 13.
>
> Sunspot numbers for February 1 through 7 were 141, 109, 149, 164, 157, 161
> and 163 with a mean of 149.1. The 10.7 cm flux was 160.9, 166.3, 163.6, 164,
> 165.3, 170 and 164, with a mean of 164.9. The estimated planetary A indices
> were 7, 5, 2, 2, 3, 11 and 5 with a mean of 5.
>

> * Atlantic Division Director Bernie Fuller, N3EFN, recovering: ARRL Atlantic
> Division Director Bernie Fuller, N3EFN, is said to be doing well following
> bypass surgery on February 2. All indications are that he should be able to
> return home this week. Well wishers may contact Bernie via his home address,
> 17668 Price Rd, Saegertown, PA 16433.--thanks to ARRL Atlantic Division Vice
> Director Bill Edgar, N3LLR
>
> * Call sign switcheroo: A Florida ARRL member has a new call sign he doesn't
> want because he erroneously checked off the wrong box while changing his
> address on-line via the FCC's Universal Licensing System. The amateur, who
> shall remain anonymous, sought ARRL assistance to correct what he thought
> was an FCC error. ARRL-VEC Manager Bart Jahnke, W9JJ, looked into the
> matter. As it turns out, the applicant apparently answered in the
> affirmative on Schedule D of Form 605 where it asks "Is this a request to
> change a station call sign systematically?" The FCC accordingly changed the
> call sign. Jahnke points out that applicants seeking to change their
> addresses in the FCC's database do not need to use Schedule D, and even if
> it were used, the correct answer would have been "no" unless the applicant
> wanted a new sequential, or systematic, call sign. Jahnke said the applicant
> could attempt to plead his case to the FCC, which often is reluctant to
> correct such errors by applicants. He also suggested that the applicant
> could recover his old call sign by applying for it under the vanity program
> as a former holder and paying the $14 fee. Late word is that the licensee is
> going the vanity route.
>
> * W9NN to observe 80 years as a ham: Bob Baird, W9NN, of Stevens Point,
> Wisconsin, has been a ham for 80 years and is one of the founding fathers of
> the Quarter Century Wireless Association. He also turns 95 on February.
> Friends will gather for a "dual-celebration" luncheon February 17, 2001 (11
> AM-1 PM, at the Stage Coach Inn at Mosinee; contact Wayne Johnson, K9MIF,
> k9mif@... for details). Bob Baird's work in founding the QCWA took
> place about 1921. He's a member of Chapter 174. A QCWA plaque presentation
> is on the program. Baird was engineering supervisor at Chicago's WGN radio
> for 36 years. He also was the founder of the W9DXCC. He continues to be
> active on CW and possibly other modes.--Badger State Smoke Signals

119. QRM on HAM band

Yahoo group: m_a_r_s
Date: 2001-02-13 07:39:48 UTC
From: Sandip Adiwarekar
Topic: 119 Message: 119

Hi !!!

here are few frequencies on which i found QRM :

QRM by cordless phones : 144.900 145.135 145.165 145.200 145.612

By Zee Alpha Marathi channel :
145.730 to 145.790

Unknown QRM on 145.680

i'd request you all to monitor the band whenever possible from yr QTH
and maintain a log of QRM found like Freq : Date & Time : Signal Report : Identification marks like name of the owner,
his LL no., location etc. of the Cordless phone user
(e.g. - 144.90 - 12FEB'2001 : 11.25pm - 5/9 - Azimbhai from Dahisar and the same signal was heard
by VU2UGJ at Andheri with a 5/9 report)

here is a small freeware program (189kb)
http://groups.yahoo.com/group/m_a_r_s/files/VoxRecorder.zip
which allows recording sound from your Transceiver when an audio signal is present
(for this you need to give yr Transceiver's audio output to soundcard's LINE IN or MIC);

the main purpose this program is to avoid the recording of the silence.
and with help of this one can record only the QRM (in WAV format).

if you can record DTMF tones, those can be decoded with VU2IIA's help.

you can send yr feedback/log to me directly on my e-mail ID i.e. sandipadiwarekar@...

73s,
de VU2UGO

==>LF-TO-LF TRANSATLANTIC AMATEUR CONTACT IS HISTORY

Amateur Radio history was made this month when amateurs in Canada and the UK completed what appears to be the first two-way transatlantic Amateur Radio exchange on 136 kHz. Larry Kayser, VA3LK, and Lawrence "Laurie" Mayhead, G3AQC, managed the LF feat using extremely slow CW that featured 90-second-long dits and 180-second-long dahs. The two-way contact took two weeks to complete.

"We are the first to do a two-way QSO on LF across the North Atlantic as far as I am concerned," Kayser said. "We are the ones who put the stakes in the ground; others will build on what we have done."

The VA3LK-G3AQC contact began February 5 and was completed February 19 with the reception and confirmation of VA3LK's report by G3AQC. Kayser said the participants agreed in advance to a "firewall" between them for the duration of the contact and that all QSO information was exchanged over the LF radio link.

Mayhead said it was clear from the outset that, because of the relatively short band openings, he and Kayser would have to spread the contact out over several days. "It was not easy," he said. "I stayed up late most nights--3 AM on one occasion--changed blown fuses in my transmitter six times, and reconfigured my receiver to include a narrow filter because of interference that was desensitizing it." Kayser says he once had to climb the tower supporting his wire antenna in total darkness.

The UK has authorized amateur operation on 136 kHz, with special authorization and strict limits on radiated power. While Canada has not yet authorized general Amateur Radio operation on 136 kHz, Kayser and a few other Canadian amateurs have received special authorization to experiment there.

Reception of weak LF signals typically is done using spectrographic software like ARGO or Spectran. Signals are transmitted using dual-frequency CW--or DFCW--or very slow-speed CW, also known as "QRSS." Using their particular brand of QRSS, Kayser calculated that it took nearly 70 minutes for him to send his call sign. "Certainly the information rate will improve," he said. "We did the best we could with what we had to work with over the last two weeks."

G3AQC and VA3LK were using a combination of commercial and surplus equipment at their respective stations. G3AQC estimated his effective radiated power at 350 mW, while VA3LK said he might have been at the 5 W ERP level.

In October 1998, the ARRL petitioned the FCC to create two amateur LF allocations at 135.7-137.8 kHz and 160-190 kHz. The FCC has not yet acted on the request.

==>WWV SURVEY PLANNED

The National Institute of Standards and Technology plans to survey users of WWV and WWVH later this year. The time and frequency-standard stations have been airing occasional announcements about the upcoming poll in order to start building a mailing list of survey recipients. The announcements state that NIST "is seeking information on how listeners use the broadcast services offered on the WWV broadcast," but the survey will not begin for at least several weeks.

WWV Station Manager John Lowe says the announcements are being broadcast now as a heads up and to encourage early mailing list signups. The survey itself will not be released until approved by the Office of Management and Budget,

Lowe said, and he doesn't expect that to happen until May, although it could be sooner. The survey period likely would extend through the summer, he said.

According to Lowe, the last WWV-WWVH user survey was done in 1985. "We just don't know who our user base is anymore," he said. Lowe confirmed that the data collected ultimately could be used to determine whether WWV and WWVH remain on the air--especially given the popularity of NIST's other outlets, including its Web-based time server that gets in excess of 3 million hits a day.

"If we get only two people who say they're using WWV, then we've got a problem," he said. Lowe added that he does not think WWV and WWV will be shut down, and he vowed to "fight for the radio stations," if it came down to that. "But the ultimate decision is not in my hands," he said. "We have to look at our budget and our users."

Lowe strongly encouraged WWV users to get on the mailing list and to send in a survey when the time comes. He suggested, however, that more weight will be given to survey responses from corporate and institutional users of the radio service as opposed to individual users.

To be added to the NIST WWV-WWVH survey mailing list, send your name and postal address to the NIST Radio Station WWV, 2000 E County Road 58, Ft Collins, CO 80524, or e-mail the information to nist.radio@....
Lowe urged WWV-WWVH users to hold their fire until the survey begins.

WWV in Ft Collins, Colorado, and WWVH on Kauai, Hawaii, broadcast continuous time and frequency information to millions of listeners worldwide. For more information, visit the NIST Web site, http://www.nist.gov.

==>CANADIAN YOUNGSTERS SPEAK WITH COMMANDER SHEPHERD ON ARISS QSO

A dozen youngsters at Merivale Public School in Ottawa, Ontario, this week became the first Canadian students to speak with Space Station Alpha Commander William "Shep" Shepherd, KD5GSL, operating from space as NA1SS. The successful Amateur Radio on the International Space Station--or ARISS--school contact February 22 likely will be the last for the Expedition 1 crew.

Amateur Radio coordinator Steve McFarlane, VE3TBD, worked in concert with his wife, Lori--a teacher at the school--to make the contact a reality. Lori McFarlane has been working with youngsters at the school for several weeks in anticipation of the ARISS QSO.

After a few unsuccessful calls, VE3TBD raised NA1SS on the ARISS backup frequency. Youngsters asked Shepherd about trash disposal and recycling aboard the ISS, procedures for dealing with a sick crew member, and what the crew does for exercise.

One fourth grader wondered why building a space station was necessary, given problems with pollution and poverty on Earth. Shepherd had a ready reply. "We live on a planet that's really kind of an island, and it's not going to

last forever," he said. Shepherd said he thinks humans probably will one day need to "go places other than Earth" and that the ISS made possible the research needed to do that.

Shepherd said the crew members all missed their families and friends but he said he gets to talk to his wife via Amateur Radio "every couple of days." He also said he has photos and videos of his family aboard. Responding to another student's question, Shepherd said the crew had exercise equipment aboard, and that exercising was considered essential.

Near the conclusion of the contact, the students on hand hollered "73, Commander Shepherd!" in unison. Looking on in addition to other students and teachers were TV and newspaper reporters. It had been hoped that Canadian Prime Minister Jean Chretien would be able to be on hand, but he was occupied with a visit by British Prime Minister Tony Blair.

The Merivale ARISS contact probably will be the last school QSO for the current crew of Shepherd, Yuri Gidzenko, and Sergei Krikalev, U5MIR. ARISS spokesman Will Marchant, KC6ROL, said he expects it will be sometime in late March--after the Expedition 2 crew arrives--before ARISS school contacts can resume.

For more information on the ARISS program, visit the ARISS Web site, http://ariss.gsfc.nasa.gov.

==>THREE ARRL SECTIONS TO GET NEW SECTION MANAGERS

Three ARRL sections will get new section managers, while incumbents were declared elected in six others. All new terms begin April 1.

The only contested race was in Kentucky, where challenger John D. Meyers, N4GNL, of Butler, outpolled incumbent SM William L. "Bill" Uschan, K4MIS, and another challenger, David W. Glass, WA4QAL. The final tally was 244 votes for Meyers, 236 for Uschan, and 137 for Glass. Ballots were counted February 20 at ARRL Headquarters.

In Arkansas, Bob Ideker, WB5VUH, of Little Rock ran unopposed and was declared elected to succeed Roger Gray, N5QS. Gray decided not to seek another term. In North Texas, Larry Melby, KA5TXL, of Dallas--appointed to take over the reins from Donald Mathis, KB5YAM, on March 1--ran unopposed and was declared elected to a full term in his own right.

Incumbent section managers were re-elected without opposition in six other ARRL sections. They include Cliff Hauser, KD6XH, Arizona; Jim Lasley, N0JL, Iowa; Randy "Max" Wendel, KM0D, Minnesota; Malcolm Keown, W5XX, Mississippi; Joe H. Brown, W6UBQ, Orange, and Robert Williams, N7LKH, Wyoming. Wendel agreed to run again last year when no other candidates came forward, and he has remained in office in the interim. As a result, his term will run through September of next year.

In Montana, a resolicitation for candidates will be announced in April QST. Incumbent Darrell Thomas, N7KOR, will remain in office at least through September.

==>MAINE LAWMAKERS KILL MOBILE HAND-HELD DEVICES BILL

A Maine legislative committee has killed a bill that would have made it illegal to use hand-held electronic devices such as cellphones and two-way radios while driving. ARRL State Government Liaison Zane Keeler, AA1WV, reports the Joint Standing Committee on Transportation on February 21 reported out an ought-not-to-pass recommendation for LD 95.

The bill would have restricted the use of hand-held cellular telephones as well as "computers, Citizens Band radios, dictaphones, microphones and other electronic devices" not essential to the operation of a vehicle on Maine's highways.

The same legislative panel also turned away a similar, but less restrictive bill, LD 102. Both bills would have permitted the use of hands-free accessories for cellular telephones used on the road.

The committee's vote on both bills was 7-1. Keeler said both bills are dead for the current session. Those opposing the bill included several Maine Amateur Radio operators, cellular telephone providers, emergency medical service providers, and the American Automobile Association. The state Highway Safety Bureau took "a neutral position" on the measures.

Several hams, including Maine Section Manager Bill Woodhead, N1KAT, were on hand February 12 for a public hearing before the legislature's Transportation Committee. Keeler said a half-dozen Maine hams showed up for the February 21 legislative workshop.

In Maryland, a bill to ban the use of hand-held cellular telephones while driving was killed February 15 by a House of Delegates committee on a 14-7 vote. Several other states are considering similar measures. While no states have banned cellular telephone use altogether, California, Florida and Massachusetts impose some restrictions on their use. Nearly 40 states have considered such legislation since 1995. Five municipalities require drivers to use hands-free technology within their borders.

==>SOLAR UPDATE

Heliophile Tad Cook, K7VVV, Seattle, Washington, reports: The sun continues to be quiet, and this really looks like a significant decline in activity. Average daily sunspot numbers for the first and second weeks of this month were 149.1 and 143.7, and it was 124.1 for this past week. The average solar flux for each of those same weeks also declined. It was 164.9, 150.7 and 136.1.

Solar flux last Friday was 129.6. Flux values have not been this low since May 6, 2000, when the flux was 126.8, and on January 29, 2000 when it was 127.7. If the peak in the cycle was in mid-2000, then these numbers possibly were on the other side of the cycle peak.

The forecast for the next few days shows solar flux values of 150 for Friday and Saturday and 145 for Sunday and Monday. Planetary A index is predicted to be a very quiet five on all of those days. Solar flux is expected to dip again to around 135 on the last day of this month--next Wednesday--then rise

to around 165 for the first week of March.

We are about a month away from the spring equinox, when some of the best seasonal HF conditions prevail. Look for 20-meter openings later into the evening. Ten meters will probably be good for only another two months or so, so now through the equinox is probably the best time to work that band.

Sunspot numbers for February 15 through 21 were 113, 133, 95, 143, 147, 119 and 119 with a mean of 124.1. The 10.7-cm flux was 135.1, 129.6, 129.8, 132, 137, 145.5 and 143.6, with a mean of 136.1. Estimated planetary A indices were 5, 3, 3, 4, 6, 8 and 6 with a mean of 5.

==>IN BRIEF:

* This weekend on the radio: The CQ WW 160-Meter SSB Contest, the REF French Contest (SSB), the UBA Contest (CW), the RSGB 7 MHz Contest, the CQC Winter QRP QSO Party, and the North Carolina QSO Party are the weekend of February 23-25. JUST AHEAD: the ARRL International DX Contest (SSB) is March 3-4 (see December 2000 QST, page 110 for rules). See the ARRL Contest Branch page, http://www.arrl.org/contests/ for more info.

* Clarification: A story in The ARRL Letter, Vol 20, No 7, FCC Queries Wireless 'Net Provider About Interference To Hams, quoted an FCC enforcement letter to the effect that Darwin Networks' Part 15 devices "apparently were installed in the apartment complex to provide Internet service using wireless 2.4 GHz nodes by Cisco Systems Inc." FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth said his inquiry letter was not intended to suggest any defective operation on the part of the Cisco Systems nodes. "This inquiry was directed at Darwin Networks," he said. "The mention of the node manufacturer was incidental to the inquiry and was never intended to suggest that Cisco Systems equipment was faulty or that the company is part of this FCC inquiry."

* RTTY signal in AM window being investigated: In its periodic report to the FCC Notifications Branch, The ARRL Monitoring System has asked the FCC to help identify the source of a RTTY transmission near 3.885 MHz, the 75-meter AM calling frequency. "We received numerous reports of this signal from AM enthusiasts on February 22," said Monitoring System Administrator Brennan Price, N4QX. "We have asked the FCC HF Direction Finding Facility in Maryland to determine the origin of the signal." Price said this was the first step in resolving the situation, but he notes that the signal may not be illegal. "US hams are fortunate to have access to 3800 to 4000 kHz," he said. "In many countries, this segment is used by a variety of fixed, mobile, and broadcasting services." He said that if the RTTY transmission is not coming from the US, it may be legal in its country of origin. "In that case, any resolution will have to be achieved through negotiation rather than through enforcement," he said.

* ARRL Emergency Communications on-line course again fills up fast: The ARRL course, Introduction to Emergency Communications, was fully subscribed

within 72 hours of the opening announcement earlier this week. A ham in Italy has been added to the growing list of foreign students "attending" this on-line course. Plans call for offering a new course every four weeks, and a "live" classroom version of the course is now in beta testing. For more information on this on-line course, visit the ARRL Certification and Continuing Education page, http://www.arrl.org/cce .

* ARRL seeks RFI/EMC specialist: The ARRL Laboratory has a job opening for an RFI/EMC specialist. The successful candidate will work at ARRL Headquarters in Newington, Connecticut, on a variety of technical projects and programs relating to radio frequency interference and its effect on the Amateur Radio service. An Amateur Radio license and experience is required for this position. This job is a unique opportunity to work with ARRL members, the FCC, industry groups and standards organizations to make a real difference in this critical area for Amateur Radio. Some additional duties of this position are: Work with amateurs to find solutions to RFI problems; maintain and improve ARRL's RFI information; write articles, book material and papers about RFI; and develop and maintain a database for tracking and documenting RFI problems. The ideal candidate will have one or more of the following qualifications or experience: Experience in EMC engineering at the design, system or field level EMC testing or field measurements; RFI troubleshooting and debugging; authoring published papers, articles or reports related to EMC; experience with industry committees and/or standards organizations; BSEE or equivalent degree or experience. To be considered for this position, send a resume and salary expectations to Bob Boucher, Personnel Manager, ARRL, 225 Main St, Newington, CT 06111. Resumes can be accepted by e-mail at rboucher@.... No telephone calls, please. ARRL is an equal opportunity employer. For information on other ARRL openings, visit the "Employment at ARRL" page, http://www.arrl.org/annnounce/jobs.

* China team to compete in first USA ARDF Championships: The Chinese Radio Sports Association has announced that it plans to send a team to the first USA ARDF Championships to be held in Albuquerque, New Mexico, July 31 through August 4. The USA ARDF Championships invite all ARDF enthusiasts, at any skill level, from any country. ARRL ARDF Coordinator Joe Moell, K0OV, says registration is now open, and a 10% discount is offered to those who register before March 1. For more information on the event, sponsored by the Albuquerque Amateur Radio Club, visit http://groups.yahoo.com/group/abqardf/files/web/index.html . For more information on Amateur Radio Direction Finding, visit Moell's ARDF Web site, http://www.homingin.com .--Joe Moell K0OV USA ARDF Coordinator

* D68C DXpedition at 126,000 Qs and counting: The D68C DXpedition to Comoros reports logging more than 4650 QSOs in the recent ARRL International DX Contest (CW), probably topping the current the Africa multi-two record by a significant margin. D68C has been active on 30, 17 and 12 meters as well as on 14 and 28 MHz RTTY and PSK31. The D68C will not do any satellite operation, as originally planned. The team reports occasional high noise levels on the lower bands. "We are working all we can hear. Sometimes it is really hard to hear anything at all with all the static," said John Linford, G3WGV. As of February 20, the team had 126,000 QSOs in the log, and Linford

said he anticipates when all is said and done, the D68C operation will hold several new records, including total number of QSOs.--John Linford, G3WGV

* Jack R. Carter, KC6WYX, SK: Jack Carter, KC6WYX, of Rancho Palos Verdes, California, died February 20. He was 71. An ARRL member, Carter served as executive officer of the World War II Tank Landing Ship LST-325, which recently completed a 4200-mile journey from the Greek island of Crete to Mobile, Alabama, and gained extensive news coverage en route. Carter had ham radio gear aboard and used the WW2LST call sign of the USS LST Amateur Radio Club while under way. According to a report in Stars and Stripes, 29 sailors--men in their 60s, 70s and older--signed on to deliver the ship to a permanent berth to be used as a floating museum. Most of the sailors were US Navy retirees. Carter, an electrical engineer, was past president of the Palos Verdes Amateur Radio Club. For details of Carter's "voyage of a lifetime," photos of the voyage, and information on the PVARC, visit the club's Web site, http://palosverdes.com/pvarc/index.htm .

* New chair appointed for NTS Eastern Area staff: Marcia Forde, KW1U, has been appointed as chair of the Eastern Area Staff of the ARRL National Traffic System. From Edgartown, Massachusetts, Forde was nominated by fellow Eastern Area staff members for the two-year term. She continues as Transcontinental Corps director for Cycle 2, a position that she has held since 1984. A member of the ARRL for 19 years she also holds Official Relay Station and Official Emergency Station appointments in the League's field organization.

* QCWA honors Bob Baird, W9NN: Some 30 hams and friends gathered February 17 in Mosinee, Wisconsin, to honor and recognize a ham of 80 years, Bob Baird, W9NN. Baird, who turned 95 February 18, was one of the founding fathers of the Quarter Century Wireless Association in 1947. He also founded the W9DXCC gathering, which attracts hundreds of hams, DXers and DX each year. In his younger years, Baird was an engineer for WGN Radio, Chicago. He still frequents HF CW.--Badger State Smoke Signals

* Vote on QST Cover Plaque Award: The winner of the QST Cover Plaque Award for January was Murray Greenman, ZL1BPU, for his article "MFSK for the New Millennium." The winner of the February award was Larry Scheff, W4QEJ, for his article "How to Maximize Your Receiver's Effective Selectivity" (Part 1). Congratulations, Murray and Larry! ARRL members are reminded that the winner of the QST Cover Plaque award--given to the author(s) of the best article in each issue--is determined by a vote of ARRL members. Voting takes place each month on the ARRL Members Only Web site at http://www.arrl.org/members-only/qstvote.html. As soon as your copy arrives, cast a ballot for your choice as the favorite article in the March issue of QST. Voting ends March 15.

* World Amateur Radio Day set for April 18: The Administrative Council of the International Amateur Radio Union has selected the theme "Providing Disaster Communications: Amateur Radio in the 21st Century" for World Amateur Radio Day, April 18, 2001. IARU has been the watchdog and spokesman for the world Amateur Radio community since its founding in Paris, France,

in 1925. Hiram Percy Maxim, 1AW, was its first president. In a related item, the International Telecommunication Union has approved publication of the Disaster Communications Handbook for Developing Countries. The role of the Amateur Radio service in disaster communications is one of the main points of the Handbook. IARU is the principal contributor to the Handbook. This event will coincide with the 76th anniversary of the founding of the IARU.--Fred Johnson ZL2AMJ/IARU Region 3

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

To leave letter-list, send mailto:majordomo@...
with the BODY of the message containing:

==>AMATEUR RADIO MOUNTS QUICK QUAKE RESPONSE

Hams responded within minutes after an earthquake hit the Seattle area the morning of February 28. The epicenter was some 35 miles southwest of Seattle, but the quake was felt as far away as Salt Lake City. Washington Gov Gary Locke declared a state of emergency for western Washington.

As of week's end, Amateur Radio had scaled back its response as power and telephone service returned to the stricken region. Amateur Radio Emergency Service (ARES) and Radio Amateur Civil Emergency Service (RACES) teams in the quake zone were mobilized within minutes of the event. The Salvation

Army Team Emergency Radio Network (SATERN) and the Military Affiliate Radio System (MARS) also activated.

Residents in the affected region now are picking up the pieces. Damage estimates could top $2 billion. Upwards of 350 injuries--a few of them serious enough to require hospitalization--were reported, but no deaths were directly attributed to the earthquake.

ARRL Western Washington Section Manager Harry Lewis, W7JWJ, reported that very soon after the quake struck, State RACES Officer Jim Sutton, WA7PHD, was on the air, handling net control duties for the Washington State Emergency Net on 75 meters from the State Emergency Operations Center at Camp Murray. Western Washington Section Nets also activated on HF SSB, and in the Seattle area, ARES volunteers had mounted an emergency repeater net with King County EC Rich Hodges, KB7TBF, and Lt. Russ Reed, N7NOV, of the US Coast Guard sharing NCS chores. Several other county ARES nets took to the air.

Amateur Radio operators also set up a temporary 2-meter net to assist the Red Cross with damage assessment. An unconfirmed report says one ham used an ATV link from a helicopter to the State EOC--where Gov Locke was on hand--to survey the damage below.

While Eastern Washington was not as badly affected, Spokane County ARES/RACES activated to assist. Because the Spokane County Department of Emergency Management had trouble maintaining contact with the State EOC at Camp Murray, an auxiliary cross-state link was established via the Washington Emergency Net. "This HF link was maintained by Spokane County's off-site Official Emergency Stations, communicating with operators at the County EOC by 2 meters," said Spokane County EC Nathan Jeffries, KI7QT, who said the action drew later praise from a County emergency official.

Eastern Washington SM Kyle Pugh, KA7CSP, said "a loose information net" also fired up on 40 meters to handle general inquiries and health-and-welfare traffic.

The Alaska Pacific Emergency Preparedness Net also took the airwaves on 20 meters (14.292 MHz). "The net was opened within minutes of the quake, and hundreds of messages were passed," said Bob Baker, NL7UH, in Anchorage, Alaska. Baker praised net participants for their "very highly professional manner. The net was formed after the 1964 Alaska earthquake, and it includes several net control stations in Alaska and in the "Lower 48."

The SATERN Net activated for about six hours on 20 meters (14.265 MHz), processing health-and-welfare information requests and handing out situation reports from Washington and Oregon amateur stations. "Scores of stations over the nation assisted in relay," said National SATERN Director Pat McPherson, WW9E. SATERN's Web site, www.go.to/satern , remains available for inquiries.

Lewis said he was "deeply impressed" by the speedy amateur response.

==>A GLIMMER OF GOOD NEWS FOR AO-40

AMSAT reports that the sun began triggering AO-40's sun sensor as the satellite emerged from Earth's shadow on orbit 147. The news has boosted ground controllers' optimism that they might be able to regain control over the satellite's spin rate and attitude sooner than had been predicted.

AMSAT-DL's Peter Guelzow, DB2OS, said this week that as soon as the sensor unit delivers good sun sensor data, controllers will be able to reduce AO-40's spin and make it easier to adjust attitude. "This also will lead to an improvement in reception of the S-Band telemetry," he said.

For the past few weeks, the AO-40 has remained in what AMSAT called "a semi-hibernation state," because the satellite's high angle has prevented the sensor from seeing the sun's light. Controllers had planned to work around the sun sensor issue by using a software routine.

Once ground controllers can get accurate AO-40 attitude data, they should be able to correctly aim AO-40's high-gain antennas for optimal reception on Earth. Ground controllers have been relying on telemetry from AO-40's S-band (2.4 GHz) downlink--the only transmitter now operating--but they are holding out hope that at least some of the satellite's other transmitters still function. Since the satellite went silent for about two weeks in December, ground controllers have had no luck hearing the 2-meter, 70-cm or 1.2 GHz transmitters using AO-40's omnidirectional antennas.

The next major step will be to bring AO-40 into an orientation where ground controllers can fire the onboard arc-jet thruster--using only gaseous ammonia and no electrical power. The test firing will allow checking out the guidance electronics and the arc-jet valves. Guelzow said the thrust of the test will be enough to lift the satellite's perigee by about 100 km.

Guelzow said plans call for optimizing the current orbit with a live arc-jet firing. He said that several independent analyses--including one done by the French space agency, CNES--confirm that the current orbit will be stable for many years--longer than the spacecraft's anticipated lifetime.

For more information, visit the AMSAT-NA Web site, http://www.amsat.org.

==>FCC LAUNCHES REVIEW OF LA AREA REPEATER

The FCC has launched a review into the operation of the W6NUT repeater in the Los Angeles area. The repeater, which has attracted a following of what some observers call "nontraditional" amateur users, also was said to have been radio home of Richard Burton, ex-WB6JAC, sentenced earlier this year to prison for unlicensed operation.

"We've gotten more complaints about that repeater than any other repeater in the country, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth said of the W6NUT machine, which operates on 147.435 MHz. "If there's a control operator, we sure haven't seen any evidence of it."

Hollingsworth wrote the repeater's trustee, Kathryn Tucker, AA6TK, and two W6NUT users regarding lengthy broadcasts made over the repeater in early

February. Hollingsworth told Tucker that the FCC has received complaints that control operators and the repeater licensee "fail to address long periods of jamming by users, broadcasting, music playing as well as a plethora of other violations."

He cited one transmission of more than two hours on the evening of February 1-2 that included music and commentaries on many of the songs. A similar lengthy broadcast aired over W6NUT a few evenings later, he said. Both transmissions repeatedly timed out the repeater, Hollingsworth said, and there was no evidence that a control operator was present at any time.

In separate letters to Technician licensees Ted R. Sorensen III, KC6PQW, and Gregory S. Cook, KC6USO, Hollingsworth cited monitoring information alleging that Sorenson actually transmitted both broadcasts. On the first occasion, on February 1-2, Sorenson is said to have acted in concert with Cook, who was hooked in via phone patch. The second similar transmission February 4-5 was said to have featured only Cook, again via phone patch to Sorenson's transmitter, Hollingsworth said.

Citing Sec 308(b) of the Communications Act of 1934, Hollingsworth requested that all three licensees respond to the allegations within 20 days. In addition, Hollingsworth asked Tucker to furnish specific details about the W6NUT repeater system, including names of control operators on duty on the two evenings in question.

Cook's license is due to expire May 7, 2001. Hollingsworth advised Cook that his renewal application would "not be routinely granted unless these issues are resolved" and that his renewal application could wind up being designated for hearing.

==>SPACE STATION SHIFT CHANGE SET WITH NEXT SHUTTLE LAUNCH

It's almost time for a shift change aboard the International Space Station, and two hams are among the new crew members. Relieving the current ISS crew will be the Expedition 2 team of Commander Yuri Usachev, UA9AD/R3MIR, of Russia and US astronauts Susan Helms, KC7NHZ, and Jim Voss. The Expedition 2 crew is scheduled to head into space March 8 aboard the space shuttle Discovery. The Expedition 1 crew has spent more than four months in orbit.

The Space Station Alpha crew is staying in space a couple of weeks longer than planned because of a tight shuttle launch schedule and necessary refitting on the Discovery. Expedition 1 Commander William "Shep" Shepherd, KD5GSL, and Russian cosmonauts Yuri Gidzenko and Sergei Krikalev, U5MIR, arrived at the station November 2. During their stay, Shepherd has spoken via ham radio with students at several schools as part of the Amateur Radio on the International Space Station--or ARISS--program.

In addition to ferrying the Expedition 2 crew, Discovery will have in tow an Italian-made cargo carrier that's filled with laboratory experiments and equipment. At the end of its almost 12-day flight, Discovery will transport Shepherd, Gidzenko and Krikalev back to Earth. Discovery is planned to land March 20 at NASA's Kennedy Space Center in Florida.

Commanding Discovery will be Jim Wetherbee. Jim Kelly, KC5ZSW, will be the shuttle's pilot, and Andy Thomas, KD5CHF--a Mir veteran--and Paul Richards, KC5ZSZ, will serve as mission specialists. No Amateur Radio activity from the shuttle is scheduled.

==>LEAGUE SEEKS GREATER FLEXIBILITY AT 219-220 MHz

The ARRL is urging the FCC to retain the 219-220 MHz shared Amateur Radio allocation and says it wants the Commission to make it a bit easier for hams to use the segment. In comments filed February 6 in an FCC rulemaking proceeding, the ARRL said it believes the 219-220 MHz band "must be maintained and enhanced."

The League commented in PR Docket 92-257, released last November. The Third Further Notice in that proceeding proposed to designate licensing regions for the Automated Maritime Telecommunications System (AMTS) facilities at 216-220 MHz and to authorize a single licensee for each unassigned AMTS frequency block on a geographic basis. The current AMTS system uses a site-based licensing structure.

Current rules require that amateurs planning to operate within 80 km (50 miles) of an AMTS facility get written permission from the AMTS licensee, but getting that consent has been difficult to impossible for hams in coastal areas. "The Commission's intended flexibility in amateur station operation at 219-220 MHz has not, in general, been realized," the League commented.

The ARRL suggested letting amateurs seeking to use 219-220 MHz submit computer-generated field strength contours that demonstrate a lack of interference potential at the relevant AMTS boundaries in lieu of having to get written permission.

"It is ARRL's intention that the Amateur Service be provided a practical opportunity to make substantial, flexible use on a secondary basis of the 219-220 MHz allocation, taking into account expanded development of AMTS stations," the League said. The FCC should "provide some flexibility in the engineering of amateur systems in that band, to the extent consistent with avoidance of interference to AMTS stations."

The 219-220 MHz amateur segment was created in 1995 as a result of an ARRL petition for rulemaking. The FCC has designated the band on a secondary basis for amateur fixed point-to-point digital message forwarding systems.

While the ARRL said it's unaware of any amateur interference to AMTS stations, attempts by hams to use the band to construct digital backbone systems "have been largely thwarted to date" because on the inability to get consent from AMTS licensees within 50 miles of the proposed operation, as rules now require.

A copy of the ARRL's comments is available at www.arrl.org/announce/regulatory/pr92-257/.

==>HIKING HAMS CLAIM PEDESTRIAN MOBILE DISTANCE RECORD

Bonnie Crystal, KQ6XA, of San Mateo, California, and Max Pompe, ZL1BK, of Auckland, New Zealand, are claiming the record for the longest direct-path, pedestrian-to-pedestrian Amateur Radio contact. The two worked each other February 18 on 10 meters using compact SSB transceivers and homemade antennas.

On the New Zealand end, ZL1BK used a 1.8-meter (5 feet 11 inches) homebrew telescopic whip mounted on his Yaesu FT-817 running 5 W. Crystal had a 6-meter (19 feet 8 inches) fishing pole strapped to an aluminum pack frame and ran 20 W using a Vertex/Standard VX-1200 HF Manpack transceiver, a radio that's not marketed in the US. "Both of us used 3-meter insulated-wire dragging counterpoises," said Crystal.

The 6500-mile contact began on 15 meters but ended on 10, because conditions were better there for that path. "Other stations in the HFpack group here in the US had been trying to make a go of it, but we just lucked out," Crystal said.

For his part, ZL1BK said, "I still can hardly believe we did it, but the Pacific gods smiles on us as we rode the airwaves today."

The HFpack Web site has more information at http://groups.yahoo.com/group/hfpack/ . More information on Bonnie Crystal, KQ6XA, is available on her Web site, http://www.qsl.net/kq6xa/.

==>CALL BOOK COLLECTION DONATED TO ARRL HEADQUARTERS

Amateurs are known to be collectors, but Al Hall, W9IVA, who became a Silent Key last year at the age of 93, was the collector's collector! Not only did he collect radio gear but also Call Books dating back to the 1940s and other call sign directories going back even further. Now, his collection has been donated to ARRL Headquarters by the ham who inherited it.

A longtime resident of Madison, Wisconsin, and an ARRL member at the time of his death, Hall left his Call Book collection to Jim Green, KG9MM, who donated and shipped the entire collection to ARRL Headquarters last month. The volumes will augment the League's Call Book and call sign directory collection, and some of the books will replace directories that have deteriorated with age or become dog-eared through use.

Green said Hall--who first used the call of 9BOX at the age of 12 around 1920--"still had his first rig, his last rig, and according to him, every rig in between." Hall's equipment now is on display in a private museum in Madison, Wisconsin, he said.

The Hall Call Book collection now is archived in the Field and Educational Services offices at League Headquarters. ARRL Regulatory Information Specialist John Hennessee, N1KB, maintains the small, but expanded, library. He says the League now has 165 call sign directories in its archive, including a complete Call Book collection from the late 1940s. Some gaps remain between 1932 and 1955, however.

Hennessee said the ARRL invites donations of needed Call Books to the ARRL collection. Contact Hennessee at 860-594-0236 or by e-mail at n1kb@....

He asks that donors not ship books but check with him first to ensure that a particular edition is needed.

In addition to its historical significance, the collection of directories also is in demand for research purposes.

==>SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: Greetings from Seattle, where we just lived through an exciting earthquake on Wednesday. No damage at K7VVV, but it has had everyone a bit rattled.

Average sunspot numbers were lower last week, but average solar flux was about the same, when compared to the previous week. Sunspot numbers were down to 88 on Wednesday, the lowest since January 17. Average daily solar flux for the months of December, January and February were 173.6, 166.6 and 147.2, indicating a decline in activity. Average sunspots over the same period were 146, 143 and 131.

The next short term peak in activity is expected around March 8, with a solar flux of 155. Predicted flux values for the next few days, Friday through Monday, are 135, 140, 145 and 150. Moderate geomagnetic conditions are expected for the ARRL International DX Phone Contest this weekend, with planetary A index of 12 on Saturday and 10 on Sunday. This estimate is based on the 80 percent chance that a full halo coronal mass ejection Thursday will not have a large effect on Earth.

We are moving toward spring conditions, which means better DX openings between the northern and southern hemispheres. Watch for the upper HF spectrum to open toward the east and south early in the day, then peak north and south in mid day, and then toward the west and south toward the evening.

Sunspot numbers for February 22 through 28 were 135, 135, 99, 111, 91, 90 and 88 with a mean of 107. The 10.7-cm flux was 145.8, 145.2, 137.3, 134.9, 135.4, 130.6 and 131.8, with a mean of 137.3. Estimated planetary A indices were 6, 11, 5, 3, 10, 13 and 7 with a mean of 7.9.

==>IN BRIEF:

* This weekend on the radio: The ARRL International DX Contest (SSB) is March 3-4 (see December 2000 QST, page 110 for rules). JUST AHEAD: The North American Sprint (RTTY) and the Wisconsin QSO Party are the weekend of March 9-11. See the ARRL Contest Branch page, http://www.arrl.org/contests/ for more info.

* ARRL seeks articles for Antenna Compendium: ARRL is looking for original, unpublished articles for the next volume of the extremely popular book series The ARRL Antenna Compendium. Articles should be about antennas, propagation, transmission lines, antenna tuners, towers--anything dealing with antennas! Submit articles to Dean Straw, N6BV, c/o ARRL HQ, 225 Main St, Newington, CT 06111.

* ARRL DXCC Desk approves ST0P operation for credit: Last summer's ST0P DXpedition by Jeff Hambleton, G4KIB/5B4YY/KF9BI, in Khartoum, Sudan, has been approved for DXCC credit. The DXCC Desk has reviewed and accepted ST0P documentation, and stations now can now receive DXCC credit for ST0P. Rejected ST0P submittals can be updated without having to re-submit a QSL by contacting the DXCC Desk, dxcc@.... QSL information for ST0P is on the Web at http://www.qsl.net/st0p.

* Tristani poised to exit FCC: FCC member Gloria Tristani reportedly will join three present and former colleagues in exiting the Commission. According to Dow Jones Newswires, Tristani will leave the FCC by the end of the year, possibly to pursue elective office in her home state of New Mexico. Nominated to the Commission by President Clinton, Tristani joined the FCC in 1997. Her term expires June 30, 2003. Tristani, a Democrat, joins former FCC Chairman William Kennard--who left the FCC January 19 and was replaced by Commissioner Michael Powell--and commissioners Harold Furchtgott-Roth, a Republican, and Susan Ness, a Democrat, who plan to leave but remain on the FCC for now.

* Taroh Yagi, JH1WIX, SK: Well-known JA DXer and Amateur Radio pioneer Taroh Yagi, JH1WIX (ex-J1DO, J2GX) died January 29. He was 93. First licensed in 1924, Yagi, often was the first JA contact for many new hams. Among the founding members of the original JARL, founded in 1926, Yagi in his later years made most of his contacts on CW and spent a lot of time on the 15-meter Novice band handing out JA to newcomers. Bill Acito, W1PA, remembers when he first worked JH1WIX. "I was 15, with an NC300 receiver and a Heath DX-60 transmitter, and tried patiently to work him over several nights," he wrote. "When I finally did, I think I was more excited than when I made my first QSO." ARRL Membership Services Manager Wayne Mills, N7NG, said he remembered Yagi very well, but for a different reason. "For some reason he remembered my name--"Wyne"--many, many times when I worked him in a contest. He never forgot, and he misspelled my name each time. I will miss him." Yagi has belonged to ARRL, JARL, QCWA, FOC and the Tokyo Old Timers Club.--thanks to Bernie McClenny, W3UR; Bill Acito, W1PA

* Jack Carter, KC6WYX, SK, to be buried at sea: A memorial service for Jack Carter, KC6WYX, was held March 1 and burial was expected to be at sea from a US Navy vessel. Carter died February 20. He was the executive officer of the World War II Tank Landing Ship LST-325, which recently completed a 4200-mile journey from the Greek island of Crete to Mobile, Alabama, where it will become a museum. Carter had ham radio gear aboard and used the WW2LST call sign of the USS LST Amateur Radio Club while under way. The family invites memorial donations to the American Cancer Society. The Palos Verdes Amateur Radio Club has assumed QSL responsibility for contacts Jack Carter made during his WW2LST/MM voyage.--Herb Clarkson, KM6DD/PVARC

* QRP EME QSO reported: A posting on the EME reflector reports that Ernie Manly, W7LHL, and Larry Liljequist, W7SZ, both in Washington, successfully completed an Earth-Moon-Earth (moonbounce) contact February 25 while running 5 W on 1296 MHz. "This was using the PUA43 mode with their DSP-10 transceivers and transverters," said Bob Larkin, W7PUA. This marked their first attempt at using the 5-W level for a QSO. The DSP-10 was a QST

construction project by Larkin that appeared in three parts in the September, October and November 1999 issues of QST. The antennas for the QRP contact consisted of 10 and 12-foot TVRO-type dishes. Details are available at Larkin's Web site, http://www.proaxis.com/~boblark/dsp10.htm .

* New BVI QSL Bureau address: The British Virgin Islands has a new QSL Bureau address effective immediately. It's BVI QSL Bureau, PO Box 4, West End, British Virgin Islands.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

To leave letter-list, send mailto:majordomo@...
with the BODY of the message containing:

MUMBAI AMATEUR RADIO SOCIETY

dear members,

You all must be aware that lately we are experiencing lot of QRM on VHF frequencies. It is due to illegal use of some chinese made long range cordless telephones.

M.A.R.S have officially complaint to W.P.C vide our letter dated 17/01/2001, In response the W.P.C instructed our monitering station at Gorai to take necessary action.

We have also been it constant touch with the monitering station and pressuring them to take action. They have sent their mobile van to search and locate these illegal user, but so far nothing concrete has materialize out of our efforts. We have requested the montering station to give a press release to this effect, which may crub the illegal usage. but still they have not taken the matter seriously.

If this continues then we are sure to loose our VHF band without any doubts. We must take action or there will be no VHF activity.

I therefore appeal to all the members to call the monitering station on telephones numbers 805 6244 / 801 1626 and give your callsign and complaint aleast twice every day for few days, so that they have no choice but to take immediate action.

Mark my words we if don't take action now , we will definately loose our VHF band, Don't say I didn't warn you guys. I am doing my best to change this , question is are you doing anything about it ??

MUMBAI AMATEUR RADIO SOCIETY

dear members,

The monthly meeting for March 2001 will be held at Shishu Vihar School, Dadar(E) on Sunday 11th March 2001 at 10:00 hours.

The agenda for the meeting is as follows :-

1. Callsign for the Society. (Please bring suggestions after refering the call book)
2. Callsign for the Repeater.(Please bring suggestions after refering the call book)
3. Progress report of the Ham Radio Classes.
4. Import of Bulk H.F sets.
5. Nomination forms for the 2nd Managing Committee.
6. anything else with the permission of the chairperson.

Kindly note that this will be the last meeting conducted for this accounting year and probably
the last meeting conducted by the present Managing Committee. So please ensure to attend.

Tea/Coffee and snacks will be served as usual.

Please also note that the Annual General Meeting, Elections for the 2nd Managing Committee and the Annual Dinner of the Society will be held on 1st May 2001. as per schedule without any change. Please keep yourself free on that day.

73s
NLF.

MUMBAI AMATEUR RADIO SOCIETY

dear members,

I am pleased to announce that our member Kiran Padiyar [VU3KPL], who is presently in USA has subscribed to ARRL for the next 2 years on behalf of MARS.

He has also sent us 3 ARRL books

1.The ARRL Satellite Anthology,
2.The ARRL Packet: speed,more speed and application,
3.The ARRL Guide to APRS.

The above contributions from him is deeply appreciated by us. We Thank him for the same.

140. Disaster Communication Management Commitee for all India.

Yahoo group: m_a_r_s
Date: 2001-03-17 04:43:50 UTC
From: vu2nlf
Topic: 140 Message: 140

MUMBAI AMATEUR RADIO SOCIETY

dear members,

Recently Mr. Saad Ali of ARSI called upon us to discuss the plans to form a Disaster Communication Management Committee for all India.

The meeting was attended by Mr. Saad Ali, Mr. Adolf Shepherd, Mr. Nilesh Rathod, Mr. Pankaj Pasad, Mr.Mukesh Jaitley, Mr.Rajen Kavadia and Mr. Huzefa Merchant.

Mr Saad Ali informed that he appreciated all the work done by MARS members during the recent Gujrat Disaster. He said he has discussed the experiences with many participents of the Gujrat Disaster including Nilesh, Huzefa and other hams in India.

It was concluded that lot of hams were working but there was a lack of centralize control during the Disaster . Prem [vu2xmx] and Pravin [vu2cpv] did their best no doubt, but still there is a lot of room for improvement. Co-ordination of ham all over India is a must.

Mr.Saad Ali suggested that to "Set up a Joint Emergency Command, which would consist of all clubs and groups interested in providing emergency services. This Adhoc group of 10 or 12 persons would elect a central coordinator (CC) who should be experienced in handling traffic, who is available at a moments notice and has respect of all major groups"

"The Central Command (JEC) would lay down policies, make programmes for training and plan of action for impelmentation. It would then be the job of the Central Coordinator (CC) to implement these programmes and policies. It may be necessary for small groups in all cities and towns to form core groups to implement the programmes and undertake regular training"

JARL (Japan Amateur Radio League) had offered a lot of equipment to ARSI for Disaster Management. they also wish to impart training to gear up for such disasters.

Mr. Saad Ali Shall be mailing a "Performa for Emergency Services" (a form if you wish to join the emergency service).

Conclusion of MARS:

1. We can either join emergency Service on individul level and form a complete new disaster team which includes all ham (Mars Members and others in Mumbai)and appoint a Control for this team for Mumbai.

2. MARS can join the emergency service and other Non MARS hams can join us during the disaster and other simulated exercises. MARS retains the Control for Mumbai. MARS can further participate in the National Disaster Committee.

I have discussed the above with few of our members. It is suggested that lets not re-invent the wheel , we are already having a good disaster communication team and excellent coordination amongst us. We sould join in as MARS rather then as an individul ham.
That way we can have good coordinaton and control in any situation.

Nevertheless, I request you to kindly give your point of view on this issue at the earliest.
Mr. Saad Ali is conducting a meeting is to be conducted SAT 24th March to discuss the matter. All are invited. But let us decide amongst ourselves first before attending the meeting.

please reply urgently to this mail or contact NLF on 3866312-(R) and 4136636(O).

Dear Team,

In my opinion:

1. We must join, which ever may be capacity in.

2. Joining as MARS would yeild more results than anything else bcos we as team are also attached to each other as very close friends.

3. The decission should be left to individual if he / she wants to be direct or thru MARS part of this National effort.

4. Getting views from the State / Central Govt officials involved in disaster relief about the National Formation, would be good as finaly we all know we are providing service and not making decissions.

5. There should be regional CC and not a single person trying to dominate the scene.

6. Most important lets understand the limitations of HAM Radio and look for other allied services too for better utilisation of this efforts.

More as I think about this.

I missed last one but have my views to share some time with you guys.

Singapore is hectic: working 9:30 AM to (thru the day) 2:00 AM. More as we correspond.

I will be back on 31st March so will be missing the meeting. In any case keep me posted on the decissions / discussions.

142. Re: [m_a_r_s] Digest Number 83

Yahoo group: m_a_r_s
Date: 2001-03-19 04:56:44 UTC
From: vu2nlf
Topic: 141 Message: 142

dear ratnesh,

Thanks for your reply and your valued suggestions.

What we are looking at is a new National Body which has all the Societies and clubs in India as members, The Societies and clubs can be the coordinators at the local level
(City Level or State Level). They can coordinate with the Govt and the NGO's better.

One of the representative from each society or club can be on the New National Body.
and they can elect a CC.

All the local clubs and societies can work in a server and nodes configuration. By joining all these networks we can form a cluster.

Periodical meetings on the Air and simultaneous simulated disaster communication exercise can be conducted to improve coordination amongst all the Societies and clubs
and ofcourse we can always start a egroup for disaster communication and make the best use of Internet.

further suggestions are welcome.

==>HAM RADIO AIDS RESCUE ON THE HIGH SEAS

Amateur Radio operators again have assisted in a high seas rescue operation after pirates attacked a private sailing vessel March 20 off Venezuela. The skipper, identified as Bo Altheden, reportedly was shot, and his female companion, ViVi-Maj Miren, summoned help via the Maritime Mobile Service Net on 20 meters. The victim was reported to be recovering in a Trinidad hospital.

The incident in the Caribbean occurred some 3200 km east-southeast of a similar pirate attack nearly a year ago. In that incident armed marauders shot young Willem van Tuijl from the Netherlands, who was sailing with his

parents.

According to Coast Guard Lt Jose Diaz, KP3J, of the Rescue Coordination Center in San Juan, Puerto Rico, the 44-foot ketch Lorna, of Swedish registry, was enroute to Trinidad and Tobago when pirates attacked some three nautical miles offshore. Altheden was shot once in the abdomen.

The pirates destroyed the VHF radio, so Miren activated an emergency locator transmitter (ELT). The San Juan Rescue Coordination Center received ELT "hits" from the Lorna and notified Venezuelan authorities.

Word arrived at Miami Coast Guard some 90 minutes later from the Maritime Mobile Service Net's Mike Pilgrim, K5MP, of a distress call from a woman on the Lorna on 14.300 MHz. Miami Coast Guard forwarded the information to the San Juan rescue center. Diaz tuned to 14.300, where Bobby Graves, KB5HAV, Dave Dalziel, N4ICE, and Jim Hirschman, K4TCV--a physician who had assisted in the van Tuijl pirate attack last year--already had activated an emergency net. An amateur in Trinidad, Eric Mackie, 9Z4CP, also assisted in communications.

Among those standing by on frequency were Ed Petzolt, K1LNC, in Florida, and Hector Godoy, HR3HGB, in Honduras, both of whom were instrumental in the van Tuijl rescue operation a year ago. The amateurs on 20 meters were able to calm the woman, and Hirschman provided medical counseling.

Diaz got permission from Venezuela to allow a vessel from Trinidad to assist, and a Venezuelan Navy vessel arrived on scene simultaneously with a Trinidad Coast Guard fast boat, with medical personnel. Trinidad medical personnel and crew took control of the sailboat from the shaken and exhausted Miren.

High seas made it too risky to move the victim. Instead, the Swedish sailboat continued on to Trinidad escorted by the Venezuelan Navy vessel and the Trinidad CG cutter.

Diaz credited amateurs with doing "a tremendous job" in helping to keep Miren calm and to relay information for the US Coast Guard to her and for maintaining order on frequency.

"This is what it is all about," Diaz said. "Stay always ready, that others may live."

Pilgrim called the afternoon rescue "one of the most rewarding experiences I have had during my 45 years on ham radio."

==>AMSAT DETAILS LIKELY AO-40 FAILURE SCENARIO

AMSAT-NA President Robin Haighton, VE3FRH, has issued a likely explanation of why AO-40 suddenly went silent in mid-December. Haighton's March 16 statement outlines a three-part failure scenario theorizing that AO-40's problems began with a fault in a helium valve.

"Initial thoughts were that the spacecraft was completely dead and that chances of recovery were remote, with the possibility that AO-40 was in multiple pieces," Haighton said. The satellite's 2-meter beacon quit while ground controllers were testing the onboard 400-newton motor system after anomalies with an orbit-shifting burn that lasted several minutes too long. It was almost two weeks before ground controllers were able to reset the onboard computers and restart a beacon on 2.4 GHz.

Ground controllers have been somewhat successful in regaining control of the next-generation amateur satellite since telemetry transmissions resumed Christmas Day, but Haighton concedes some onboard systems may not be recoverable.

Haighton said that while the Phase 3D team may never know exactly what happened, the likely scenario includes what Haighton told ARRL was "a minor explosion" aboard AO-40, as out-of-place fuel mixed and then ignited as a result of a blocked exhaust port on a helium valve.

"We think it was a human error thing," Haighton conceded in an interview with the ARRL. He did not elaborate.

Ground controllers have used AO-40's magnetorquing system to reduce the satellite's spin rate to around 5 RPM and are optimistic that they'll be able to re-orient the satellite for communication with Earth. The satellite's omnidirectional antennas appear to be lost, but ground controllers hope the high-gain directional antennas still work and that reorienting the spacecraft will bring about a resumption of signals from other transmitters.

AO-40's heat pipe system--which could not work at the higher spin rates--has begun operating again too, considerably reducing internal temperatures. But ground controllers are pessimistic about being able to restore AO-40's 2-meter and 70 cm transmitters.

Yet to be tested is the onboard arc-jet motor, which ground controllers hope to use to reorient the satellite so that the high-gain antennas will face the Earth.

"Following the reorientation it will be possible to test the remaining systems on board the spacecraft and to determine which systems and bands will be available for future operations and under what conditions," Haighton said.

==>QST TO GET NEW EDITOR, PUBLISHER

Steve Ford, WB8IMY, will become the new editor of ARRL's official journal QST effective April 2. Ford, who's now QST managing editor and supervises the magazine's editorial staff, will succeed Mark Wilson, K1RO, as QST editor and Editorial and Production Department manager, ARRL Executive Vice President and CEO David Sumner, K1ZZ, announced today.

Ford said that under his leadership QST will maintain its current editorial direction. "QST has been very successful," he said. "The membership clearly enjoys the magazine, and I don't foresee any changes in the near future."

Wilson, who was designated earlier this year as ARRL's chief operating officer, will become QST publisher, a title Sumner now holds.

Ford, 46, came to ARRL Headquarters in 1991 as an editor on the Book Team, and he is the author of several League publications. He became assistant managing editor of QST in 1993 and managing editor in 1995.

In his new role, Ford will be responsible for the QST and ARRL book editorial teams, as well as production of CD-ROM publications and the graphics and editorial production areas at ARRL Headquarters.

Taking over as QST managing editor and editorial team supervisor will be Book Team Supervisor Joel Kleinman, N1BKE, a 25-year HQ veteran.

"QST is Joel's first love, and we're looking forward to putting his excellent editorial and organizational skills to use there," Sumner said. "We believe that he and Steve will make a great team."

==>ISS EXPEDITION 2 CREW TRIES OUT HAM GEAR; SCHOOL QSOS SET

Expedition 2 crew member Susan Helms, KC7NHZ, had barely settled in aboard the International Space Station when she apparently felt the urge to do a little hamming. Helms, who traveled to the ISS last week aboard the shuttle Discovery with crewmates Yury Usachev, UA9AD--the Expedition 2 commander--and fellow US astronaut Jim Voss--worked a couple of US stations March 18 and 19 and was monitored by another in Australia.

The ham who had snagged the first-ever casual ham contact with the ISS--Randy Shriver, KG3N, of Hanover, Pennsylvania--got lucky again with the Expedition 2 crew. Shriver heard Helms calling CQ early on the morning of March 18 and gave her a call. "Using NA1SS she came back to me," he reports. "I was able to talk to her for 45 seconds." On November 13, Shriver worked Expedition 1 crew commander William Shepherd, KD5GSL.

Samuel Danner, N3MPE, of Smithsburg, Maryland, had his police scanner set to a ISS 2-meter downlink frequency on the off chance he might hear something--and he did. Danner reports he wasn't prepared for the shock of hearing Helms' voice calling CQ. Danner says he ran out to his car, equipped with a scanner programmed with ISS frequencies, to listen further. "It was 29 degrees in the car; I didn't care." he said, adding that he could even see the space station overhead at the time. "It was fantastic!" Danner also was able to make contact with NA1SS.

Gordon Williams, VK6IU, reports that he heard Helms calling while the ISS was over Western Australia on March 18.

Helms likely will handle on-air duties next week when the first Amateur Radio on the International Space Station school contacts for the Expedition 2 crew are scheduled to occur. Students at the John B. Reible School in Santa Rosa, California, are scheduled to speak with the crew March 26 or 27, while students at Vicksburg High School in Mississippi are scheduled for April 4 or April 6.

The Expedition 1 crew of William Shepherd, KD5GSL, Yuri Gidzenko, and Sergei Krikalev, U5MIR, arrived back on Earth this week aboard the Discovery. Usachev, Helms and Voss were reported to be adapting to the new quarters they'll call home for the next four months.

For more information on the ARISS program, visit the ARISS Web site, http://ariss.gsfc.nasa.gov.

==>AMATEUR RADIO SPECTRUM PROTECTION ACT OF 2001 INTRODUCED IN SENATE

The Amateur Radio Spectrum Protection Act of 2001, introduced earlier this month in the US House, now is officially a Senate bill, S.549. Republican Sen Michael Crapo of Idaho introduced the bill in the upper chamber March 15.

Democratic Sen Daniel Akaka of Hawaii was a cosponsor. The bill has been referred to the Senate Commerce, Science, and Transportation Committee. In introducing the Senate measure again this year, Crapo and Akaka referred to the importance of Amateur Radio in providing communication in times of disaster

S.549 is identical in its wording to H.R.817, introduced in the House of Representatives March 1 by Rep Michael Bilirakis of Florida. If approved by both chambers and signed by Pres George W. Bush, the Spectrum Protection Act would require the FCC to provide equivalent replacement spectrum should it ever reallocate primary Amateur Radio spectrum to another service. The same requirement would apply if the FCC acted to diminish any secondary amateur allocations or to make additional allocations in ham bands that diminish their utility.

Bilirakis and Crapo introduced the Spectrum Protection Act in a past session of Congress at the request of the ARRL. The League's Legislative and Public Affairs Manager Steve Mansfield, N1MZA, says he's encouraged by the fact that the Spectrum Protection bill is getting a head start with early introduction in both chambers this time around.

More information on the Spectrum Protection Act, including a copy of the House and Senate versions of the bill, is available on the ARRL Web site, http://www.arrl.org/govrelations/arspa.html .

==>GEORGE JACOBS, W3ASK, IS DAYTON HAMVENTION'S AMATEUR OF THE YEAR

Dayton Hamvention has named broadcasting engineer and propagation guru George Jacobs, W3ASK, as its Amateur of the Year. Hamvention also announced the winners of its Special Achievement and Technical Excellence awards.

A renowned international broadcast engineering pioneer, Jacobs has authored hundreds of technical articles and is a co-author of a handbook detailing shortwave radio propagation characteristics. Jacobs is perhaps best known in the amateur community as propagation editor for CQ for 50 years, and as a contributing editor for World Radio-TV Handbook for 39 years.

"His contributions to Amateur Radio, both technical and fraternal, have furthered the state-of-the-art for half a century." said a Hamvention news

release. Jacobs is credited with pioneering and developing the worldwide Voice of America system and with overseeing the post-1974 modernization of Radio Free Europe and Radio Liberty. He's also served as a delegate on international regulatory conferences.

Frank Bauer KA3HDO, has been chosen to receive Dayton Hamvention's Special Achievement award for 2001. Bauer's countless hours of behind-the-scenes work with the Space Amateur Radio EXperiment and Amateur Radio on the International Space Station (ARISS) programs have made these very high-profile activities world-wide successes. Bauer, who chairs the ARISS Board, organized and led the teams that provided the links to schools so that students could talk with astronauts as they orbited the earth. He developed band plans for spectrum utilization for Amateur Radio space operations and continues his leadership role as a technical liaison between the Amateur service and NASA.

Peter Martinez, G3PLX, has been chosen to receive Dayton Hamvention's Technical Excellence award for 2001. Martinez, active on RTTY since the 1960s, is recognized as the father of PSK31, an increasingly popular mode of digital communication. PSK31's elegant and effective design has helped revitalize interest in HF digital modes.

All three awards will be formally presented at the Dayton Hamvention banquet on May 19. This year's Dayton Hamvention, May 18-20, will be the 50th.

==>NEW YORK MAKES ANOTHER ATTEMPT AT HAM ANTENNA BILL

True to their word, supporters of an Amateur Radio antenna bill in the State of New York are back this year with new bills introduced in both houses of the legislature. ARRL Hudson Division Director Frank Fallon, N2FF, says measures to incorporate the essence of the limited federal preemption known as PRB-1 into state law have been filed in the Senate as S.2893, with four sponsors, and in the Assembly as A.1565.

If approved, the companion measures would require localities to "reasonably accommodate" Amateur Radio antennas and would prevent localities from restricting antenna structures to less than 95 feet above ground level or from restricting the number of support structures. The bills have been referred to the Local Government Committee.

An effort to get an antenna law on the books in the Empire State last year failed to make it through the legislative process despite gaining significant support. This year's bills are identical to last year's.

Fallon said he's hoping that support for last year's campaign will carry over to this year's effort, and he's calling on New York amateurs to "help make ham radio history in New York" by getting behind the bills.

In addition to contacting their Assembly representatives and state senators, Fallon said, hams should contact the two chairs of the Local Government Committee, Assemblyman Thomas P. DiNapoli, Senator Mary Lou Rath, as well as Assembly Speaker Sheldon Silver and Senate Majority Leader Joseph L. Bruno.

The Hudson Division Web page http://www.arrlhudson.org has a copy of the bill, links to find names and addresses of state representatives, and copies of sample letters.

"As one of the ARRL Directors who has been dealing with this issue for a number of years I am very happy about all the efforts in the other states and now again in New York," Fallon said.

==>GEORGE THURSTON III, W4MLE, SK

Broadcast journalism pioneer, Amateur Radio writer and ARRL field volunteer George Thurston III, W4MLE, of Tallahassee, Florida, died March 20. He was 75. Thurston was editor of the first ARRL Radio Amateur's Operating Manual, the author of QST "Public Service" columns and at least 10 other QST articles from 1951 to 1994. He also won a QST Cover Plaque award.

A Virginia native and a victim of tuberculosis as a teenager, Thurston was first licensed in 1947. He went on to become a respected broadcast news reporter and print journalist who covered stories of national and international interest during his career.

Retired ARRL Communications Manager George Hart, W1NJM, who collaborated with Thurston on the first ARRL Operating Manual, called him "a great guy."

In the 1960s, Thurston and Andy Clark, W4IYT--now a Silent Key--who was then SEC of Southern Florida, put into place what is now the Amateur Radio Emergency Service in Florida and established close ties with the National Traffic System. ARRL Southeastern Division Director Frank Butler, W4RH--then a section manager--had appointed Thurston as Section Emergency Coordinator for the old Western Florida Section. "Thurston did a great job in Florida," he said. "He was an all-around good ham, and an excellent CW operator."

Thurston later served as SEC of the Northern Florida Section--from July 1990 through November 1996--and is credited with helping to strengthen the ARES organization in the section. W4MLE also was an ARRL Official Relay Station and a past president of the Tallahassee Amateur Radio Society.

ARRL Southeastern Division Vice Director Evelyn Gauzens, W4WYR, called Thurston "a backbone in emergency communications in Florida."

Northern Florida Section Manager Rudy Hubbard, WA4PUP, said Thurston was dedicated to Amateur Radio and an experienced and knowledgeable operator.

As a free-lance broadcast journalist, Thurston spent two decades in the state capital press corps, including many years as bureau chief for the Washington Post-owned stations in Florida.

Thurston's obituary in the Tallahassee Democrat notes that in 1959 Thurston was the first broadcast journalist to cover the Florida Legislature full-time. He also inaugurated the first live television broadcasts from the legislative chambers. Thurston later covered the arrest, conviction and execution of serial killer Ted Bundy. He also worked as a correspondent for Time.

His wife, Maryjane, four children and seven grandchildren survive. A funeral service is set for March 24, 11 AM, at Bevis Funeral Home in Tallahassee.

==>SOLAR UPDATE

Heliophile Tad Cook, K7VVV, Seattle, Washington, reports: This week we've seen a major geomagnetic storm, which began on Monday. The disturbance reached a peak on Tuesday, with a planetary A index of 66 and planetary K indices of 5, 6 and 7. The high-latitude college A index was 105, and the K index reached 8.

The energy released produced dramatic auroral displays. Check out the images at http://spaceweather.com/aurora/gallery_20mar01.html .

With the equinox this week, springtime HF conditions should be at a peak, when the southern and northern hemispheres each gets an equal amount of solar radiation. Average solar flux this week was 144.2 which is slightly lower than it was during this week in 1999, when it was 147.5. Last year at this time it was 207.8. So we are currently still enjoying the peak of cycle 23, but conditions are more like they were at this time two years ago.

Solar flux rose sharply to 183 on Thursday, and the latest projection shows solar flux around 180 for the next week. There may be unsettled geomagnetic conditions this weekend for the CQ WW WPX Contest. Current projections show the planetary A index for Friday through Monday at 15, 10, 12 and 12.

Sunspot numbers for March 15 through 21 were 126, 86, 90, 91, 85, 98 and 136, with a mean of 101.7. The 10.7-cm flux was 136.1, 139.9, 134.2, 139.8, 147, 153.3 and 159.4, with a mean of 144.2. Estimated planetary A indices were 3, 2, 4, 7, 22, 66 and 19 with a mean of 17.6.

==>IN BRIEF:

* This weekend on the radio: The CQ WW WPX Contest (SSB) is the weekend of March 24-25. The Spring QRP Homebrewer Sprint is March 26. JUST AHEAD: The SP DX Contest, the EA RTTY Contest, the QCWA QSO Party are the weekend of April 7-8. The UBA Spring Contest (SSB) is April 8. The VHF/UHF Spring Sprints are April 9. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* "Boing-Boing" Intruder Moves Off 12 Meters: Some said it sounded like a squeaky spring; others said it sounded like marching. However one's ears interpreted the recent intruder on the 12 meter amateur band, it was gone by Monday, March 19, thanks to successful direction-finding, identification and diplomatic efforts by the FCC. Acting on numerous amateur reports--including one from ARRL President Jim Haynie, W5JBP--the FCC agreed to utilize its HF direction-finding facility in Columbia, Maryland, to locate the source of the periodic, broadband transmission. The HFDF facility isolated the transmissions to Honduras. It also promptly identified the transmissions as Coastal Ocean Dynamics Applications Radar (CODAR), an ocean current-mapping technology used in meteorological and commercial applications. A quick phone

call and e-mail to the provider of the CODAR equipment at the Honduras site set the wheels in motion to make the signals disappear from 12 meters. "As is often the case in many intrusions, the operator dialed in the wrong frequency," said Brennan Price, N4QX, administrator of the ARRL Monitoring System. "Fortunately, the equipment provider and operator of the CODAR equipment were very cooperative and wanted to do the right thing. We appreciate their efforts."

* Europe Adopts 5 WPM as Morse Code Standard: The Conference of Postal and Telecommunications Administrations--CEPT--has effectively lowered the Amateur Radio Morse code test speed to 5 WPM for all European countries. The CEPT Radio Regulatory Working Group (WGRR), meeting last month in The Hague, adopted a revision of Recommendation 61-02 to include the 5 WPM standard. The European Radiocommunication Office published the revised version of T/R 61-02 this month. The revision, which establishes requirements for the issuance of a Harmonised Amateur Radio Examination Certificate (HAREC), reduces the Morse requirement from 12 WPM. "In revising what is known as the CEPT Recommendation T/R 61-02, it has in effect recommended to 44 European countries to adopt the 5 WPM standard," said Wireless Institute of Australia-Victoria President Jim Linton, VK3PC, who closely follows global developments in Amateur Radio Morse code trends. Additional information is available on Linton's Morse code watch site, http://www.wiavic.org.au/mcw . More information on CEPT is on the ERO Web site, http://www.ero.dk .

* Alaska PRB-1 Bill Passes Senate: Alaska's Amateur Radio antenna bill, Senate Bill 78, was approved by the Alaska Senate this week in a 20-0 vote. Last week, SB 78 got approval from the Senate Community and Regional Affairs Committee. The measure now goes to the Alaska House for consideration. ARRL Alaska Section Manager Kent Petty, KL5T, encouraged amateurs in his section to thank the Senate lawmakers for their votes. "They certainly listened to our requests, and deserve our thanks," he said. "The next challenge will be to convince our representatives in the House to take the same important action, and to send this bill to Gov Knowles to sign into law." House members' names and contact information are available on Alaska's legislative Web site, http://www.legis.state.ak.us/. More information on PRB-1 and Amateur Radio antenna regulation, is on the ARRL Web site, http://www.arrl.org/FandES/field/regulations/#local .

* AMSAT-NA 2001 Annual Symposium issues call for papers: The first call for papers has been issued for the AMSAT-NA 2001 Annual Symposium, set for October 5-6 in Atlanta, Georgia. Papers may be presented by the author during the symposium or simply offered for inclusion in the Symposium Proceedings. Subject matter should be of general interest to Amateur Radio operators involved in satellite communications. Suggested topics include operating techniques, antenna design and construction, spacecraft design and construction, current mission status, proposed satellite missions, telemetry acquisition and relay, satellite microwave projects, etc. An outline abstract of the proposed paper should be submitted as soon as possible. The final date for abstracts is June 30, 2001. Completed papers must be received no later than August 15. Electronic submittal is preferred. The format must be either MS Word-compatible or plain text. For security purposes, Symposium

Chairman Steve Diggs, W4EPI, asks authors to send files as e-mail attachments to w4epi@....--AMSAT News Service

* FCC chairman touts "enforcement model": Speaking at the CTIA 2001 Wireless show in Las Vegas, Nevada, this week, FCC Chairman Michael Powell said the FCC is rethinking its business model. According to an Infoworld.com report (http://www.infoworld.com/articles/hn/xml/01/03/20/010320hnpowell.xml?0321weam), Powell told the gathering that the FCC is "reviewing the optimal organization and structure" with an eye toward a more-responsive FCC. "We are putting increasing emphasis on an enforcement model as opposed to a regulatory model," he said, in order to speed up the FCC's decision-making process. "When you cheat, we'll get you at the back end." Powell also said there's a delicate balance for agencies such as the FCC between fostering innovation but not imposing it.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections

effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

To leave letter-list, send mailto:majordomo@...
with the BODY of the message containing:

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

The Annual membership is now due for the year 2001-2002, all ordinary members are requested to remit a sum of Rs.250/- by cheque in favour of "Mumbai Amateur Radio Society" or in cash at the earliest.

The option for converting the membership into Life Membership is also open.

Dear friends.

Thanks for the condolence messages. My father was in coma for nearly 16 days. He was 70 and since last 1 year he had been suffering from paralysis and was literally in bed. Thanks to god for not making him suffer further.

from vu2jpn & family members.

dear prashant,

Thanks for the info, well it seems that the chinese are out to put ham radio out of business. We hams surprisingly don't fight back, and they know that. Well after all, this is our hobby and most of feel it does not matter even if we loose all our bands.

I can take the horse to the water but can't make him drink. after repeated request to all the HAMS in mumbai, still nothing fruitful has materialized about chinese phones. if HAM RADIO is destined to go , I alone cannot stop it.

I can also assure you that none of the members will even respond to these e mails, so doing something for ham radio is far a fetched thing.

156. Details reqd for the web page..

Yahoo group: m_a_r_s
Date: 2001-04-12 10:53:51 UTC
From: mehul2k@vsnl.com
Topic: 156 Message: 156

Hi Nilesh,
I am awaiting the details required for the web site. Without those details I would not be able to get the web page done.
Kindly check that the following topics are covered in the document that u are sending to me.

1. Our Mission
2. Our Vision
3. Contact details of commitee members
4. Scanned pics (if any)

Also attach the document that u had prepared on our visit to Bhuj. U can also send me the list of founder members if u wish that the list should be displayed on the site.

Any other details or information that u would like to incorporate is also welcome.

Thanks and Regards,

Mehul.

157. WEB SITE Data .

dear mehul,

I simply do not understand what you want me to do, I have mailed you guys all the data
on 27th march, again on 28th March, again on 02 April, again on 12th April at 10:46 am.

After sending the mail again on 12 April at 10:46 am to all your possible e mail addresses, I fail to understand how can you send a mail at 04:23 pm that I have not sent you any details.

Please note the attachments of all my earlier mails consisted of all you required data,
such as :-
1. Objects of our society.
2. what is ham radio.
3. what can you do with ham radio.
4. how to become a ham.
5. activities of MARS.
6. Disaster communication report.
7. Details of MARS classes.
8. Photographs (JPG) of BHUJ.

Practically all the details required for our WEB SITE. If you still claim that I have not sent you the details then I can send it to you by Courier with confirmation.

Also kindly check with Sandip (vu2ugo), he has confirmed that he has received the data.

Hi mehul & sandip

look I am sending you some rough plans for our web site, pls for god sake keep a dead line
for the complete proper site (I suggest 1 may 2001) but you guys know the best, in the mean time at least put some stuff on the web (such as Address , Telephone nos, email and some activity list)

if you any help from my side do let me know, pls coordinate with each other and do the needful,

Hey Friends,
To Start anything it need not be with complete data,
but with complete vision. We can start with making an
outline of the website and make it visible to people.
Then members will come up with the more & more data.
Its the process of evolution as some people call
'eDarwinism..' cheerup!!!

If its 'One World One Language'---> we understand each
other..
All the best in your efforts guys
kiran

160. QRM on VHF Band.

Yahoo group: m_a_r_s
Date: 2001-04-13 15:18:55 UTC
From: vu2nlf
Topic: 160 Message: 160

Dear Members,

Most of you are aware that we are facing serious QRM on VHF made by chinese long range telephones. MARS had officially written to WPC in January. Upon receiving our complaint WPC-Delhi instructed the Monitering Station at Gorai to talk immediate action.

Till date No Serious has been taken by the Monitering Station and the QRM is increasing day by day as new telephones are coming in. At this rate we could be out of business on VHF very soon.

During the Managing Committee of MARS held on 12th April 2001 it is decided that some immediate action must be taken , 18th April 2001 (Wednesday) being International Communication Day. has been choosen.

A Rally (Morcha) is organised to go to the Monitering Station at 10:00 am. We expect many hams to participate in this rally. We hope that our personal visit to the monitering station in large numbers would force the authorities to taken action. Such as confisticating these telephones and give necessary press releases to curb this QRM.

All Hams interested to participate in this cause can meet up at Borvili Station on the West side at the ticket counter at 10:00 am on 18th Morning. Mukesh Jaitley (VU2UGO) shall be leading the group. You can also call him on 98200-34431 for further clarification.

We sincerely hope that we shall have good participation.

Hi All,

Our first page of MARS is out in its beta version !!!

This is the basic design of the first page. The links are non-functional as we have done this in just 2 hours. We expect the complete site to be functional by 17th or 18th. Hence u all can revert with ur suggestions on the first design so that changes (if any) can be incorporated.

It has been uploaded on www.dotteq.com/mars for all of you to evaluate and provide your valued feedbacks.

WE HAVE NOT LOADED ON THE OFFICIAL MARS WEBSITE.

Kindly visit the website and revert with ur valued suggestions.

Regards,

Mehul.

Hi - The web page looks very attractive indeed. I just wondered at the focus on disasters (incl. the pics on top)! do we pursue the hobby only to help during disasters? very morbid kind of a hobby that makes it! keep the perspective a little broad please. Like tata steel we also chat you know!
wonderful work tho! that too in a couple of hours
cheers!

==>RED RIVER VALLEY HAMS BRACE FOR SERIOUS FLOODING

Hams on both sides of the Red River in Minnesota and North Dakota are
bracing for the possibility of serious flooding. ARRL Minnesota Section
Manager Randy "Max" Wendel, KM0D, and North Dakota SM Kent Olson, KA0LDG,
say area amateurs are ready. The region was devastated by flooding in 1997.

"We learned a lot back in the floods of '97, and everyone is much more aware
of the needs that can arise with emergency communications as a result, so
we're much more prepared this time," Wendel said. "Right now, we're in a
standby mode." Wendel says he's touched bases with state emergency
```

management officials and said he could mobilize at least 100 hams at a moment's notice, if needed.

"I think the point is, being prepared and organized and ready to go," he said. "I think the floods of '97 were quite an eye-opener for a lot of people."

In North Dakota, Olson said hams already are pitching in to assist by helping to dispatch sandbagging teams, by doing house-to-house checks and assisting the Salvation Army units on scene. "We're definitely ready," he said. "Our guys sprang right in from the get-go."

Wendel says water levels in Minnesota are approaching the 1997 flood levels, at the time dubbed a 500-year flood. "Rivers all across the state are rising to levels predicted to come very near the disastrous levels of three years ago," he said. But this time around, dikes and flood walls installed or upgraded since 1997 are helping to reduce damage.

Locations affected are the Red River Valley along the Minnesota and North Dakota border, the Minnesota River through the southern part of the state, along with the St Croix and the Mississippi River on the east side of Minnesota. Rain across the region at mid-week brought nearly two inches to many areas already threatened by rising waters.

"So far," Wendel said, "ARES has not been requested to assist with communications, but we are ready for the call." He said State Emergency Coordinator Gary Peterson, N0ZOD, has been in contact with the Minnesota Department of Emergency Management and has reassured state emergency officials that ARES is ready to go with just a phone call.

"The people in Minnesota are known for their volunteerism, and once again, they're proving it, one sandbag at a time," Wendel said. Both Wendel and Olson note that this time around, temperatures have not been as cold, eliminating ice from the rivers, and nearly all snow cover has melted.

==>HAYNIE ADDRESSES AMATEUR RADIO INDUSTRY GROUP

For the third year in a row, the ARRL has joined Amateur Radio equipment manufacturers and publishers to exchange ideas and discuss issues facing the ham radio industry. As the guests of AES owner Phil Majerus, the industry representatives gathered last weekend near Milwaukee in conjunction with Amateur Electronic Supply's "Superfest 2001."

ARRL president Jim Haynie, W5JBP, spoke to the group about ARRL activities to promote Amateur Radio. Calling it "an exciting time in Amateur Radio," Haynie outlined plans for expansion of youth recruitment activities in schools, involvement with ham radio aboard the International Space Station and increased ARRL membership. He also highlighted ARRL's ongoing efforts in Washington, DC, to protect the interests of the Amateur Radio Service.

Among those attending from ARRL Headquarters were Advertising Manager John Bee, N1GNV, and ARRL Marketing Coordinator Bob Inderbitzen, NQ1R.

During his stay in Wisconsin, Haynie was interviewed by a Milwaukee television station April 5 for the station's morning news show. Joining Haynie during the interview was Chip Margelli, K7JA, of Yaesu USA, and Gordon West, WB6NOA, of the Gordon West Radio School. As several ham radio industry representatives looked on, the three answered general questions about Amateur Radio, demonstrated equipment, and invited viewers to attend Superfest 2001. AES Manager Ray Grenier, K9KHW, organized the interview, which Haynie touted as a "great recruitment opportunity."

Superfest 2001, an ARRL-sanctioned hamfest, was held at the AES store in Milwaukee April 6 and 7.

==>KENTUCKY STUDENTS CHAT WITH JIM VOSS ABOARD ISS

Youngsters at the Woodford County Middle School in Versailles, Kentucky, showed up for school during their spring break to ask questions of astronaut Jim Voss aboard the International Space Station. The contact April 9 was scheduled through the Amateur Radio on the International Space Station, or ARISS, program. Voss used the space station's NA1SS call sign.

Voss' first outing on Amateur Radio from space as part of the ISS Expedition 2 crew got off to a shaky start because of difficult copy on Voss's part. A solid contact for the southern hemisphere pass via Tony Hutchison, VK5ZAI, in Australia, eventually was established as precious seconds ticked by. As a result, only eight students got to ask their questions. Students were networked--or telebridged--with Hutchison via a WorldCom telephone connection for the ARISS contact.

During the question-and-answer session, one student asked about research projects. "We've conducted a lot of experiments in space over time," Voss said. "We grow crystals in space that help us to better understand the structure of crystals." He said this research might have applications in developing pharmaceuticals and other products. "We do a lot of things we can't do on Earth by using the microgravity of space," he said, explaining that eliminating gravity makes research a lot easier.

Food is a favorite question topic, and the Woodford students were no exception in posing one on the subject. Voss said that half of the crew's meals are Russian cuisine, the other half American. Voss signed off by urging the students to work hard in school and to do their best.

"I think everybody enjoyed it," said the Woodford County Amateur Radio Club's Steve McFadden, KA4TJD, following the contact. "It's been a learning experience for all of us."

==>HOPEFUL SPACE TOURIST TITO IS NOW KG6FZX

Wealthy US businessman Dennis Tito, who hopes to be the first space tourist aboard the International Space Station, now is an Amateur Radio operator. Tito, 60, has been in Russia training to go into space.

Last weekend a volunteer examination session was set up for Tito in Russia and he passed the Technician exam. The FCC issued Tito the call sign KG6FZX April 11. It's not clear at this point how Tito plans to use Amateur Radio

aboard the ISS.

Press accounts say Russia has given Tito the go ahead to visit the ISS as part of a three-man team that will blast off April 28 on a 10-day mission. Tito reportedly is paying the cash-strapped Russian space program some $20 million for the privilege of being the first space tourist. Accompanying Tito into space will be Talgat Musabayev as team commander, and Yuri Baturin as onboard engineer. Tito reportedly will handle communications systems during the flight.

Tito, the founder of a California investment firm, studied aerospace engineering in college and later worked for five years at NASA's Jet Propulsion Lab. He told a news conference that he's excited about the prospect of going into space and he's looking forward to the experience. Tito had hoped to visit the Russian Mir space station, but those plans had to be scrapped when the Russians decided that it was time to deorbit the aged spacecraft.

The prospect of Tito's visit aboard the ISS has generated some tension between the US and Russian space agencies. NASA chief Dan Goldin has suggested that Tito's planned visit this month would be a disruption to the Expedition 2 crew during a complex mission. Russia's space agency director general Yuri Koptev said the mission will go forward. He said Russia does not need permission from its international partners to fly specific individuals to the space station.

==>IDAHO GOVERNOR INKS AMATEUR RADIO ANTENNA BILL

Idaho Gov Dirk Kempthorne has signed an Amateur Radio antenna bill into law. The bill, called "The Emergency Communications Preservation Act," incorporates the language of the limited federal preemption known as PRB-1 into Idaho state law. Idaho Section Manager Mike Elliott, K7BOI, has credited John Cline, K7BDS, and his staff at the Idaho Bureau of Disaster Services with leading the effort to get the bill passed.

The new law will require local rules or ordinances involving placement, screening or height of antennas or towers and based on health, safety or aesthetic considerations to "reasonably accommodate" Amateur Radio communication. Such laws also must represent "the minimum practicable regulation to accomplish a legitimate purpose" of the municipal government.

After consideration by the House Business Committee, the measure passed the Idaho House 66-1 and the Senate 34-1. Kempthorne signed the measure into law on April 4. When the new law goes into effect July 1, 2001, Idaho will become the eleventh state to have an Amateur Radio antenna bill on its books.

For more information on the Idaho Amateur Radio antenna legislation, visit the Idaho legislature Web site, http://www3.state.id.us/oasis/H0232.html .

==>WHITE HOUSE TAPS THREE FOR FCC SEATS

President George W. Bush has tapped Republicans Kevin Martin and Kathleen Abernathy and Democrat Michael Copps for seats on the FCC. All three White House choices are described as experienced Washington players. The nominations are undergoing FBI background checks before being submitted for Senate confirmation.

Martin, a telecommunications attorney and former adviser to Republican commissioner Harold Furchtgott-Roth, left the FCC to join the Bush-Cheney campaign. He has been nominated to serve until 2006 in the seat vacated January 19 by former FCC Chairman William Kennard, a Democrat.

Abernathy, also an attorney and a former aide to former Democratic FCC member James Quello and a former lobbyist for US West, was nominated to serve until 2005. She'll taking over the seat of Furchtgott-Roth, who announced earlier this year that he would not seek reappointment.

Copps is a former aide to South Carolina Sen Ernest "Fritz" Hollings and former assistant secretary of commerce for trade development in the Clinton administration. He will replace Democratic commissioner Susan Ness and can serve until 2004.

Yet to be named is a nominee for the seat now filled by Democratic Commissioner Gloria Tristani, who has not said when she plans to leave the FCC. Among the suggested replacements is Andy Levin, counsel to Democratic US Rep John Dingell of Michigan.

No more than three members of the FCC may be from the same political party.

==>ARRL HQ STAFFER CHUCK HUTCHINSON, K8CH, RETIRES

ARRL Headquarters staff member Chuck Hutchinson, K8CH, has retired. Hutchinson, 60, began his League career in 1981 as a technical editor. He served as Membership Services Manager from 1991 until 1998, when, for medical reasons, he moved into a part-time editorial role. Hutchinson has been working from his home in Michigan for the past several months.

"Our community is indebted to Chuck for the contributions he made to both the technical and the operating sides of Amateur Radio during his 20-year career with the ARRL," said ARRL Executive Vice President David Sumner, K1ZZ, who's known Hutchinson for many years.

A long-time SWL and a ham since his late teenage years, Hutchinson was first licensed as KN8UDJ in 1960. He says the first thing he did after getting licensed--even before buying equipment--was to join ARRL. He's now a Life Member.

Hutchinson said short-wave listening and ham radio were major influences on his educational and work careers. Before coming to ARRL, Hutchinson worked as a studio engineer for international short-wave broadcaster HCJB in Quito, Ecuador, in the mid 1970s. He says Amateur Radio legend Doug DeMaw, W1FB, interviewed him for his first job at ARRL.

Hutchinson's first major project at HQ was editing the 1985 Handbook. As manager of the Membership Services Department, he oversaw the early

transition from paper to computerized DXCC records. He also reorganized contest rules into the present format and was responsible for reinvigorating the A-1 Operator's Club. Hutchinson also contributed dozens of columns and articles for QST.

Hutchinson says he and his wife, Sylvia, K8SYL--whom he married in 1961--now are enjoying their new home on a hill in Michigan's Ionia County, where both are active in the local ARES organization. The couple has two sons, including Scott, N1DSF, who serves in the US Air Force.

"It's been very satisfying to work for ARRL," Hutchinson said. "I'm looking forward to a continuing relationship as I work on special projects." One of those "special projects" will be a book on his favorite subject--antennas.

==>SOLAR UPDATE

Propagation prognosticator Tad Cook, K7VVV, Seattle, Washington, reports: High solar activity continued this week. Although the actual sunspot numbers and solar flux values have generally declined, new active areas on the sun have rotated into Earth's view, bringing flares and coronal holes--and with them geomagnetic storms and dramatic auroral displays.

Average sunspot numbers for the week declined more than 100 points, and average solar flux was off more than 62 points. Again this week, on April 5 and 6, the 10.7 cm solar flux value had to be adjusted because the observatory in Penticton, British Columbia was overwhelmed by energy from solar flares. Daily values for last Thursday and Friday were flare enhanced at 398.7 and 563.5, but were adjusted downward and reported by NOAA as 210 and 192.

As this bulletin is being written on Thursday, two clouds of charged particles are headed our way. The last is from another X-class solar flare. This one erupted near sunspot group 9415 at 1025 UTC, and caused a radio blackout across the Atlantic Ocean, Europe, and parts of Western Asia.

On Wednesday energy from a pair of coronal mass ejections hit Earth and triggered a severe G4-category geomagnetic storm between around 1500-1800 UTC. G4 category is severe, one step below the top G5 category, which is extreme. This may cause problems with power distribution systems, with surges in voltage and tripping of circuit breakers. On Wednesday the planetary K index hit 8, and the planetary A index was 60. Middle latitude A index was 69.

On the bands expect long periods of very little HF propagation, but look for auroral propagation on VHF. Current predictions call for solar flux to decline below 150 this weekend and bottom out around 140 on Sunday. Then, it is expected to rise to 180 around April 20, and peak around 185 after April 23 and toward the end of the month.

Sunspot numbers for April 5 through 11 were 214, 136, 153, 188, 185, 170 and 178 with a mean of 174.9. 10.7 cm flux was 210, 192, 179.5, 169.2, 164.8, 169.7 and 159.6, with a mean of 177.8, and estimated planetary A indices

were 19, 12, 16, 41, 19, 9 and 60 with a mean of 25.1.

==>IN BRIEF:

* This weekend on the radio: The DX YL to NA YL Contest (CW) is Apr 11-13; the Lighthouse Spring Lites Rites QSO Party is April 13-23; the EU Spring Sprint (SSB) is April 14; the Japan International DX Contest, the MARAC County Hunter Contest (SSB), the QRP ARCI Spring QSO Party, and His Majesty King of Spain Contest are the weekend of April 13-15. JUST AHEAD: The 222 MHz Spring Sprint is April 17; the TARA Spring Wakeup PSK31 Rumble, the YU DX Contest; the EU Spring Sprint (CW), the Michigan and Ontario QSO parties, and the Holyland DX Contest are the weekend of April 21-22. The 432 MHz Spring Sprint and the Harry Angel Memorial Sprint are April 25; the DX YL to NA YL Contest (SSB) is April 25-27. See the ARRL Contest Branch page, http://www.arrl.org/contests/ for more info.

* Clarification: An announcement concerning in-person Level I Amateur Radio Emergency Communications Courses that ran in The ARRL Letter, Vol 20, No 14 (Apr 6 2001), was premature. At this point, ARRL is seeking volunteers to serve as Certification Instructors and Certification Examiners for the in-person courses. Certification Instructors will come from the ranks of those amateurs who have successfully completed the Level I course, which has only been offered on-line until now. To learn how to qualify for these positions, see http://www.arrl.org/cce/admin-criteria.html. As in-person courses are scheduled, details and contact information will be announced. For more information on the ARRL Certification and Continuing Education Program, see http://www.arrl.org/cce/ or e-mail cce@arrl.org.

* World Amateur Radio Day set for April 18: The Administrative Council of the International Amateur Radio Union has selected the theme "Providing Disaster Communications: Amateur Radio in the 21st Century" for World Amateur Radio Day, April 18, 2001. IARU has been the watchdog and spokesman for the world Amateur Radio community since its founding in Paris, France, in 1925. ARRL co-founder Hiram Percy Maxim, 1AW, was its first president.

* ARISS packet system working, sort of: ARISS Board Chairman Frank Bauer, KA3HDO, says the Amateur Radio on the International Space Station packet system is operational, but because of a failed RAM backup battery, the system at present has no call sign. "We have been waiting for the crews to connect a laptop to the packet module to check out the packet system and re-install the packet parameters," he said. Some tests were run to see if the system worked with only PROM parameters. "We have determined from our ground tests that one can connect to the packet system using 'nocall' and digi through it." Bauer said he recently ran tests on two passes to validate that the packet system was still operational, but with a dead battery. He was able to successfully connect to "nocall" on one pass and digipeat on a second pass. Bauer says the ARISS team will continue to work with the Expedition 2 crew to get the packet parameters installed, so that the packet system fully configured.--ARISS

* Dayton Hamvention announces banquet MC, speakers, and entertainment: Carl Nichols, N8WFQ, will be back this year as Banquet Master of Ceremonies for the 2001 Dayton Hamvention. Nichols is Chief Meteorologist for WDTN Channel 2 news in Dayton. The featured banquet speakers are Bob Heil, K9EID, of Heil Sound Ltd; FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth, K4ZDH, and Space Amateur Radio EXperiment (SAREX) Working Group Chairman Roy Neal, K6DUE. Their topic will be "Amateur Radio, Past, Present and Beyond." Post-banquet entertainment will be provided by Jim Whitter and Jude Johnson of Canada--The Hammer Band. For more information, visit the Hamvention Web site, http://www.hamvention.org/ .--Dayton Hamvention

* Ham radio to be represented at NAB convention: Amateur Radio will once again have a presence at the National Association of Broadcasters' convention in Las Vegas, Nevada, April 21-26. NAB donates booth space to ARRL, and local hams volunteer for booth duty. This year's "booth coordinator" will be Ed Terrell, KB5FNX. The ARRL booth attracts broadcast professionals who are hams, as well as other visitors with technical backgrounds and interests. The annual and very popular Amateur Radio reception will be held April 25 at 6 PM at the Las Vegas Hilton. NAB Vice President for Science and Technology John Marino, KR1O, will host. ARRL donates selected publications for door prizes. Approximately 1000 amateurs are expected to attend. ARRL Southwestern Director Fried Heyn, WA6WZO, and Pacific Director Jim Maxwell, W6CF, plan to be among them.

* QRP pedestrian-to-pedestrian record trumped: Amateurs in Greece and New Zealand have raised the bar for the longest low-power pedestrian-to-pedestrian contact. On February 28, Max Pompe, ZL1BK, worked Demetre Valaris, SV1UY, over a distance of more than 17,500 miles long-path. Both operators carried compact, portable low-power transceivers and portable antennas. Valaris credited the sun with providing good propagation conditions. When contact was established February 28 at 0625 UTC on 20-meter CW and later on SSB, ZL1BK was hiking in a park near his home in Auckland, New Zealand, while Valaris was hiking on Mt Ymittos in Greece. Both were running Yaesu FT-817s at 5 W. SV1UY used a 2-meter-tall center-loaded whip, while ZL1BK used a hand-held 5-meter long center-loaded dipole. Both operators are members of a group of backpack radio enthusiasts called "HFpack." For more information on HFpack, visit http://groups.yahoo.com/group/hfpack/. Visit SV1UY's Web site, http://www.athnet.ampr.org/~sv1uy .--Demetre Valaris, SV1UY

* KPH coastal station gear to be on air for International Marconi Day: Amateur Radio station K6KPH will be on the air for International Marconi Day from the original transmitting and receiving stations of ex-RCA coast station KPH. Operation is set to start at 0700 UTC Saturday, April 21. The frequencies of operation will be 7050 and 14,050 kHz. KPH traces its history back to the days of Marconi operation at the Bolinas transmitting site. K6KPH will be operated using the original transmitters, receivers and antennas of KPH. The operators will be at the Point Reyes receiving station, remotely keying the transmitters in Bolinas, just as was done when the station was in commercial operation. Members of the Maritime Radio Historical Society--which include several original KPH operators--will be at

the key. Details about International Marconi Day are available on the Cornish Radio Club Web sit, http://www.users.globalnet.co.uk/~straff/ . Visit the Maritime Radio Historical Society Web site, http://www.radiomarine.org .--Dick Dillman, W6AWO

* N1IN, named to MARS PR post: Retired journalist Bill Sexton, N1IN, of Richmond, Massachusetts, has been named as public awareness coordinator for the Military Affiliate Radio System, or MARS. Sexton succeeds Lori Matthew, N4ZCF, whose public relations coordinator title was retired after her death last September. In the volunteer position, Sexton reports to Army MARS Chief Bob Sutton, N7UZY, and is responsible for disseminating information about MARS member activities. "MARS may be among the most active sectors of amateur radio but it's also among the least known," Sexton said. "The fact that we operate on frequencies outside the ham bands accounts in good part for the lack of public familiarity." Sexton explains that in all three branches--Army, Air Force and Navy-Marine Corps MARS--the primary mission is maintaining readiness for emergency communications support to the Defense Department and other government agencies. "Training is constant and demanding," he said, and has overtaken the traditional MARS function of handling health-and-welfare traffic between service members and their families. A former newspaper and wire service journalist, Sexton joined MARS in 1992. Write him at William C. Sexton, N1IN, PO Box 428 Richmond, MA 01254-0428; e-mail sextonw@....

* Wisconsin declares Amateur Radio Operator Recognition Day: Wisconsin Gov Scott McCallum has signed a proclamation declaring April 19 as Amateur Radio Operator Recognition Day in Wisconsin. The proclamation cites Amateur Radio's role in providing emergency communication "at no cost to Wisconsin taxpayers" and singles out RACES, ARES and SKYWARN, as well as the clubs throughout the state that provide Amateur Radio training and school programs. Included as well was Amateur Radio's support for the annual run of the Great Circus Train.--Mack Brophy, N9NTB

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; http://www.arrl.org. Jim Haynie, W5JBP, President

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb at http://www.arrl.org for the latest news, updated as it happens. The ARRLWeb Extra at http://www.arrl.org/members-only/extra offers ARRL members access to informative features and columns.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@...t (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

> ==>RED RIVER VALLEY HAMS BRACE FOR SERIOUS FLOODING
>
> Hams on both sides of the Red River in Minnesota and North Dakota are
> bracing for the possibility of serious flooding. ARRL Minnesota Section
> Manager Randy "Max" Wendel, KM0D, and North Dakota SM Kent Olson, KA0LDG,
> say area amateurs are ready. The region was devastated by flooding in
> 1997.
>
> "We learned a lot back in the floods of '97, and everyone is much more
> aware of the needs that can arise with emergency communications as a
> result, so we're much more prepared this time," Wendel said. "Right now,
> we're in a standby mode." Wendel says he's touched bases with state
> emergency management officials and said he could mobilize at least 100
> hams at a moment's notice, if needed.

>
> "I think the point is, being prepared and organized and ready to go," he
> said. "I think the floods of '97 were quite an eye-opener for a lot of
> people."
>
> In North Dakota, Olson said hams already are pitching in to assist by
> helping to dispatch sandbagging teams, by doing house-to-house checks and
> assisting the Salvation Army units on scene. "We're definitely ready," he
> said. "Our guys sprang right in from the get-go."
>
> Wendel says water levels in Minnesota are approaching the 1997 flood
> levels, at the time dubbed a 500-year flood. "Rivers all across the state
> are rising to levels predicted to come very near the disastrous levels of
> three years ago," he said. But this time around, dikes and flood walls
> installed or upgraded since 1997 are helping to reduce damage.
>
> Locations affected are the Red River Valley along the Minnesota and North
> Dakota border, the Minnesota River through the southern part of the state,
> along with the St Croix and the Mississippi River on the east side of
> Minnesota. Rain across the region at mid-week brought nearly two inches to
> many areas already threatened by rising waters.
>
> "So far," Wendel said, "ARES has not been requested to assist with
> communications, but we are ready for the call." He said State Emergency
> Coordinator Gary Peterson, N0ZOD, has been in contact with the Minnesota
> Department of Emergency Management and has reassured state emergency
> officials that ARES is ready to go with just a phone call.
>
> "The people in Minnesota are known for their volunteerism, and once again,
> they're proving it, one sandbag at a time," Wendel said. Both Wendel and
> Olson note that this time around, temperatures have not been as cold,
> eliminating ice from the rivers, and nearly all snow cover has melted.
>
> ==>HAYNIE ADDRESSES AMATEUR RADIO INDUSTRY GROUP
>
> For the third year in a row, the ARRL has joined Amateur Radio equipment
> manufacturers and publishers to exchange ideas and discuss issues facing
> the ham radio industry. As the guests of AES owner Phil Majerus, the
> industry representatives gathered last weekend near Milwaukee in
> conjunction with Amateur Electronic Supply's "Superfest 2001."
>
> ARRL president Jim Haynie, W5JBP, spoke to the group about ARRL activities
> to promote Amateur Radio. Calling it "an exciting time in Amateur Radio,"
> Haynie outlined plans for expansion of youth recruitment activities in
> schools, involvement with ham radio aboard the International Space Station
> and increased ARRL membership. He also highlighted ARRL's ongoing efforts
> in Washington, DC, to protect the interests of the Amateur Radio Service.
>
> Among those attending from ARRL Headquarters were Advertising Manager John
> Bee, N1GNV, and ARRL Marketing Coordinator Bob Inderbitzen, NQ1R.

>
> During his stay in Wisconsin, Haynie was interviewed by a Milwaukee
> television station April 5 for the station's morning news show. Joining
> Haynie during the interview was Chip Margelli, K7JA, of Yaesu USA, and
> Gordon West, WB6NOA, of the Gordon West Radio School. As several ham radio
> industry representatives looked on, the three answered general questions
> about Amateur Radio, demonstrated equipment, and invited viewers to attend
> Superfest 2001. AES Manager Ray Grenier, K9KHW, organized the interview,
> which Haynie touted as a "great recruitment opportunity."
>
> Superfest 2001, an ARRL-sanctioned hamfest, was held at the AES store in
> Milwaukee April 6 and 7.
>
> ==>KENTUCKY STUDENTS CHAT WITH JIM VOSS ABOARD ISS
>
> Youngsters at the Woodford County Middle School in Versailles, Kentucky,
> showed up for school during their spring break to ask questions of
> astronaut Jim Voss aboard the International Space Station. The contact
> April 9 was scheduled through the Amateur Radio on the International Space
> Station, or ARISS, program. Voss used the space station's NA1SS call sign.
>
> Voss' first outing on Amateur Radio from space as part of the ISS
> Expedition 2 crew got off to a shaky start because of difficult copy on
> Voss's part. A solid contact for the southern hemisphere pass via Tony
> Hutchison, VK5ZAI, in Australia, eventually was established as precious
> seconds ticked by. As a result, only eight students got to ask their
> questions. Students were networked--or telebridged--with Hutchison via a
> WorldCom telephone connection for the ARISS contact.
>
> During the question-and-answer session, one student asked about research
> projects. "We've conducted a lot of experiments in space over time," Voss
> said. "We grow crystals in space that help us to better understand the
> structure of crystals." He said this research might have applications in
> developing pharmaceuticals and other products. "We do a lot of things we
> can't do on Earth by using the microgravity of space," he said, explaining
> that eliminating gravity makes research a lot easier.
>
> Food is a favorite question topic, and the Woodford students were no
> exception in posing one on the subject. Voss said that half of the crew's
> meals are Russian cuisine, the other half American. Voss signed off by
> urging the students to work hard in school and to do their best.
>
> "I think everybody enjoyed it," said the Woodford County Amateur Radio
> Club's Steve McFadden, KA4TJD, following the contact. "It's been a
> learning experience for all of us."
>
> ==>HOPEFUL SPACE TOURIST TITO IS NOW KG6FZX
>
> Wealthy US businessman Dennis Tito, who hopes to be the first space
> tourist aboard the International Space Station, now is an Amateur Radio

> operator. Tito, 60, has been in Russia training to go into space.
>
> Last weekend a volunteer examination session was set up for Tito in Russia
> and he passed the Technician exam. The FCC issued Tito the call sign
> KG6FZX April 11. It's not clear at this point how Tito plans to use
> Amateur Radio aboard the ISS.
>
> Press accounts say Russia has given Tito the go ahead to visit the ISS as
> part of a three-man team that will blast off April 28 on a 10-day mission.
> Tito reportedly is paying the cash-strapped Russian space program some $20
> million for the privilege of being the first space tourist. Accompanying
> Tito into space will be Talgat Musabayev as team commander, and Yuri
> Baturin as onboard engineer. Tito reportedly will handle communications
> systems during the flight.
>
> Tito, the founder of a California investment firm, studied aerospace
> engineering in college and later worked for five years at NASA's Jet
> Propulsion Lab. He told a news conference that he's excited about the
> prospect of going into space and he's looking forward to the experience.
> Tito had hoped to visit the Russian Mir space station, but those plans had
> to be scrapped when the Russians decided that it was time to deorbit the
> aged spacecraft.
>
> The prospect of Tito's visit aboard the ISS has generated some tension
> between the US and Russian space agencies. NASA chief Dan Goldin has
> suggested that Tito's planned visit this month would be a disruption to
> the Expedition 2 crew during a complex mission. Russia's space agency
> director general Yuri Koptev said the mission will go forward. He said
> Russia does not need permission from its international partners to fly
> specific individuals to the space station.
>
> ==>IDAHO GOVERNOR INKS AMATEUR RADIO ANTENNA BILL
>
> Idaho Gov Dirk Kempthorne has signed an Amateur Radio antenna bill into
> law. The bill, called "The Emergency Communications Preservation Act,"
> incorporates the language of the limited federal preemption known as PRB-1
> into Idaho state law. Idaho Section Manager Mike Elliott, K7BOI, has
> credited John Cline, K7BDS, and his staff at the Idaho Bureau of Disaster
> Services with leading the effort to get the bill passed.
>
> The new law will require local rules or ordinances involving placement,
> screening or height of antennas or towers and based on health, safety or
> aesthetic considerations to "reasonably accommodate" Amateur Radio
> communication. Such laws also must represent "the minimum practicable
> regulation to accomplish a legitimate purpose" of the municipal
> government.
>
> After consideration by the House Business Committee, the measure passed
> the Idaho House 66-1 and the Senate 34-1. Kempthorne signed the measure
> into law on April 4. When the new law goes into effect July 1, 2001, Idaho

> will become the eleventh state to have an Amateur Radio antenna bill on
> its books.
>
> For more information on the Idaho Amateur Radio antenna legislation, visit
> the Idaho legislature Web site, http://www3.state.id.us/oasis/H0232.html .
>
> ==>WHITE HOUSE TAPS THREE FOR FCC SEATS
>
> President George W. Bush has tapped Republicans Kevin Martin and Kathleen
> Abernathy and Democrat Michael Copps for seats on the FCC. All three White
> House choices are described as experienced Washington players. The
> nominations are undergoing FBI background checks before being submitted
> for Senate confirmation.
>
> Martin, a telecommunications attorney and former adviser to Republican
> commissioner Harold Furchtgott-Roth, left the FCC to join the Bush-Cheney
> campaign. He has been nominated to serve until 2006 in the seat vacated
> January 19 by former FCC Chairman William Kennard, a Democrat.
>
> Abernathy, also an attorney and a former aide to former Democratic FCC
> member James Quello and a former lobbyist for US West, was nominated to
> serve until 2005. She'll taking over the seat of Furchtgott-Roth, who
> announced earlier this year that he would not seek reappointment.
>
> Copps is a former aide to South Carolina Sen Ernest "Fritz" Hollings and
> former assistant secretary of commerce for trade development in the
> Clinton administration. He will replace Democratic commissioner Susan Ness
> and can serve until 2004.
>
> Yet to be named is a nominee for the seat now filled by Democratic
> Commissioner Gloria Tristani, who has not said when she plans to leave the
> FCC. Among the suggested replacements is Andy Levin, counsel to Democratic
> US Rep John Dingell of Michigan.
>
> No more than three members of the FCC may be from the same political
> party.
>
> ==>ARRL HQ STAFFER CHUCK HUTCHINSON, K8CH, RETIRES
>
> ARRL Headquarters staff member Chuck Hutchinson, K8CH, has retired.
> Hutchinson, 60, began his League career in 1981 as a technical editor. He
> served as Membership Services Manager from 1991 until 1998, when, for
> medical reasons, he moved into a part-time editorial role. Hutchinson has
> been working from his home in Michigan for the past several months.
>
> "Our community is indebted to Chuck for the contributions he made to both
> the technical and the operating sides of Amateur Radio during his 20-year
> career with the ARRL," said ARRL Executive Vice President David Sumner,
> K1ZZ, who's known Hutchinson for many years.
>

> A long-time SWL and a ham since his late teenage years, Hutchinson was
> first licensed as KN8UDJ in 1960. He says the first thing he did after
> getting licensed--even before buying equipment--was to join ARRL. He's now
> a Life Member.
>
> Hutchinson said short-wave listening and ham radio were major influences
> on his educational and work careers. Before coming to ARRL, Hutchinson
> worked as a studio engineer for international short-wave broadcaster HCJB
> in Quito, Ecuador, in the mid 1970s. He says Amateur Radio legend Doug
> DeMaw, W1FB, interviewed him for his first job at ARRL.
>
> Hutchinson's first major project at HQ was editing the 1985 Handbook. As
> manager of the Membership Services Department, he oversaw the early
> transition from paper to computerized DXCC records. He also reorganized
> contest rules into the present format and was responsible for
> reinvigorating the A-1 Operator's Club. Hutchinson also contributed dozens
> of columns and articles for QST.
>
> Hutchinson says he and his wife, Sylvia, K8SYL--whom he married in
> 1961--now are enjoying their new home on a hill in Michigan's Ionia
> County, where both are active in the local ARES organization. The couple
> has two sons, including Scott, N1DSF, who serves in the US Air Force.
>
> "It's been very satisfying to work for ARRL," Hutchinson said. "I'm
> looking forward to a continuing relationship as I work on special
> projects." One of those "special projects" will be a book on his favorite
> subject--antennas.
>
> ==>SOLAR UPDATE
>
> Propagation prognosticator Tad Cook, K7VVV, Seattle, Washington, reports:
> High solar activity continued this week. Although the actual sunspot
> numbers and solar flux values have generally declined, new active areas on
> the sun have rotated into Earth's view, bringing flares and coronal
> holes--and with them geomagnetic storms and dramatic auroral displays.
>
> Average sunspot numbers for the week declined more than 100 points, and
> average solar flux was off more than 62 points. Again this week, on April
> 5 and 6, the 10.7 cm solar flux value had to be adjusted because the
> observatory in Penticton, British Columbia was overwhelmed by energy from
> solar flares. Daily values for last Thursday and Friday were flare
> enhanced at 398.7 and 563.5, but were adjusted downward and reported by
> NOAA as 210 and 192.
>
> As this bulletin is being written on Thursday, two clouds of charged
> particles are headed our way. The last is from another X-class solar
> flare. This one erupted near sunspot group 9415 at 1025 UTC, and caused a
> radio blackout across the Atlantic Ocean, Europe, and parts of Western
> Asia.
>

> On Wednesday energy from a pair of coronal mass ejections hit Earth and
> triggered a severe G4-category geomagnetic storm between around 1500-1800
> UTC. G4 category is severe, one step below the top G5 category, which is
> extreme. This may cause problems with power distribution systems, with
> surges in voltage and tripping of circuit breakers. On Wednesday the
> planetary K index hit 8, and the planetary A index was 60. Middle latitude
> A index was 69.
>
> On the bands expect long periods of very little HF propagation, but look
> for auroral propagation on VHF. Current predictions call for solar flux to
> decline below 150 this weekend and bottom out around 140 on Sunday. Then,
> it is expected to rise to 180 around April 20, and peak around 185 after
> April 23 and toward the end of the month.
>
> Sunspot numbers for April 5 through 11 were 214, 136, 153, 188, 185, 170
> and 178 with a mean of 174.9. 10.7 cm flux was 210, 192, 179.5, 169.2,
> 164.8, 169.7 and 159.6, with a mean of 177.8, and estimated planetary A
> indices were 19, 12, 16, 41, 19, 9 and 60 with a mean of 25.1.
>

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

You all must be aware that the term of the First Managing Committee has ended on 31/3/2001. The Committee will continue to hold office till 1st May 2001.

The Annual General Meeting and the Elections for the Second Managing Committee shall take place on 1st May 2001. The Last day for filing your nomination for election is 28/04/2001.

Unfortunately till date we have received only 3 nominations. It takes atleast 7 members to form a Committee. If the new Committee is not formed then the consequences are that the Society may become DEFUNCT.

Please note that as per our constitution only the founder members can run for election for this year. from the next year any member who has a valid Amateur Radio Licence and a society membership of one year can run for election.

If any members who is not a founder member, but still wishes run for the election, can inform the under signed, That is , just in case if we do not get 7 Founder Members for the Managing Committee, then the Present Managing Committee may pass a resolution to amend the Constitution accordingly.

73s
NLF.

==>HAM RADIO NUMBERS SHOW POST-RESTRUCTURING GROWTH SPURT

Amateur Radio is experiencing a bit of a growth spurt in the wake of amateur
license restructuring. FCC licensing statistics as of the end of March--the
most recent complete figures available--show a net gain of approximately
6600 current licensees, or about 1%, from last April, when restructuring
went into effect. Prior to that, the number of amateurs had remained
relatively stable since 1998.

ARRL VEC Manager Bart Jahnke, W9JJ, says the full impact of license
restructuring--including the elimination of the 13 and 20-WPM Morse
exams--is slowly making itself felt within the amateur community. "For the
first quarter of 2001, ARRL VEC test session statistics show that new and
upgrading amateurs continue to earn licenses at a rate stronger that that of
first quarter 1999 and first quarter 2000," he said. "This is a positive
trend that we expect will continue over the coming months."

As of the end of March, according to statistics compiled by Joe Speroni,
AH0A, the FCC showed 684,359 current licensees on its books, although the
number of active amateurs is believed to be far smaller. Speroni's figures
```

show that more than 20,000 new amateurs entered the hobby over the past year, while attrition was on the order of 13,600.

Overall, statistics show growth in the number of Extra, General and Technician licensees from year-earlier figures, while the number of Advanced, Tech Plus and Novice licensees declined.

Jahnke says comparing the ARRL VEC's first quarter 2001 numbers shows that interest in the Extra class license is up by as much as 30% over the first quarters of 1999 and 2000. "Extraordinarily, interest in the General license is up 450% to 650%!" he said.

With the change to a new, 50-question Extra class written element that combines material formerly covered in the 90 questions contained within the old Advanced and Extra tests, some predicted the Extra test would be easier to pass. That's not proving to be the case this year--at least at ARRL VEC-sponsored sessions, where the Extra pass rate has declined by nearly 7% from 1999. Technician and General pass rates this year have been up on the order of 10% to 12% from pre-restructuring rates, however, at ARRL VEC sessions.

Licensee numbers compiled by Speroni show that the FCC issued nearly 5400 new licenses in the first quarter of this year--more than 2230 in the month of March alone. That compares with around 3730 new hams in the same quarter last year. As would be expected, the vast majority of the newcomers entered the hobby as Technician licensees. March was one of only three months in the past year where the number of new licensees exceeded 2000. For more information, visit Speroni's Amateur Radio Education Web Site, http://ah0a.org/AH0A.html.

==>AMATEUR ANTENNA BILLS MOVE FORWARD IN ALASKA AND NEVADA

Amateur Radio antenna bills have made significant legislative headway in Alaska and Nevada. The Alaska bill is on its way to the governor, while the Nevada measure has cleared the Assembly and is bound for the state Senate.

Alaska Section Manager Kent Petty, KL5T, reports that Senate Bill 78 passed the House of Representatives 37-0 on April 19 after clearing the House Community and Regional Affairs Committee. The measure now goes to Gov Tony Knowles for his signature, and Petty says he's confident the governor will sign the bill.

The Alaska Senate had passed SB 78 in March on a 20-0 vote. The bill, "An Act Relating to Municipal Regulation of Radio Antennas," was introduced by Sen Robin Taylor of Wrangell. It would incorporate the wording of the limited federal preemption known as PRB-1--calling on localities to "reasonably accommodate" amateur antennas--into Alaska's state statutes. It also includes a schedule of antenna heights, below which municipalities could not regulate, and it includes a "grandfather" provision to protect existing towers should a municipality enact a restrictive antenna ordinance.

The Alaska bill's three-tier minimum regulatory height schedule depends on local population density and lot size. Municipalities would not be permitted to further regulate antennas shorter than 75 feet in areas with a population density of more than 120 people per square mile. A minimum regulatory height of 140 feet would prevail in areas with a population density of more than 120 people per square mile on a lot of an acre or more. The top-tier 200 feet minimum regulatory limit would apply where the population density is 120 people or less per square mile.

More information on SB 78 is available at the Alaska Legislature Web site, http://www.legis.state.ak.us/.

There's good news and not-so-good news about Nevada's amateur antenna bill, Assembly Bill 61. On April 12, the Nevada Assembly Government Affairs Committee acted to remove sections of AB 61 that dealt with deed restrictions. Those sections of the bill would have prohibited antenna restrictions from future deed covenants, conditions and restrictions--or CC&Rs--in Nevada.

On the plus side, Nevada Assistant Section Manager Dick Flanagan, W6OLD, reports that the Committee referred the amended bill to the full Assembly with a recommendation to approve it. The Assembly passed the measure April 19 on a 40-0 vote. Left intact were sections that would add the wording of the limited federal preemption known as PRB-1 to the Nevada Revised Statutes. The bill now goes to the Nevada Senate. "We'll be rounding up the troops in support," said Nevada Section Manager Jan Welsh, NK7N.

Flanagan concurs that the battle isn't over. "While we have achieved a major milestone by passing the Nevada Assembly, we are still anticipating a fight from the local government associations in the Senate," he said. Flanagan has urged amateurs there to make their feelings known on the bill by sending e-mail or letters to their local lawmakers and by recording their opinions with the Nevada Legislature's "Share Your Opinion" page, http://www.leg.state.nv.us/71st/opinions/ or by telephone.

The Carson Valley Radio Club Web site, http://www.cvrc.net/ab61/, and the Nevada Legislature's Web site, http://www.leg.state.nv.us/, have more information.--Kent Petty, KL5T; Dick Flanagan, W6OLD

==>MISSISSIPPI, ALABAMA YOUNGSTERS ENJOY ARISS SPACE CHATS

Youngsters at schools in Mississippi and Alabama have had a chance to chat via Amateur Radio with the two US crew members of International Space Station. The contacts were arrange by the Amateur Radio on the International Space Station--or ARISS--program. Astronaut Susan Helms, KC7NHZ, spoke last week with Vicksburg (Mississippi) High School students, while her astronaut colleague Jim Voss took a turn at the NA1SS mike this week during a contact with youngsters at Admiral Moorer Middle School in his home state of Alabama.

After a couple of false starts, nine Vicksburg High School students finally got to meet Helms on the air on April 11. "The contact was near perfect," said Bill Ford, W5WAF, a member of the Vicksburg Amateur Radio Club

committee that helped set up the equipment for the contact. Two previous QSO opportunities had to be scrubbed because of the ISS crew workload.

Initially anticipating a direct contact with NA1SS, the Vicksburg ARC had installed antennas and equipment at the high school. As things turned out, the contact ended up being telebridged through the Sacred Hearts Academy station in Honolulu, Hawaii. Audio was handled via special telephone circuits.

The students fired off 18 questions, ranging from the salary of an astronaut to the sensation of riding the shuttle to orbit. One student who happens to be 6 feet 3 inches tall asked about the height requirements for astronauts. Helms told senior Christopher Withrow that the height restriction is 6 feet 4 inches. Withrow said he's still growing.

Vicksburg ARC President Eddie Pettis, N5JGK, called the contact a very successful community-wide effort. The event also got excellent media coverage.

On April 16, youngsters at Admiral Moorer Middle School in Eufaula, Alabama, worked the ISS through a telebridge with ground station NN1SS at the Goddard Space Flight Center in Maryland. Youngsters managed to complete their entire list of two dozen questions, several focusing on the health effects of being in space.

One youngster asked what Voss would do if he got sick during his stay aboard the ISS. He explained that he and Helms were the medical team during the Expedition 2 crew mission and that if one became ill, the other would provide treatment. Voss said the crew can talk with a physician on Earth if they need help.

Voss also told the students in Alabama that the body adjusts to the lack of gravity by using visual cues rather than the inner-ear to determine balance. Voss also said that he considered research in the field of radiation monitoring very important to opening the way for colonizing space.

ARISS mentor Randy Becnel, W5UE, worked with both the Vicksburg and Moorer ARISS teams.

The Moorer school QSO was scheduled at Voss's request. Helms and Voss have participated in several ARISS school contacts since coming aboard the ISS in March. The Expedition 2 Commander is Russian cosmonaut Yury Usachev, UA9AD. The next tentatively scheduled ARISS contact is with Parkway Central High School in Chesterfield, Missouri, later this month.--thanks to Bill Ford, W5WAF, Allen White, WB4MIO, Will Marchant, KC6ROL; The Vicksburg Post, and MSNBC

==>DAVID CLARK, KB6TAM, IS BACK ON THE HIGH SEAS

Call him persistent, even stubborn, but don't call him a quitter, and don't count him out. Rebounding from the February 7 disaster that sank his first sailboat, the Mollie Milar, David Clark, KB6TAM, again set sail April 11 from Cape Town, South Africa, in a new boat. His goal is to become the

oldest person to sail solo around the world. Clark will turn 77 on May 17.

The February maritime disaster in which his sailboat sank also claimed the life of his beloved canine companion, Mickey, who was lost at sea during the rescue. Clark has named his new vessel Mickey in the dog's memory. The new boat is a 34-foot fiberglass hull vessel.

Now some 800 miles out of Cape Town, Clark has been keeping a daily ham radio schedule with the Pacific Seafarer's Net on 20 meters, according to Bob Reed, N6HGG. The net has been running phone patches so that Clark can speak with his wife. Clark's next port of call is St Helena, where he will take on water and supplies. He expects to reach there in about 10 days. Reed says Clark has been keeping a daily schedule on 14.245 MHz at around 1400 UTC. He's also keeping in touch with South African hams at 1500 UTC on 14.195 MHz.

Clark says he expects to be back in Ft Lauderdale, Florida--where his journey began in December 1999--sometime between the middle of June and the first of July. While Clark has some corporate sponsors, he's been funding his trip largely out of his Social Security income and his occasional clarinet gigs.

For more information on David Clark's journey, visit http://www.dclark.com and http://www.captainclark.com.

==>QST TECHNICAL EDITOR PAUL PAGEL, N1FB, RETIRES

ARRL Headquarters staff member and well-known QST technical editor Paul Pagel, N1FB, has retired. Pagel, who turned 63 this month, was on the HQ staff for nearly 22 years. In his capacity as a senior assistant technical editor, Pagel prepared much of QST's technical content for publication. He also handled the popular "Technical Correspondence" column.

Outgoing QST editor Mark Wilson, K1RO, who's now ARRL's chief operating officer, says the QST editorial team won't be the same without Paul Pagel. "He's helped countless authors polish their articles for the magazine," Wilson said. "He also helped train a number of ARRL technical editors over the years--including me. I still remember Paul's patient advice and guidance as I worked on my first articles for the magazine. We'll miss him."

A ham since 1958--when he went from ground zero to Conditional class (K1KXA) in one leap--Pagel says he can't remember when he was not interested in Amateur Radio. Growing up in New Britain, Connecticut, he taught himself the Morse code at age 16. "I got a J-38 key for $1 at a rundown radio-TV shop," he said, "and I learned the Morse code by listening to the clicks of the key, because I didn't have a code oscillator." This gave him a leg up when he joined the Air Force right out of high school and became a ground radio operator in Germany. While overseas, he also met his wife, Karin. The couple now lives in Enfield, Connecticut. Their son, Eric, is a police officer. Following the service, Pagel went to the FCC office in Boston one day and upgraded all the way to Amateur Extra in a single sitting. After graduation from Ward School of Electronics in Hartford, he went to work for IBM.

Prior to coming to work in the old Technical Department at ARRL, Pagel spent 12 years as an engineer at WWLP-TV in Springfield, Massachusetts. He learned of that opening from a fellow ham. Pagel said that making the jump from his TV job to ARRL in June 1979 meant "a huge cut in pay," but writing and editing in a ham radio environment were what he'd always wanted to do.

"I immediately took over the 'Product Review' column," he said. "That was scary!" He cites as one of his major contributions convincing then-ARRL General Manager Dick Baldwin, W1RU, to purchase state-of-the-art test gear for the ARRL Lab to conduct routine evaluations of new Amateur Radio products. "That was the turning point for 'Product Review'," he said.

Over the years, Pagel has enjoyed several facets of hamming, including CW--his first love--AM, SSB, RTTY and weather satellites. During his ARRL tenure, he collaborated with ARRL Technical Advisor Ralph Taggart, WB8DQT, on the first edition of the Weather Satellite Handbook. He also enjoyed building his own gear. An ARRL Life Member, Pagel said he hopes to get back into the hobby, now that he has more time and isn't involved with it professionally.

==>SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: Solar flux and sunspot numbers have been declining, but still there is plenty of activity to keep geomagnetic conditions active. Mean daily sunspot numbers declined by nearly 60 points this week over last, and average solar flux was down nearly 44 points. Sunspot numbers were down to the double instead of triple digits this week, with Tuesday through Thursday sunspot numbers at 89, 63 and 85. Sunspot numbers were last in the double digits about a month ago.

The large sunspot that caused so much excitement a few weeks ago now is visible again and about to rotate into full view. Daily solar flux probably bottomed out on Monday at 123.4, and the latest forecast has solar flux for Friday through Monday at 155, 165, 175 and 185. Solar flux is expected to peak somewhere around April 27 or 28 at 230. Of course, new activity could change this. After all, when solar flux peaked at 273 and 274 on March 27 and 28 the best guess a week earlier was that solar flux would peak around 180 on those dates.

Last Friday a strong geomagnetic storm was triggered by an interplanetary shock wave. This followed a couple of days of similar effects from coronal mass ejections. Then on Sunday, one of the most powerful solar flares ever recorded was observed, but it was near the sun's western limb and aimed mostly away from Earth. Some bands closed down entirely!

Another interplanetary shock wave struck Earth on Tuesday. This has been quite a week for auroras. The most disturbed day this week was Wednesday, when planetary A index was 50 and the planetary K index reached 7 over two periods. This came one week after another severe disturbance, when the planetary A index was 60 and the high latitude College A index was 100.

Sunspot numbers for April 12 through 18 were 159, 138, 149, 100, 107, 89 and 63 with a mean of 115. The 10.7 cm flux was 149, 137, 138.7, 134.2, 123.4,

126.1 and 131.8, with a mean of 134.3. Estimated planetary A indices were 38, 36, 15, 13, 7, 7 and 50 with a mean of 23.7.

==>IN BRIEF:

* This weekend on the radio: The TARA Spring Wakeup PSK31 Rumble, the YU DX Contest; the EU Spring Sprint (CW), the Michigan and Ontario QSO parties, and the Holyland DX Contest are the weekend of April 21-22. The 432 MHz Spring Sprint and the Harry Angel Memorial Sprint are April 25; the DX YL to NA YL Contest (SSB) is April 25. JUST AHEAD: The Florida and Nebraska QSO parties and the Six Meter Sprint are the weekend of April 28-29. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info..

* Correction: Operation from K6KPH for International Marconi Day from the original transmitting and receiving stations of ex-RCA coast station KPH. Operation will begin at 2100 UTC Saturday, April 21. The time was reported incorrectly in The ARRL Letter, Vol 20, No 15 (Apr 13, 2001). Details about International Marconi Day are available on the Cornish Radio Club Web site, http://www.users.globalnet.co.uk/~straff/ . More information about the Maritime Radio Historical Society is at http://www.radiomarine.org .

* ARRL seeks chief development officer: The ARRL seeks an experienced fund-raising professional to serve as its chief development officer. This position is at ARRL Headquarters in Newington, Connecticut. Reporting to Chief Executive Officer David Sumner, K1ZZ, the CDO will create fund-raising strategies, implement and solidify structure and provide experienced leadership and vision in support of program development, advocacy and ongoing operations. This individual will involve and educate the organization's CEO, Board of Directors, staff and volunteers as well as the Foundation Board in attaining philanthropic support for ARRL. Emphasis will be placed on strategic planning, annual fund activities, planned giving, major gifts and corporate relations. Candidates must have at least 5 to 10 years of professional fund-raising experience. This is a unique opportunity to build a development program, to make a crucial difference to the ARRL community and to strengthen its position well into the 21st century. Qualified candidates should e-mail or mail a resume and a letter of interest to executive recruiter Belinda Benincasa, bbenincasa@astbryant.com or Stefanie Borsari, sborsari@..., or write c/o AST/BRYANT, 1 Atlantic St, Stamford, CT 06901.

* Reminder: Amateurs attending the National Association of Broadcasters Convention in Las Vegas next week are invited to the 2001 Amateur Radio Operator's Reception. This year's reception, sponsored by Kenwood Communications Corp and CQ magazine, will be held Wednesday, April 25, 6-8 PM, in Ballroom C of the Las Vegas Hilton. Hundreds of amateurs involved in all areas of the broadcast industry get together at this annual event, organized by John Marino, KR1O, NAB Vice President, Science & Technology.

* First Tuna Tin 2 WAS claimed: When the Tuna Tin 2 low-power transmitter article appeared in QST in 1976 (http://www.arrl.org/tis/info/pdf/7605014.pdf), its author Doug DeMaw, W1CER (later W1FB), envisioned it as a weekend project that could be used for short-range contacts. Now, a quarter of a century later, a Canadian amateur has claimed the first Tuna Tin 2 Worked All States Award! Steve McDonald, VE7SL, got caught up in "Tuna Tin 2 Mania" and bought one of the popular TT2 kits. After working about 30 states with the little rig, WAS suddenly seemed plausible. McDonald realized his dream several months later when he turned in his cards for WAS. All contacts for the award had been completed while he was running about 400 mW from a Tuna Tin 2. As far as the ARRL awards folks know, this marked the first time WAS was achieved with a Tuna Tin 2--although there is no special endorsement for having done so. "Doug DeMaw knew in his heart that the rig would be useful and popular, but I don't think he ever envisioned that this little transmitter would still be working its QRP magic over 25 years after it first appeared in the pages of QST," said ARRL Lab Supervisor Ed Hare, W1RFI--himself a QRP and TT2 aficionado who has promoted the Tuna Tin 2 Revival and was McDonald's Connecticut contact for WAS. Congratulations to VE7SL on a tremendous operating accomplishment.--Ed Hare, W1RFI

* CQ Contest and DX Hall of Fame inductees for 2001 announced: CQ magazine has announced its 2001 inductees into the CQ Contest and CQ DX halls of fame. Algis Kregzde, LY2NK, and Ron "Sig" Sigismonti, N3RS, were named to the CQ Contest Hall of Fame. Robert Allphin, K4UEE, and Robert Eshleman, W4DR, join the roster of the CQ DX Hall of Fame. Kregzde is a coach, leader and coordinator of the Lithuanian National HF Team, president of the Lithuanian Radio Sports Federation and vice president of the international European Radio Sports Federation. Sigismonti has been contesting for four decades and is past president of the Frankford Radio Club, which nominated him. Allphin, a member of the 1996 and 2000 US WRTC teams, was nominated by the Southeastern DX Club. Eshleman, the recipient of the 2000 ARRL Clinton DeSoto DXCC Challenge Cup, is a past chairman of the ARRL DX Advisory Committee. He holds Five-Band DXCC certificate No 1. He was nominated by the Tidewater DX Club, the Flanders DX Club, and UBA--Belgium's national Amateur Radio society. Induction ceremonies will be held at the Dayton DX and Contest banquets.--CQ news release

* SETI League bouncing signals off moon: With financial assistance from the American Astronomical Society, The SETI League Inc has placed on the air a transmitter that bounces microwave signals off the moon's surface for use in testing Earth-based radiotelescopes. Operating on 1296 MHz under the call sign W2ETI, the EME beacon enables amateur and professional radio astronomers to calibrate their receiving systems by providing a stable reference signal from a known point in the sky. The SETI League's EME beacon received its first shakedown in March, providing scientists at the Arecibo Observatory in Puerto Rico with a weak, well-calibrated test signal for use in conjunction with the Project Phoenix targeted search for extraterrestrial intelligence. Project Phoenix scientists had formerly used a microwave transmitter aboard the Pioneer 10 spacecraft for this purpose. Twenty nine years after its launch, Pioneer 10 is now outside our solar system, seven billion miles from Earth, and its 8 W beacon is too weak to be

received--even by Arecibo. The SETI League promotes a privatized search for extra-terrestrial intelligence. The organization boasts more than 1200 members in 60 countries, many of the Amateur Radio operators. Its executive director is Paul Shuch, N6TX. For more information, visit the SETI League Web site, http://www.setileague.org/ .

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

==========================================================
==>AO-40 TRANSPONDER OPERATION POSSIBLE THIS SUMMER

AMSAT-NA President Robin Haighton, VE3FRH, this week raised the possibility
that AO-40 could inaugurate transponder operation this summer, if tests and
orbital maneuvers between now and then go as planned.

"We are learning how to fly this thing," Haighton said. "But I still think
we're going to end up with a darned good satellite."

The most likely initial transponder configurations, Haighton said, would be
Mode L/S--1.2 GHz up and 2.4 GHz down, Mode U/S--435 MHz up and 2.4 GHz
down, and possibly Mode V/S--145 MHz up and 2.4 GHz down.

Recent data suggest that the mid-December incident that silenced AO-40 for
two weeks and rendered some systems unusable also might have blown a hole on
the 400-newton motor side of the spacecraft. "Speculation is there could be
damage, and sunlight is getting right in," Haighton said. He noted that
```

ground controllers have detected a distinct rise in temperature when sunlight strikes that side of the satellite. The speculated opening was not causing any major problems, he said, but it could explain why efforts to adjust AO-40's attitude via magnetorquing have been unpredictable.

As the AO-40 recovery effort continues, Haighton said, ground controllers plan to raise the height of the perigee in the very near future. That process, using the onboard arc-jet motor, could take up to several weeks. The AO-40 team hopes the maneuver will minimize or eliminate possible effects on the satellite's orbit caused by atmospheric expansion at the peak of the solar cycle.

AO-40 currently is approximately 320 km--almost 200 miles--above Earth at perigee--its closest point--and some 51,000 km--some 31,600 miles--at apogee. Plans call for raising the orbit at perigee to around 520 km, or some 320 miles. The maneuver would "hardly affect" the satellite's apogee, Haighton said. The arc-jet would be operated without electrically igniting it, using the pressure of the ammonia fuel alone.

Once the orbit has been adjusted, ground controllers would orient the spacecraft's attitude and check out the various onboard transmitter and receiver systems to see what works and what does not. "We're still pretty confident that the 2 meter and 70 cm transmitters are not there," Haighton said, "but we're equally confident that the receivers for those bands still are."

The satellite has been transmitting telemetry on the 2.4 GHz (S-2) beacon, and signals reportedly have continued to improve--although the beacon has been out from time to time as needed to conserve power during eclipse periods.

==>WRTC 2002 TO BE HELD IN FINLAND

The next World Radiosport Team Championship--which some characterize as the "Olympics of Amateur Radio"--will be held next year in Finland. A formal announcement came April 21 during the International DX Convention in Visalia, California.

WRTC 2002 will be jointly organized by Contest Club Finland and the Finnish Amateur Radio League (SRAL). The on-air competition will take place July 13-14, 2002, in conjunction with the IARU HF Championship.

Last held in Slovenia in July 2000, the WRTC involves on-air contest-style competition among two-person teams operating from the same geographical vicinity at stations having equivalent capabilities. All operation is done at 100 W with modest antennas.

The WRTC 2002 Organizing Committee Chairman is Jouko Häyrynen, OH1RX. Sharing duties in chairing the competition will be Martti Laine, OH2BH, and Pasi Luoma-aho, OH2IW, both world-class contesters. Ari Korhonen, OH1EH, who's handling WRTC 2002 publicity, was paired with OH1NOA on Team Finland, which finished fifth at WRTC 2000.

Team selection will begin soon. Considered likely contenders next year are WRTC 96 and WRTC 2000 winners Dan Street, K1TO, and Jeff Steinman, N5TJ. Participants from all continents will be selected based on their track-records in past contests. Korhonen said every effort would be made to provide teams with comparable operating conditions. "Our plan is to have 45 to 50 station sites set up in locations around Helsinki, each equipped with identical antenna systems," he said.

The WRTC 2002 Web site is http://www.wrtc2002.org.

==>ISS PARTNERS GRANT FLIGHT EXEMPTION FOR DENNIS TITO, KG6FZX

The International Space Station Partnership has granted an exemption for the flight of American businessman Dennis Tito, KG6FZX, to the ISS aboard a Russian Soyuz 2 taxi mission. Russia already had given Tito the go ahead to visit the ISS as part of a three-man team on the 10-day Soyuz mission, scheduled to begin April 28. NASA has extended the shuttle Endeavour visit to the ISS by at least a day as the space station crew resolves computer problems and recommended that Russia postpone the Soyuz mission.

A NASA statement said that following "intense and extensive consultations" among all space station partners, the Multilateral Coordination Board "achieved consensus on the proposed Tito flight." A former Jet Propulsion Lab engineer, Tito, 61, reportedly has agreed to pay the Russian space program $20 million for the privilege of becoming the first "space tourist."

The public relations value of Tito's imminent visit was not lost on the Board. "It is understood that Mr. Tito will contribute to the formation of positive public opinion about the ISS program and the ISS partnership," its meeting report concluded.

There are conditions to Tito's visit. He reportedly has agreed that neither he nor his heirs will hold NASA liable for anything that might happen to him on board and that he will pay for anything he might damage. A NASA task force has recommended that Tito have an astronaut escort to visit the US sectors of the ISS and that he sleep near the Soyuz escape vehicle in case an emergency arises.

During Tito's visit, the crew of Russian Commander Yury Usachev, UA9AD, and US astronauts Susan Helms, KC7NHZ, and Jim Voss, is expected to adopt a minimal work routine and maintenance schedule.

Initially, NASA had vigorously opposed allowing Tito to fly to the ISS at this time and had suggested putting the mission off until later this year. NASA said the Board agreed that no ISS partner would propose to fly another "non-professional crewmember" until the ISS partnership had finalized and adopted detailed crew criteria. Those criteria are to be in place by June.

Tito has been in Russia training to go into space. He took and passed the Technician exam earlier this month.

NASA sources have said that Tito will have access to the ARISS amateur gear on a "non-interference basis"--meaning that he must not interfere with the crew's work or sleep schedules. At this point, the ham gear is installed in

the module that doubles as sleeping quarters for some of the crew. Tito is not scheduled to be involved in any ARISS school contacts--such QSOs normally are not scheduled during docked operations anyway, because the crew is too busy--but it's expected that he may use ham radio to keep in touch with his family. He's also indicated a preference for packet over FM voice.

==>MISSIONARY-HAM, INFANT, DIE WHEN PLANE IS DOWNED IN PERU

A missionary from Michigan, killed after the plane in which she was a passenger was shot down last week in Peru, was an Amateur Radio operator. The Harrisburg, Pennsylvania-based Association of Baptists for World Evangelism, identified the dead as Veronica "Roni" Bowers, 35, and her infant daughter, Charity, seven months. Roni Bowers was KD4CKM, a Tech Plus licensee.

The Cessna 185 float plane ditched in the Amazon River after being fired upon. Bowers' husband, Jim, and their son, Cory, 6, were not seriously injured in the incident. Jim Bowers is KD4CKN, a General licensee. Pilot Kevin Donaldson was shot in the leg in the incident but survived.

The Bowerses, from Muskegon, Michigan, had been serving in Peru since July 1993. News accounts say the Peruvian Air Force shot down the plane carrying the missionaries in the Amazon jungle April 20. The Peruvian military said it opened fire after the pilot ignored warnings to land, but that claim is disputed.

A communiqué from the Peruvian Ministry of Defense said that the Peruvian Air Force "deeply regrets the loss of human life." It said its actions were part of its anti-drug operations procedures. Reports say a US military aircraft associated with anti-drug trafficking operations first spotted the Cessna but told the Peruvians the plane might be legitimate.

An investigation continues. Funeral services for the mother and infant were set for April 27 in Michigan.

==>KANSAS HAMS RESPOND IN TORNADO'S AFTERMATH

Several dozen Amateur Radio Emergency Service members turned out to help in the wake of an F4 tornado that ripped through the small Central Kansas town of Hoisington April 21. The surprise twister left one dead, dozens injured and millions of dollars in damage. A weather-spotting ARES net active prior to touchdown had received reports of a funnel cloud at Hoisington, but the National Weather Service had issued no tornado warnings.

Kansas District 5 Emergency Coordinator Bob Haneke, WG0Q, says storm spotter Larry Bruce, KC0IFO, called in a report of extensive damage in Hoisington and said help was needed. Haneke first checked on his brother, who lives in Hoisington, then headed out. Barton County Emergency Coordinator Carl Anderson, N0ORS, activated an ARES emergency net on the 146.76 repeater. Then, accompanied by his wife and two sons--all hams--Anderson and several other amateurs established initial emergency communications from Hoisington. Others helping in Hoisington included ARRL Midwest Division Vice Director

Bruce Frahm, K0BJ.

The town of about 3000 is located some 100 miles northwest of Wichita and just north of Great Bend in Barton County. The storm took the roof off the Hoisington High School auditorium, and gutted a strip mall, the town's only grocery store, and a Dairy Queen where some people took shelter in a walk-in freezer. Also heavily damaged was Hoisington's hospital. Its patients had to be relocated to Great Bend or to the local nursing home, which had no power or telephone. Later, severe flooding swamped sections of the town that the tornado had skipped.

At one point early on, Haneke said, the only link parts of Hoisington had with the outside world was via Amateur Radio VHF to the emergency operations center in Great Bend. "The outgoing phone line trunk had been damaged," he said, "and cellular phones in the area were useless, as the system was grid-locked."

Amateurs assisted in several ways during the relief effort. Haneke says hams provided communication support to several responding agencies, including the American Red Cross, the Salvation Army and Adventist Community Services. Hams also provided primary or back-up communication for hospital facilities and shelters and assisted the Red Cross with damage assessment. In addition, HF and VHF links were established to handle health-and-welfare traffic. The Golden Belt Amateur Radio Club dispatched its emergency communications bus.

Haneke says that as power and telephone service were restored to the community on April 24, amateur operators were able to stand down from active duty, and the ARES emergency net was deactivated that afternoon. A contingent from the Salvation Army Team Emergency Radio Network (SATERN) remained in Hoisington to handle additional requests and to support Salvation Army relief efforts. Frahm said amateurs also still were assisting at the nursing home, municipal building and hospital area.

==>ASTRONAUT MAKING CASUAL QSOS FROM NA1SS

Astronaut Susan Helms, KC7NHZ, recently put smiles on the faces of a number of US hams. Reports from several amateurs indicate that she's made several casual voice contacts from her perch aboard the International Space Station.

Mike Seguin, N1JEZ, was one of the stations who made contact with Helms on April 20. He reports she had a great signal. Also reporting contacts were Tom Blubaugh, N7HXP, Samuel Danner, N3MPE (who worked NA1SS for the second time), and Stan Vandiver, W4SV (who posted audio from his QSO on his Web site, http://stan.vandiver.com). Helms also was active on April 23. Several stations have managed to connect with the ISS packet system, still operating as "NO CALL". Bruce Paige, KK5DO, reports he worked a male operator at the NA1SS mike on April 25.

As of April 27, the ARRL had received QSL card requests for two Expedition One FM voice contacts and four Expedition Two FM voice contacts (along with several dozen SWL reports for both missions), plus eight "NO CALL" packet encounters.

With the STS-100 mission under way, four of the five space agencies involved in building the space station are now represented on board. Endeavour's crew includes Italian Umberto Guidoni of the European Space Agency, Russian Yuri Lonchakov--who's been granted the call sign RS1ISS--and Canadian Chris Hadfield as well as US astronauts Kent Rominger, Jeffrey Ashby, John Phillips and Scott Parazynski, who's KC5RSY.

Endeavour docked with the ISS April 21. It's return flight was delayed at least a day and possibly two because of the ISS computer difficulties. It's not known if either of the hams from Endeavour planned to do voice QSOs while aboard the ISS. There is no amateur gear installed aboard the shuttle.

Here are the QSL routes for W/VE stations working NA1SS: US stations QSL to Margie Bourgoin, KB1DCO, ARRL, 225 Main St, Newington, CT 06111. Canadian stations QSL to Radio Amateurs of Canada, 720 Belfast Rd--Suite 217, Ottawa, ON K1G 0Z5. A self-addressed, stamped envelope is required to get a QSL in return.--ANS; news reports

==>HUDSON DIVISION DELEGATION PROMOTES ANTENNA BILL IN CAPITAL

A delegation of four from the ARRL Hudson Division recently trekked to the state capital of Albany on April 17 to garner support for New York's Amateur Radio antenna bill. Hudson Division Director Frank Fallon, N2FF, reports the group met for nearly five hours with Assembly and Senate members and staffers as well as with Gov George Pataki's assistant counsel Greg Allen.

An effort to incorporate the wording of the limited federal preemption known as PRB-1 into New York's statutes fell short of its mark last year. Fallon says he's more optimistic this time around, now that companion bills have been introduced in the Assembly and Senate, designated A 1565 and S 2893. Accompanying Fallon on the visits were Assistant Hudson Division Directors Gerry Agliata, W2GLA, and Diane Ortiz, K2DO, and Eastern New York Local Government Liaison Ray Wemple, KA2DVM.

During the visits, Fallon said, the delegation explained that a state antenna bill was needed to supplement PRB-1, since many local town and villages seem unaware of PRB-1 or ignore its provisions. "We explained how our bills would save local governments time and money and avoid confrontation among neighbors over a very technical issue few local legislators fully understand," he said. Fallon said the group likened Amateur Radio operators to volunteer firemen who, rather than responding to fires "respond to communications emergencies when the lights go out and phones go dead."

"Those we spoke to seemed receptive to our arguments," Fallon said, "and one assemblyman said that his committee would again report our bill out as it had done last year." Fallon predicted that Gov Pataki--a former ham (ex-K2ZCZ)--will almost certainly sign the bill when he receives it."

Fallon encouraged support from New York amateurs. "Letters, phone calls and visits are much more effective than e-mails," he said. The Hudson Division Web page http://www.arrlhudson.org has a copy of the bill, links to find names and addresses of state representatives, and copies of sample letters.

==>SOLAR UPDATE

Heliophile Tad Cook, K7VVV, Seattle, Washington, reports: After bottoming out on April 16 at 123.4, solar flux is on the rise. Average flux values for this week were up more than 50 points, and activity continues to rise with the return of sunspot region 9393.

Solar flux is expected to peak this weekend around 210, but a rise in geomagnetic activity due to a large M7-class solar flare on April 26 is expected on Sunday. This flare was from sunspot 9393, which also hurled a full-halo coronal mass ejection. This sunspot covers about half the area that it did when it was on our side of the sun last month, but it is still quite large. Last month it produced the largest solar flare ever recorded--which fortunately was not pointed toward Earth.

On Monday an enormous prominence--a filament of cool dense gas suspended above the sun--extended over the sun's southwestern limb. You may still be able to view a photo from the Solar and Heliospheric Observatory at http://spaceweather.com/images2001/23apr01/20010423_1837_eit_304_big.gif .

Sunspot numbers for April 19 through 25 were 85, 103, 156, 164, 140, 175 and 182, with a mean of 143.6. The 10.7 cm flux was 144.5, 180.4, 191.1, 192.5, 196.4, 193.5 and 193.9, with a mean of 184.6. Estimated planetary A indices were 7, 8, 7, 28, 21, 8 and 7 with a mean of 12.3.

==>IN BRIEF:

* This weekend on the radio: The Florida and Nebraska QSO parties and the Six Meter Sprint are the weekend of April 28-29. JUST AHEAD:
See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* ARECC on-line course full: The April ARRL on-line Emergency Communications Level I classes now are closed to further enrollments. If you missed out, two new classes will open in mid-May. In the meantime, watch the ARRL Web site for the latest information on the ARRL Certification and Continuing Education Program.

* McGan Award entry deadline looms: The deadline to receive nominations for the 10th annual Philip J. McGan Memorial Silver Antenna Award is 5 PM, Friday, May 25. The McGan Award goes to an individual who has achieved volunteer public relations success on behalf of Amateur Radio, exemplifying the efforts of Phil McGan, WA2MBQ (SK). Nominating someone for this award is the perfect way to recognize an ARRL Public Relations Coordinator, Public Relations Officer or club PR appointee for his or her dedication to the promotion of ham radio on the local, regional or national level. For more information about the McGan Award, see February QST. Entry forms and the award program guidelines are available on the ARRL Web site, http://www.arrl.org/pio.

* A weekend's work compressed into two hours at Visalia: Three ARRL staffers and 18 volunteers from California DX clubs combined their talents to field

check 83 DXCC applications during the 52nd annual International DX Convention in Visalia, California, April 20-22. The task of checking the approximately 5000 QSL cards typically would take the equivalent of an entire weekend. But this year, 21 card checkers showed up and whittled a weekend's work down to an astonishing two hours! Ken Anderson, K6TA, organized the project. The Northern California DX Club-this year's convention sponsor-and the Southern California DX Club take turns organizing the convention. The Redwood Empire DX Association assisted. More than 600 registered for this year's event. ARRL President Jim Haynie, W5JBP, encouraged those assembled to stress membership recruitment in their respective clubs. Other ARRL officials attending included Vice President John Kanode, N4MM, Southwestern Division Director Fried Heyn, WA6WZO, and Pacific Division Director Jim Maxwell, W6CF, plus other section and division volunteers. Membership Services Manager Wayne Mills, N7NG, participated in the DX Forum moderated by DXAC representative Jack Troster, W6ISQ. ARRL Contest Branch Manager Dan Henderson, N1ND, participated in the Contest Forum moderated by Bob Wilson, N6TV.

* Ham helps his "Elmer" in health emergency: Kansas Section Emergency Coordinator Joseph Plankinton, WD0DMV, reports that a new ham in his section recently got to return a favor for the amateur who'd helped him get his license--his "Elmer." On April 5 Conrad Lauck, KC0JUV, of Topeka was enjoying a QSO on a local repeater with his old friend Wayne Peterson, KB0AMY, 55 miles away in Horton. Both hams are blind, and Peterson is a diabetic. During the contact, Peterson mentioned that he was not feeling well, and, as the conversation progressed, his speech began to slur. Finally, Lauck heard Peterson key his microphone but not speak, and he knew his friend was in trouble. He contacted authorities in Horton to check on Peterson, who apparently had suffered a health emergency. An ambulance was called, and the crisis was averted.

* Hosstraders has moved! The popular Hosstraders event--considered the premier hamfest in New England--has moved again. Originally held in Deerfield, New Hampshire, the Hosstraders event shifted venue to Rochester, New Hampshire, several years ago. Starting with the May 4-5 event, the Hosstraders will move to the Hopkinton State Fairgrounds, located off I-89 (Exit 7), in Hopkinton, New Hampshire. "We are excited about this big step forward," says organizer Joe DeMaso, K1RQG. "Those of you who miss the old days at Deerfield will be especially happy with the look of our new home." The Hosstraders location change to Rochester led many hams to dub the event "Deerchester." Now, some are starting to call it "Deerkinton" as a result of the latest move. More information is available on the Hosstraders 2001 Web site, http://www.qsl.net/k1rqg.

* Submarines on the air: The Submarine Veterans Amateur Radio Association will sponsor its fifth annual Submarine Memorial Radio Reactivation Day April 28-29 in honor of the 101st anniversary of the US Navy Submarine Service. More than 50 subs were on the air around the world for last year's event. Submarines on the Air will run from April 28 at 0600 UTC until April 29 at 2359 UTC. Among subs which will be "radio-active" are the Cobia in Manitowoc, Wisconsin, with the ManCoRad Radio Club, Fred Neuenfeldt, W6BSF,

operating, the German U-505 at the Museum of Science and Industry in Chicago, and the WA3KEY/2 operation from the conning tower of the nuclear guided missile submarine USS Growler (SSG-577) in New York's Hudson River. Suggested operating frequencies: AM/SSB, 3.943, 7.243, 14.243, 21.313, and 28.343 MHz; CW up 43 kHz from the lower band edge. For a Submarine Veterans Amateur Radio Association certificate, send copies of at least four QSLs from participating subs to Jim Flanders, W0OOG, 1539 California Trail, Plano, TX 75023-4300; e-mail jaf@.... Visit Jim Flanders' Tubes Forward Web site, http://w0oog.50megs.com/ .

* Vote on QST Cover Plaque Award: The winners of the QST Cover Plaque Award for April was Frank N. Musso, WA5QHV, for his article "Laser Generated Antennas." Congratulations, Frank, for a great April Fool spoof! ARRL members are reminded that the winner of the QST Cover Plaque award--given to the author(s) of the best article in each issue--is determined by a vote of ARRL members. Voting takes place each month on the ARRL Members Only Web site at http://www.arrl.org/members-only/qstvote.html. As soon as your copy arrives, cast a ballot for your favorite article in the May issue of QST. Voting ends May 15.

* Smithsonian "Space Day" to include ham satellites: Amateur Radio satellites will be on display at the Smithsonian's National Air and Space Museum in Washington, DC, in conjunction with the museum's "Space Day" activities on May 3. Young people who attend The Radio Amateur Satellite Corporation's (AMSAT) display, can take a crack at building their own MicroSats as they learn more about Amateur Radio and amateur satellites. "Our goal is to interest students in entering careers in the technical fields," says AMSAT Vice President Perry Klein, W3PK. The AMSAT display will be located in the Air and Space Museum's Space Race Gallery 114 and will run from 11 AM until 3 PM.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

178. Annual General Meeting & Annual Dinner.

Yahoo group: m_a_r_s
Date: 2001-04-29 16:45:43 UTC
From: vu2nlf
Topic: 178 Message: 178

Ref:MARS/NLF/37 27th April 2001

Sub : The First Annual General Meeting and Annual Dinner.

DEAR MEMBERS,

We are pleased to inform you that the First Annual General Meeting of our Society, The Elections for the Second Managing Committee and The Annual Dinner shall be held on 1st May 2001.

Venue : 'Green Room', Garware Club House, Wankhede Stadium 'D' Road, churchgate, Mumbai - 400 020.

Timing: 7:30 pm to 10:30pm

Agenda for the Meeting.

7:45pm Chairperson's Report.

8:00pm Secretary's Progress Report.

8:15pm Treasurer's Financial Report.

8:30pm Reports from other Members of the Managing Committee

8:45pm Plans and proposals for the year 2001 - 2002.

9:00pm Voting for the Second Managing Committee.

9:15pm Any other topic with the permission of the Chairperson

9:30pm Results of the Election.

9:45pm Annual Dinner.

Friends.! Please note that the society has already paid for the dinner for all its members in advance, Hence all are requested to attend this function. Members are also requested to bring their Guests (XYLs / Girl Friend / Boy Friend) The Guest shall be charged Rs.180/- per head. Dress code is formal.

Kindly confirm your participation with Minoo-4920898 / Sarla-5673390.

We sincerely hope that you will join us and make this event successful.

Thanking You,

For Mumbai Amateur Radio Society.

Nilesh Rathod, Secretary.

179. Cure for Kak Worm

From: Nirav Sanghavi
Topic: 179 Message: 179

Dear Ham,

this is a common problem with users of outlook express.
(It attaches itself as a signature to all the people you mail without
telling you. Every time you boot your comp it creates a fresh instance of
itself i.e. it 'reproduces'.)

Here's the cure.

please download this attachment and run it. it is a really small file.

You can also click on yes to immunise your pc against kak. This way you will
not get it in the first place.

186. MARS - Military Affiliate Radio System

Yahoo group: m_a_r_s
Date: 2001-05-05 12:03:51 UTC
From: Sandip Adiwarekar
Topic: 186 Message: 186

Hello Friends !!!

Here is some info on MARS,

Amateur Radio operators are invited to take part in the 51st celebration of Armed Forces Day by exchanging contacts with Army, Air Force, Navy-Marine Corps and Coast Guard radio stations.

Military-to-Amateur cross band operations will take place during 12-13 May 2001. Contacts will include operations in single sideband voice (SSB) and digital modes (RTTY, PACTOR, AMTOR, GTOR, and CLOVER).

Participating military stations from US, Europe and the Pacific will transmit on selected Military MARS frequencies and listen for amateur radio stations in the Amateur bands indicated below. The military station operator will announce the specific amateur band frequency being monitored. For Timings and frequencies for each station visit : http://www.arrl.org/news/stories/2001/05/01/2/afday-2001.html

For more info visit - http://www.asc.army.mil/MARS

==>DENNIS TITO PHONES HOME VIA HAM RADIO

Having the time of his life aboard the International Space Station, US
businessman Dennis Tito, KG6FZX, this week made his first Amateur Radio
contacts from his perch in space. Tito arrived aboard the ISS on April 30.

The first "space tourist," Tito spoke May 1 via Amateur Radio with his
family as the ISS was passing over Hawaii. The audio was telebridged to the
mainland. On May 2, Farrell Winder, W8ZCF, in Cincinnati, reported snagging
two contacts with the ISS--the second time chatting with Tito for several
minutes. Tito used the NA1SS call sign for the contact. He reportedly made a
few other contacts this week as well.

Winder said Tito told him he loves space and was having a ball. "He said it
is the greatest experience of his lifetime," Winder said. He also said Tito
was eager to know what was being discussed about him on Earth.

During Tito's visit, the crew of Russian Commander Yury Usachev, UA9AD, and
US astronauts Susan Helms, KC7NHZ, and Jim Voss, are undertaking a minimal
```

work routine and maintenance schedule. Winder says he also spoke with Helms during another pass.

In a TV interview from space earlier this week, Tito said he was not nervous at all about the launch. He reports suffering some space sickness early on but has begun to get used to weightlessness. "I'll tell you, there is nothing like this as an experience," Tito said. He said the ISS crew welcomed him and gave him a tour of the spacecraft.

Tito reportedly will pay Russia a total of some $20 million for the privilege of going into space. He and two Russian cosmonauts launched April 28 from Kazakhstan on a 10-day Soyuz vehicle taxi mission. NASA initially opposed Tito's visit, but Russia insisted. Last week, NASA relented and agreed to the arrangement under certain conditions.

Tito, 60, took and passed the Technician exam earlier this month after a volunteer examination session was set up for him in Russia.

==>7 MHZ "REALIGNMENT" AMONG WRC-2003 ADVISORY COMMITTEE PRELIMINARY VIEWS

The FCC's World Radiocommunication Conference 2003 Advisory Committee has approved several "preliminary views"--or PVs--on expected WRC-03 agenda items. Among these is a US preliminary view supporting a realigned 40-meter amateur allocation at 6900-7200 kHz on a worldwide primary basis. The FCC is soliciting public comment on all preliminary views by May 9.

The preliminary view was developed by Informal Working Group 6, which is dealing with most issues of concern to amateurs. ARRL Technical Relations Specialist Walt Ireland, WB7CSL, serves as vice chairman of IWG-6. The PV says that, alternatively, the US could support a 7000-7300 kHz worldwide primary amateur allocation.

Only amateurs in Region 2, which includes North and South America, have access to 7000-7300 kHz; the rest of the world has only 7000-7100 kHz, with the upper 200 kHz allocated for broadcasting. ARRL Technical Relations Manager Paul Rinaldo, W4RI, says the ARRL would prefer going back to the pre-World War II worldwide 7000-7300 kHz scheme. Some broadcasters, on the other hand, would like amateurs worldwide at 6800-7100 kHz, he said, so they would not have to move. A Radio Conference Subcommittee backgrounder from the Interdepartment Radio Advisory Committee--which reflects views of the federal government--said the issue "is liable to be very controversial."

Further complicating matters, Rinaldo said, is the fact that international HF broadcasters want to fold the 7 MHz realignment question into another WRC-03 agenda item examining the adequacy of HF broadcasting allocations from approximately 4 MHz to 10 MHz. Broadcasters are expected to seek additional HF elbow room to accommodate digital transmissions to complement their existing AM channels.

Any realignment scheme will involve having to move existing occupants--broadcasters on one side or fixed and mobile services, mostly government and Part 90 users, on the other.

"We want 300 kHz," Rinaldo said--reflecting the position of the International Amateur Radio Union, "but, we have some flexibility as to where it is."

Another PV with implications for amateurs would oppose the use of 420-470 MHz for use by the Earth Exploration-Satellite Service for so-called synthetic aperture radars, or SARs unless it can be shown that the satellites "do not cause harmful interference to amateur systems and stations." SARs are used to map regions on Earth's surface and are expected to be deployed primarily over tropical rain forest areas.

Rinaldo emphasized that the preliminary views do not represent formal US positions and are subject to change as preparations for WRC-03 move forward.

Comments on WAC preliminary views may be filed via e-mail to wrc03@fcc.gov. The FCC's WRC-03 Web site, http://www.fcc.gov/wrc-03, includes additional information as well as links to related documents.

WRC-03 is scheduled to begin June 9, 2003, and continue until July 4, 2003. The conference is expected to take place in Venezuela.

==>AO-40 TRANSPONDERS TO OPEN FOR EXPERIMENTAL OPERATION

The AO-40 team has announced plans to inaugurate experimental transponder operation on Saturday, May 5, at approximately 0800 UTC. The announcement came in the wake of successful initial transponder tests last weekend.

"We expect good conditions on Saturday morning over North and South America and Europe," said AMSAT-DL President Peter Guelzow, DB2OS, an AO-40 team leader. Guelzow said the 435 MHz and 1.2 GHz (L1-band) uplinks will be connected to the 2.4 GHz (S2-band) downlink passband.

It's estimated that AO-40 will be available on May 5 in the Western Hemisphere from 0800 until approximately 1400 UTC. Stations should use only SSB and CW. Guelzow said it's expected the transponders will remain available over a period of approximately 10 days.

"Needless to say, we're all very excited," he added.

The uplink frequencies are 435.550-435.800 MHz and 1269.250-1269.500 MHz. The Downlink passband is 2401.225-2401.475 MHz. The transponders are inverting, so a downward change in uplink frequency will result in an upward frequency shift in the downlink.

Users are asked to avoid the "middle" 2.4 GHz telemetry beacon and give it a clearance of 5 kHz on either side. "If the beacon cannot be copied because of interference from transponder users, the passband will be closed and the transponder shut down," Guelzow warned.

He emphasized that the operation is experimental, the schedule subject to change, and the transponders could be shut down at any time without warning.

AMSAT-NA President Robin Haighton, VE3FRH, last week raised the possibility that AO-40 could inaugurate transponder operation this summer, if tests and

orbital maneuvers between now and then go as planned.

AO-40 ground controllers also plan to test the problematic VHF and UHF transmitters again.

In other AO-40 news, AMSAT-DL reported the RUDAK experiment was powered up and made available to the RUDAK team for testing on May 1. The RUDAK--the German acronym stands for "Regenerative Transponder for Amateur Radio Communication"--is a digital transponder system that can be programmed to perform a variety of functions.

Jim White, WD0E, in Colorado reports reliable command results with the RUDAK-A processor on the L-band (1.2 GHz) uplink. This week White successfully loaded the primary housekeeping task on RUDAK-A, which is now sending telemetry and a pass-through of the IHU downlink. The RUDAK-B software has not been loaded yet, and White said that a lot of testing remains. He requested that hams not attempt to uplink to RUDAK until testing is completed, and it is made available for general operation.

==>TRIAL DATE SET IN DELIBERATE INTERFERENCE, UNLICENSED OPERATION CASE

Monday, May 7, has been set as the tentative trial date in Federal District Court in the case of William Flippo, arrested last summer for interfering with Amateur Radio operations and for transmitting without a license. The date could change, however. Flippo, of Jupiter, Florida, faces four counts of operating without a license and four counts of deliberate and malicious interference to a licensed service. He was taken into custody last July and is free on bond.

The criminal charges set for trial cover violations allegedly committed between June 1999 and April of last year. Each count carries a maximum penalty of one year in prison and a $10,000 fine.

Flippo, 58, already faces a $20,000 fine levied in 1999 for unlicensed operation, willful and malicious interference to Amateur Radio communications, and failure to let the FCC inspect his radio equipment. In January 2000, the FCC referred the matter to the US Attorney after Flippo failed to pay the fine, and the interference complaints continued.

During a search of Flippo's property after he was taken into custody, the FCC reportedly seized some three dozen items related to the alleged offenses, including radio equipment. Flippo was released on $100,000 bond. As a condition of his release, Flippo was prohibited from making any radio transmissions and from contacting any witnesses in the case. Neither he nor any of his family members may handle or possess firearms, and Flippo's travel was restricted to southern Florida.

Personnel from the FCC's Tampa District Office followed up on complaints from amateurs that Flippo--also known by his CB handle of "Rabbit Ears"--regularly interfered with amateur operations, especially on 10 and 2 meters.

FCC personnel visited the Jupiter area at least twice in 1999 as a result of amateur complaints alleging malicious interference. The FCC said it was able to track offending signals to Flippo's residence. At one point, an agent monitored and heard taped portions of a 2-meter ham radio net earlier that day being replayed on top of amateur communications on 10 meters, the FCC has said.

==>ALASKA GOVERNOR SIGNS ANTENNA BILL

Alaska Gov Tony Knowles has signed that state's Amateur Radio antenna bill into law. Alaska Senate Bill 78, An Act Relating to Municipal Regulation of Radio Antennas, was signed April 27. It will become effective July 26. Alaska becomes the 12th state to adopt such legislation.

The bill was approved by unanimous votes in the Alaska House of Representatives and Senate. The measure goes beyond incorporating language from the limited federal preemption known as PRB-1 into Alaska's state statutes. It includes a schedule of antenna structure heights, below which municipalities could not further regulate. It also contains a "grandfather" provision to protect existing towers should a municipality enact a restrictive antenna ordinance.

The new law will require localities in Alaska to "reasonably accommodate Amateur Radio antennas" and impose "only the minimum requirements" necessary, although they can require "reasonable and customary engineering practices" be followed.

The measure also will establish a three-tier minimum regulatory height schedule that depends on the population density of the community in which the antenna is installed and the size of the lot on which it is sited. Municipalities would not be permitted to further regulate antennas shorter than 75 feet in areas with a population density of more than 120 people per square mile. A minimum regulatory height of 140 feet would prevail in areas with a population density of more than 120 people per square mile for a lot size of an acre or larger. The top-tier 200 feet minimum regulatory limit would apply in areas where the population density is 120 people or less per square mile.

Alaska Section Manager Kent Petty, KL5T, said many of the state's hams deserve credit for helping to obtain passage of the important legislation. Petty said the letters, e-mails, and telephone calls and legislative testimony "really paid off" and suggested that Alaska amateurs write their representatives, senators and governor to thank them for their "unwavering and unanimous support."

A copy of the Alaska legislation is available as a PDF file on the Alaska legislature's Web site, http://www.legis.state.ak.us/PDF/22/Bills/SB0078B.pdf. More information on PRB-1 and Amateur Radio antenna regulation, is at http://www.arrl.org/FandES/field/regulations/#local .

==>ARRL FILES ADDITIONAL ULTRA-WIDEBAND COMMENTS

The ARRL once more has recommended that the FCC take a "reasonably conservative" approach in its plans to deploy ultra-wideband (UWB) devices on an unlicensed basis under its Part 15 rules. The ARRL's latest comments came in response to a late-March FCC request for comments on five reports addressing UWB's interference potential. The comments were filed April 25.

The reports were submitted by Qualcomm, Time Domain, the NTIA, and the Department of Transportation (two reports). Reply comments are due by May 10.

Citing the Qualcomm report, submitted March 5, the ARRL said "the broad nature of the interfering signal . . . indicates that any interference would extend to all VHF and UHF amateur bands." That particular report dealt with lab tests to assess the impact of UWB emissions on PCS phones using code division multiple access (CDMA).

The March 9 reports by Time Domain--a leading UWB proponent--and from the NTIA dealt with interference potential from UWB devices operating below 2 GHz to GPS receivers at the L1 and L2 (1.5 and 1.2 GHz) frequencies. "Considering the wide frequency range and roll-off characteristics assumed, it is probable that interference to L1 or L2 will also adversely affect amateur station receivers in the band 1240 to 1300 MHz," the ARRL said, reacting to the Time Domain study.

The League has arranged with the University of Southern California's UWB lab to test the interference potential of UWB devices to "typical Amateur Radio station configurations." Those test results, the ARRL told the FCC, are expected in the next few months.

The ARRL also took advantage of the latest comment round to reiterate its opinion that the FCC has failed to provide either a specific definition of UWB or key operating parameters and performance criteria. Neither has the FCC proposed any rules or parameters, the ARRL said.

The ARRL said the FCC must propose "specific definitional and operating rules" for UWB and solicit additional comments from interested parties before issuing a Report and Order in the proceeding.

In its initial comments filed last September, the ARRL advised the FCC to put its UWB proceeding on hold until more evidence was available on the technology's interference impact. More recently, the ARRL joined an industry coalition in calling on the FCC to issue a further Notice of Proposed Rule Making before it takes final action to authorize UWB equipment.

The League has said that its own review supports a conclusion that UWB has potentially beneficial applications that should be accommodated under the FCC's Part 15 rules "subject to appropriate interference avoidance regulations." Based on test results to date, the ARRL said, "the Commission should restrict UWB operation in existing crowded bands to operation above 6 GHz."

All of ARRL's comments in the UWB proceeding are available at http://www.arrl.org/announce/regulatory/et98-153/index.html.

==>SOLAR UPDATE

Solar maven Tad Cook, K7VVV, Seattle, Washington, reports: Sunspot activity and solar flux were both up, with average sunspot numbers for the week increasing by thirty points and average solar flux up by almost seven points. Solar flux peaked on Tuesday at 209.7.

Saturday was the most disturbed day, with planetary A index at 28, and the Fairbanks, Alaska, high-latitude College A index at 46. This was from an interplanetary shock wave produced by a flare on April 26. The energy from this flare was expected to arrive Sunday, but showed up a day earlier. The peak in solar flux, last week expected to be on the weekend, arrived two or three days later than expected.

Currently the solar disk is covered with sunspots, although they are small fairly non-complex regions, not like the recent sunspot 9393 which caused so much excitement over the previous two solar rotations. There is some possibility of flare activity from sunspot 9445.

The latest forecast shows solar flux declining over the next few days, 170 on Friday, 165 on Saturday, 160 on Sunday and 155 on Monday. Flux is expected to reach a short term minimum around 130 between May 13-15, then peak again from May 20-29. The next peak is expected to be lower than recent activity, and not reach a flux value of 200.

Geomagnetic indices should be unsettled to active this weekend, with a planetary A index of 15 on Friday and Saturday, 12 on Sunday and 10 on Monday.

Sunspot numbers for April 26 through May 2 were 193, 181, 173, 161, 178, 152 and 179 with a mean of 173.9. The 10.7-cm flux was 196.2, 190.8, 187.8, 191.7, 187.8, 209.7 and 176.2, with a mean of 191.5. Estimated planetary A indices were 7, 6, 28, 15, 5, 4 and 6 with a mean of 10.1.

==>IN BRIEF:

* This weekend on the radio: The North American HSMS Contest continues through May 9. The MARAC County Hunters Contest (CW), the Danish SSTV Contest, the IPA Contest (CW + SSB), the 10-10 International Spring Contest (CW), the 903 MHz and Up Spring Sprint, the Indiana, Connecticut and Massachusetts QSO parties and the ARI International DX Contest are the weekend of May 5-6. JUST AHEAD: The Nevada and Oregon QSO Parties, the VOLTA WW RTTY Contest 1200Z, the FISTS Spring Sprint, the CQ-M International DX Contest and the 50 MHz Spring Sprint are the weekend of May 12-13 See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Clarifications: AMSAT-NA President Robin Haighton, VE3FRH, said he erred concerning the location of a suspected hole in AO-40, mentioned in "AO-40 Transponder Operation Possible This Summer," The ARRL Letter, Vol 20, No 17 (Apr 27 2001). Haighton said he should have described the hole as being on "the bottom or Z axis" of the spacecraft. ### Commenting on the item

"Hosstraders has moved!" in the same edition, Ted Donnell, K1HD, said the original Hosstraders was held in Seabrook, New Hampshire, before it moved to Deerfield. The hamfest will be held in Hopkinton, New Hampshire, May 5-6.

* Spectrum Protection bill attracts additional cosponsors: ARRL Legislative and Public Affairs Manager Steve Mansfield, N1MZA, reports that the House and Senate versions of the Spectrum Protection Act are collecting cosponsors from both sides of the aisle. The House bill, HR 817, introduced by Rep Michael Bilirakis of Florida now has 18 cosponsors including Assistant Majority Whip Doc Hastings of Washington--part of the House Leadership. Other cosponsors include representatives John Baldacci of Maine, Tammy Baldwin of Wisconsin, Dan Burton of Indiana, John Conyers of Michigan, John Doolittle and Gary Miller of California, Virgil Goode of Virginia, Johnny Isakson of Georgia, William Jenkins of Tennessee, Walter Jones and Mike McIntyre of North Carolina, George Nethercutt of Washington, Ted Strickland and Patrick Tiberi of Ohio, Charles Stenholm of Texas, and Lee Terry of Nebraska. The Senate companion bill, S 549, introduced by Sen Michael Crapo of Idaho, currently has five cosponsors. These include senators Daniel Akaka of Hawaii, Susan Collins of Maine, Larry Craig of Idaho, Jesse Helms of North Carolina, and Bob Smith of New Hampshire.

* Wounded ham-sailor continues recovery: Sailboat skipper Bo Altheden, SM7XBH, shot and wounded after pirates attacked his vessel March 20 off Venezuela, continues his recovery in Trinidad. Following the incident, hams on the Maritime Mobile Service Net assisted Altheden and his wife, ViVi-Maj Miren, after Miren put out a call for help on 20 meters. Miren reports that Altheden had to be hospitalized for additional surgery after he developed an infection. The couple plans to fly to Copenhagen later this month. The couple and their 44-foot ketch Lorna were en route to Trinidad and Tobago when pirates--later described by Miren as six men in a fishing boat--pulled along side. Miren said the Lorna will be hauled out and stored in Trinidad for the next six months. "I hope Bo will recover during these months so we can come back and start sailing again," she told Eric Mackie, 9Z4CP, who was among the amateurs assisting in the rescue operation.--Eric Mackie, 9Z4CP

* Nevada antenna bill gets favorable committee vote: Nevada Assistant Section Manger Dick Flanagan, W6OLD, reports that the Nevada Senate Government Affairs Committee this week referred that state's pending Amateur Radio antenna legislation, Assembly Bill 61, to the full Senate with a "Do Pass" recommendation. The committee aired the bill April 30 in a public hearing. "Even though only three people showed up to voice their support of the bill, there was no one in opposition, and the committee members appeared open to our presentations," Flanagan said. The bill, sponsored by Assemblyman Bob Beers, WB7EHN, passed the Assembly last month on a 40-0-2 vote. Flanagan said all Nevada amateurs can record their opinions via the Legislature Message Center at http://www.leg.state.nv.us/71st/opinions/ or by telephone or fax. For updates and Senate contact information, visit the Carson Valley Radio Club Web site, http://www.cvrc.net/ab61/.

* AMSAT president to be available at Dayton: AMSAT-NA President Robin Haighton, VE3FRH, says he'll make time available for one-on-one visits with

AMSAT members during Dayton Hamvention. Haighton has set up specific times when he plans to be present at--or near--the AMSAT booth "to meet as many AMSAT members as I can and to hear your thoughts and ideas." Haighton says he'll be available Friday, May 18, 10-11:30 AM and 2-3PM; Saturday, May 19, 11 AM-noon and 2-3 PM; and Sunday, May 20, 10-11 AM. In addition, Haighton will be at the AMSAT dinner at the Amber Rose Restaurant Friday evening and will appear at the AMSAT Forum on Saturday, 8:30-10 AM. "AMSAT is always looking for volunteers, people like you, who would enjoy contributing to the hobby," Haighton said, "and if you feel that there is something within the AMSAT organization that you would enjoy doing, please let me know when we meet."--AMSAT News Service

* Kansas amateur named NOAA "Environmental Hero" for SKYWARN service: ARRL member Mike Albers, K0FJ, of Colby, Kansas, is the recipient of a 2001 Environmental Hero award from the National Oceanic and Atmospheric Administration. Albers was recognized for his outstanding service to the National Weather Service--a NOAA agency--as the volunteer director of the Thomas County SKYWARN network. NWS Meteorologist Scott Mentzer, N0QE, on April 26 presented a certificate and letter from Acting NOAA Administrator Scott Gudes to Albers during a special meeting of the Trojan Amateur Radio Club. Mentzer heads the National Weather Service office in Goodland, Kansas. NOAA Environmental Hero awards go to approximately 25 Americans each year in support of Earth Day. SKYWARN volunteers relay real-time severe weather data to National Weather Service via Amateur Radio. Mentzer said the SKYWARN network in Thomas County "has become a key source of weather data" for his office. As examples of SKYWARN's contribution, Mentzer cited the July 21, 1996, Colby tornado and a April 6, 2001, severe weather outbreak. More information about NOAA's Environmental Award is available at http://www.noaa.gov/earthday/heroes.htm .

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

MUMBAI AMATEUR RADIO SOCIETY

Dear Friends,

Mr. John R. Ackermann callsign [N8UR] from ohio U.S.A has arrived in Mumbai. He is currently the President of TAPR (Tucson Amateur Packet Radio, Inc., http://www.tapr.org), which is a large research-and-development oriented amateur radio group in the US.

Adolf Shepherd [VU2AF] has organised a lecture by Mr. Ackermann at Wilson College , Girgaum Chowpatty on Thursday, 10th May 2001 at 18:30 hours. All Hams are invited to attend this lecture.

All members interested in Digital Communications are requested to attend, I am sure we can learn a lot and improvise upon our communication skills.

looking forward to having an eyeball with you guys,

73s
NLF

191. Monthly Meeting

Dear Members,

The first Monthly General Meeting of members for the year 2001-2002 is scheduled for 12th May 2001 at 10.00am at Shishu Vihar School, Dadar.

Agenda for the meeting is :
1. QRM of imported chinese long range cordless phone.
2. Classes
3. Renewal of membership
4. Membership Drive
5. Field Trip in May
6. Any other point with the permission of the Chairman.

You are requested to attend the same and come out with your suggestions for the upcoming year regarding activities.

73s,
de VU2UGJ

==>AO-40 TRANSPONDER TESTS A HIT! 10-GHz TEST SET

The inaugural AO-40 transponder tests this past week have been a huge
success. Reports from amateurs making their first contacts on AO-40 have
come from all over.

"It was just great!" enthused AMSAT-NA President Robin Haighton, VE3FRH, who
worked a dozen or so stations via AO-40 last weekend. AMSAT has announced
plans to test the 10-GHz X-band downlink over the weekend. The solid state
X-band amplifier will be turned on and adjusted on May 13 at 0500 UTC, at MA
165. If that works, the 60-W traveling-wave tube amplifier will be fired up.
"Beacons will be used and probably the L1 uplink," said the AO-40 team's
```

Peter Guelzow, DB2OS. Guelzow said plans also call for connecting the C-band receiver to the X-band downlink.

AO-40 ground controllers opened up the next-generation satellite's transponders May 5 for general amateur use on an experimental basis. Stations can uplink on either 435 MHz or 1.2 GHz. The transponder downlink is at 2.4 GHz. The operation is experimental, the schedule subject to change, and the transponders could be shut down at any time without warning.

Mike Seguin, N1JEZ, in Vermont, says he successfully logged a dozen contacts in the first hour of operation, including two contacts using the Mode-L uplink. "I also logged my first DX contact with IZ8EDE." Seguin said his final first-day tally was 24 contacts.

Ed Krome, K9EK, in Indiana, echoed N1JEZ's comments. "Wow, AO-40 was terrific on this first morning of transponder operation, he said. "After almost 10 years, what a thrill!

Bruce Paige, KK5DO, in Texas also got lucky, racking up several DX contacts in Europe and later in Japan.

At this point, AO-40 may be available for use several hours a day, starting at orbital positions MA 136 and continuing through MA 240. During recent passes, the transponders have been available for six hours or so from a given point on Earth.

The tests have shown that uplink frequencies (without taking Doppler into account) are 435.495-435.780 MHz and 1269.211-1269.496 MHz, and the downlink passband is 2401.210-2401.495 MHz. The transponders are inverting, so a downward change in uplink frequency will result in an upward frequency shift in the downlink.

Users are being asked to avoid the "middle" telemetry beacon at 2401.323 MHz. For maximum QSO signal strength, stations should aim for a passband signal that's 10 dB below the beacon's. AO-40 has been operating without the benefit of the LEILA system, which can compensate for stations that are too strong in the uplink.

Haighton expressed appreciation for the "very hard work" of Project Leader Karl Meinzer, DJ4ZC, AMSAT-DL President Guelzow and the worldwide support group of command stations and technical advisors "for providing us with a great satellite."

Check the AMSAT-DL Web site for the latest information, http://www.amsat-dl.org/journal/adlj-p3d.htm .

==>ARRL AGAIN PETITIONS FCC FOR PRIMARY ALLOCATION AT 2300-2305 MHz

The ARRL has again asked the FCC to create a primary domestic Amateur Radio allocation at 2300-2305 MHz. Amateurs now are secondary there. The ARRL first asked the FCC in 1996 to upgrade the allocation there to primary, but the Commission never acted on the request.

"The segment 2300-2305 MHz is of extreme importance to the Amateur Service, especially for weak-signal communications and propagation research, including beacon operation, due to the low noise levels in that band," the ARRL said. The renewed petition was prompted by increasing demands on that portion of the spectrum due to development of new telecommunications technologies.

The Amateur Service has primary allocations in this part of the spectrum at 2390-2400 MHz and 2402-2417 MHz. The ARRL last year sought to have the segment 2400-2402 MHz elevated from secondary to primary, but the FCC has not acted on the request to date. The AO-40 satellite has been successfully using that band for downlink telemetry and transponder operation.

In light of the FCC's stated policy to protect incumbent amateur operation at 2300-2305 MHz, upgrading the amateur allocation there "would constitute the highest and best use of the band at present," the ARRL asserted in its latest filing. "It would also be consistent with the protection requirements for government and NASA operations immediately below 2300 MHz and the [M]WCS operation above 2305 MHz." Amateur Radio weak-signal work is centered near 2304 MHz.

The ARRL also requested the FCC not to introduce any other users to the band. The FCC has not yet put the ARRL's petition on public notice.

==>ARISS INTERNATIONAL TEAM MEETS

Members of the Amateur Radio on the International Space Station International Team met this month in the Netherlands to firm up plans to expand ham radio operation from space. The gathering offered an opportunity to involve all ARISS partners in future activities, not primarily the US and Russia.

Attending the sessions May 4-6 at the European Space Agency facilities in Noordvik were delegates from the US, Russia, Canada, Germany, Belgium, Italy, France, Japan, Great Britain, the Netherlands, Portugal and Poland. Those on hand included representatives from AMSAT and the International Amateur Radio Union. The partners reached accord--in some cases tentatively--on issues ranging from the scheduling of international ARISS school QSOs to future hardware plans and the final design of an ISS QSL card

"Up to now, we've mostly been working on projects by country," said Rosalie White, K1STO, who represented ARRL on the US delegation. "Now, we've realized that we need to learn to adapt together and to get things accomplished as an international group." Other American attendees included ARISS Administrative Committee Chairman Frank Bauer, KA3HDO, and Space Amateur Radio Experiment (SAREX) Working Group Chairman Roy Neal, K6DUE, who moderated the sessions.

ARISS Operations Committee Chairman Will Marchant, KC6ROL, updated the group on the status of school contacts to date. He also reviewed how the crew has been using the ARISS equipment on the ISS since the first crew came aboard in November.

The current "Phase 1" Amateur Radio facility aboard the ISS includes hand-held transceivers for 2 meters and 70 cm, although in its current location aboard the Functional Cargo Block, the station only has 2-meter capability. A packet setup also is aboard and working, but it still needs to be properly configured or replaced.

With a series of successful ARISS US and Canadian school contacts behind them, the ARISS partners have appointed an ARISS School Committee--with representatives from the US, Europe, Canada, Japan and Russia. "In the next few weeks, we'll be coming up with a plan to integrate the European schools," said White, who is among those on the panel. One issue is how to integrate school applications filed more recently with those from schools that have been waiting for several years to have a space contact.

Still outstanding are plans to complete fabrication of and install the four ARISS antennas on the ISS Service Module, the ultimate location of the Amateur Radio station. The antennas could be installed before the end of the year during a space walk, but several issues still need to be resolved.

The ARISS partners also reviewed applications for some Amateur Radio projects, including one for a slow-scan television setup. Another is a proposal from AMSAT-France to deploy a small "IDEFIX" satellite from the ISS, similar to the mini-Sputnik satellites launched from Mir.

The ARISS partners okayed a prototype design for a QSL card. It's expected to be finalized in a few weeks.

==>CALIFORNIAN TURNS IN TICKET; FCC STILL WANTS EXPLANATION

A California ham has turned in his Technician license in the wake of an FCC inquiry into his involvement in alleged rules violations on a Los Angeles-area repeater. But the FCC has told Gregory S. Cook, ex-KC6USO, of Chico that he must still address the allegations of broadcasting, playing music, and one-way phone patching before he'll be allowed to get another license.

FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth wrote Cook earlier this year, citing information that Cook had been party to the transmission of "a lengthy broadcast" in the late evening and early morning hours of February 1 and 2 over the W6NUT repeater in the Los Angeles area.

Hollingsworth also wrote Technician licensee Ted R. Sorensen III, KC6PQW, of Agoura Hills, citing information alleging that Sorenson had acted in concert with Cook, who was hooked in via phone patch while Sorenson facilitated the actual transmission. A similar transmission February 4-5 was said to have featured only Cook, again via phone patch to Sorenson's transmitter, Hollingsworth said.

Responding on March 10, Cook sent the FCC his ham ticket, which was due to expire May 7. Cook said he would agree to not renew his ticket and to stay off the air for a year if the FCC would consider the case closed.

Hollingsworth obliged him, but only to a point. In an April 18 letter, he said the FCC had accepted Cook's license for cancellation and that he could

reapply in a year. But before that, Hollingsworth said, Cook would have to "respond satisfactorily" to the allegations outlined in the FCC's February 21 letter.

In a separate reply, Sorenson told Hollingsworth that he intends to cooperate fully and adhere to FCC rules. He suggested that a "fair punishment" would be suspension from the W6NUT repeater for a year. Sorenson also offered to provide information on other rulebreakers on the W6NUT repeater.

On February 20, Hollingsworth initiated a separate inquiry with the repeater's trustee, Kathryn Tucker, AA6TK. Hollingsworth told Tucker that the FCC had received complaints that control operators and the repeater licensee "fail to address long periods of jamming by users, broadcasting, music playing as well as a plethora of other violations."

In a lengthy reply, Tucker, said the repeater's owners had not monitored the alleged February episodes involving Cook and Sorenson.

"The policy of the W6NUT repeater is not to attempt to remove unruly operators from its use," she told the FCC, adding that "an extensive educational campaign" has been conducted to inform users of proper operation.

Tucker said the W6NUT owners have received "numerous complaints" about the repeater's operation. "The policy is to let them 'go in one ear and out the other'," she told the FCC.

==>ANTENNA BILL INTRODUCED IN WISCONSIN

Wisconsin amateurs are making another attempt at getting an Amateur Radio antenna bill through that state's legislature. Assembly Bill 368 was introduced May 3 by Rep Joan Wade, with sponsorship from 11 of her Assembly colleagues and cosponsorship from four members of the Wisconsin Senate. Sen Fred Risser will shepherd the bill in the upper chamber.

The bill will attempt to incorporate language from PRB-1--the FCC's doctrine of limited preemption of authority over Amateur Radio antenna structures--into Wisconsin state law.

Wisconsin Section Manager Don Michalski, W9IXG, credited ARRL Public Information Coordinator Jim Romelfanger, K9ZZ, and ARRL State Government Liaison Jim Lackore, AD9X, for spearheading the effort within the amateur community.

If approved, AB 368 would require that ordinances or resolutions affecting the placement, screening or height of Amateur Radio antennas or support structures have a "reasonable and clearly defined aesthetic, public health or safety objective." Such an ordinance or resolution also must represent "the minimum practical regulation" necessary to accomplish the locality's objectives and must reasonably accommodate Amateur Radio communication.

The measure has been referred to the Committee on Urban and Local Affairs, and a hearing is set for May 15.

A copy of the proposed legislation is available on the Wisconsin Legislature Web site, http://www.legis.state.wi.us/2001/data/AB-368.pdf. More information is available on the Badger State Smoke Signals Web site, http://www.bsss.org.

A dozen states have incorporated PRB-1 language into their statutes. Bills also are pending in Nevada and New York.

==>RECOLLECTIONS, PHOTOS, ANECDOTES SOUGHT FOR COLVINS BOOK

A book now in the works will highlight the adventures of the late husband-and-wife DXpedition team of Lloyd and Iris Colvin, W6KG and W6QL. Author Jim Cain, K1TN, is seeking the assistance of radio amateurs and others around the world to share reminiscences, anecdotes, photos and other relevant information for possible inclusion.

Commissioned by the Yasme Foundation, the soon-to-be-published book will include a history of the Foundation and a biography of the Colvins. Anyone with information to share may contact Jim Cain at yasmebook@....

Iris Colvin died in 1998, and Lloyd Colvin died in 1993. Between the 1960s and the early 1990s, the Colvins took ham radio to some 200 countries--including nearly every member-nation of the United Nations. They racked up more than a million contacts over the years and amassed one of the largest QSL collections in the world--more than a half million cards at last count.

Yasme Foundation President Wayne Mills, N7NG, said the Foundation was extremely pleased to have retained Cain, a former ARRL Headquarters staff member and a ham since 1961, to research and write the Colvins' and the Yasme Foundation's story.

The Yasme Foundation is a not-for-profit corporation organized to conduct scientific and educational projects related to Amateur Radio, including DXing and the introduction and promotion of Amateur Radio in underdeveloped countries. Visit the Yasme site at http://www.yasme.org.

==>ALINCO SHIFTS NORTH AMERICAN DISTRIBUTION, SERVICE TO OHIO FIRM

Amateur Radio manufacturer Alinco has closed its US branch in Torrance, California, and shifted its North American distribution to an Ohio firm. Alinco product distribution and customer service now are being handled by Atoc Amateur Distributing LLC in Covington, Ohio. The change was effective May 1.

A news release posted on the Alinco Web site says that Alinco will continue to be "a very committed, viable player in the Amateur Radio marketplace" and that all Alinco warranties "will remain in force and continue to be honored through their term." Alinco will exhibit at Dayton Hamvention next week and will sponsor the W8BI special event station in the outdoor exhibits area as it has in past years.

In addition to dealer distribution, the Atoc facility in Ohio is taking over customer support and out-of-warranty service of Alinco products and sales of Alinco parts. Parts sales have been temporarily suspended during the changeover, and service could be disrupted for a time as well.

The announcement said Alinco will concentrate on designing and manufacturing products from its Japan headquarters in Osaka and factory in Toyama.

For more information, visit the Alinco Web site, http://www.alinco.com , or contact Atoc Distributing LLC, 23 S High St, Covington, OH 45318; 937-473-2840.

==>SOLAR UPDATE

Solar seer Tad Cook, K7VVV, Seattle, Washington, reports: As sunspots fade from view, solar flux and sunspot numbers are down. Average sunspot numbers for the week declined by nearly 45 points, and average solar flux was off by more than 40 points.

The A and K indices went high this week, indicating a minor geomagnetic storm on May 9 and 10. This began on May 8 when the earth entered a high speed solar wind stream. The interplanetary magnetic field, which is another name for the sun's enormous magnetic field, turned south on May 9. This rendered Earth's magnetosphere vulnerable to gusts of solar wind.

Active geomagnetic conditions are fading, and should become unsettled on May 11 and 12, with planetary A indices of 15 and 12, dropping to around 10 on May 13 and 14. Contesters should see fairly good conditions for the CQ-M Contest this weekend. Solar flux is expected to stay near 135 for the next few days, then rise above 150 after May 17 and above 175 after May 19.

Currently we are moving from spring toward summer propagation conditions. Ten meters is not as viable as it was in late March, and as longer daylight hours in the northern hemisphere heat the ionosphere, the ionosphere thins and the MUF is lower during daylight hours. 15 meters can still be quite good, especially into areas that are dark, and as the days become longer, night time openings on 20 meters will become more common.

Sunspot numbers for May 3 through 9 were 157, 186, 151, 120, 103, 88 and 98 with a mean of 129. The 10.7 cm flux was 172.3, 175.6, 160.6, 155, 138.3, 128.7 and 129.4, with a mean of 151.4. Estimated planetary A indices were 7, 9, 5, 7, 17, 14 and 32 with a mean of 13.

==>IN BRIEF:

* This weekend on the radio: The Armed Forces Day Communications Test (see below), the Nevada and Oregon QSO Parties, the Volta WW RTTY Contest, the FISTS Spring Sprint, the CQ-M International DX Contest and the 50 MHz Spring Sprint are the weekend of May 12-13. JUST AHEAD: The Manchester Mineira CW Contest and the Baltic Contest are the weekend of May 19-20. The CQ WW WPX Contest (CW) is the weekend of May 26-27. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and

http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Armed Forces Day Communications Test reminder: To avoid conflict with the Dayton Hamvention, the Army, Air Force, Navy, Marine Corps, and Coast Guard are co-sponsoring the annual Amateur Radio communications tests in celebration of Armed Forces Day the weekend of May 12-13. The annual celebration features the traditional military-to-amateur crossband communications test and message-receiving test. Full information is on the ARRL Web site, http://www.arrl.org/news/stories/2001/05/01/2/afday-2001.html .

* NY governor enrolled as ARRL member; antenna bill reassigned: ARRL Hudson Division Director Frank Fallon, says the Assembly version of New York's Amateur Radio antenna bill, A 1565, has been reported out of the Local Government Committee and now is in the Ways and Means Committee. The Senate version, S 2893, remains in the Senate Local Government Committee. Fallon says bill proponents have been encouraging club members around the Empire State to write letters in support of the measures. Fallon said he's "very optimistic" about the bill's chances this year. If approved by both chambers, the bill would go to Gov George Pataki, a former amateur (K2ZCZ) for his signature. In an effort to get Gov Pataki back into ham radio, Fallon said, the governor has been presented with a two-year ARRL associate membership with the inscription, "We want to get you back into Amateur Radio. We hope that you will do for ham radio in the 21st century what Barry Goldwater did in the last century." Fallon said he's hoping to get the governor enrolled in a ham radio class and to have him visit a Field Day site next month. "It sure would be great to see a Yagi flying over the Capitol Building," he said. The Hudson Division Web page http://www.arrlhudson.org has a copy of the bill and additional information.

* ISS astronaut to visit alma mater: ISS Expedition One Crew Commander William "Shep" Shepherd, KD5GSL, will visit his alma mater, Arcadia High School, in Phoenix, Arizona, on May 15. Students at Arcadia spoke with Shepherd via ham radio on March 7 when he was still aboard the ISS. The contact was arranged as part of the Amateur Radio on the International Space Station (ARISS) program. This time, in answer to an invitation from students, he will address the entire school about his own life and times at Arcadia. He'll also share his ISS experiences and visit the Arcadia Amateur Radio Club, KD7LAC. Arcadia High School senior and club president Ross Tucker, AC7JO, spearheaded the effort to make the Arcadia ARISS contact a reality. During his visit to the school Shepherd will take part in a ham radio special event, taking calls from students and youth Amateur Radio clubs in Arizona, California, Oregon, Washington, Utah, New Mexico and Texas. School clubs can listen in at 28.500 MHz. For more information about ARISS, visit the ARISS Web site, http://ariss.gsfc.nasa.gov/. For more information on Shepherd's Arcadia visit, contact Ross Tucker, AC7JO, e-mail bomc@....

* May 12-13 is National Foxhunting Weekend: ARRL Amateur Radio Direction Finding Coordinator Joe Moell, K0OV, says CQ magazine is sponsoring National Foxhunting Weekend, May 12-13. Foxhunters from around the country will

choose their own favorite RDF adventure. For basic information about the sport of foxhunting, suitable equipment for mobile and on-foot hunting and a form for reporting the results of your NFW efforts, visit Moell's ARDF Web site, http://www.homingin.com .

* Kid's Day is June 16: Kid's Day is just around the corner. On June 16, 1800 to 2400 UTC, kids of all ages are invited to experience ham radio. Amateurs are encouraged to invite youngsters into their shack to enjoy the fun. Kid's Day began in 1994 with a one-hour program created by the Boring Amateur Radio Club in Boring, Oregon. The youngsters exchanged names and their favorite color. Forty kids participated. Last year, more than 1000 took part in the event, now sponsored by ARRL. All participants can download a personalized certificate. There's no limit on operating time. The suggested exchange is name, age, location and favorite color. You are encouraged to work the same station again if an operator has changed. Call "CQ Kid's Day." Kid's Day rules, frequencies and other information are on the ARRL Web site, http://www.arrl.org/FandES/ead/kd-rules.html and in the June issue of QST, p 48.

* National Hurricane Center's W4EHW announces on-the-air test event: The National Hurricane Center in Miami will sponsor the W4EHW Hurricane Season 2001 On-The-Air Test Event Saturday, June 2, 1300-2200 UTC. W4EHW will be on-the-air on HF, VHF and UHF, including 7.268, 14.325, 21.325, and 28.525 MHz on HF, and on VHF and UHF repeaters and 146.52 MHz simplex FM in the Miami area. Stations should report call sign, signal report, location, and brief weather report (eg, sunny, rain, cloudy, etc). QSL via W4VBQ and include a self-addressed stamped envelope.--Julio Ripoll, WD4JR

* QSL card postage to jump a penny: It will cost another penny to mail a QSL card (sans envelope) after July 1. The US Postal Service has announced that it's raising the postcard rate by $0.01. First-class domestic postage in the US increased to 34 cents on January 7. The complete rate schedule is available on the USPS Web site, http://www.usps.com/.

* SETI League gives Bruno Memorial Award to DJ0BI: The SETI League has named Peter Wright, DJ0BI, as the winner of its 2001 Giordano Bruno Award, the organization's highest honor. Wright was cited for his efforts to promote the search for extraterrestrial intelligence and amateur radio astronomy in Europe. He is the seventh recipient of the award. A native of Scotland, Wright is a former member of the US-based Society for Amateur Radio Astronomy. He founded a similar organization in Germany--the European Radio Astronomy Club. The SETI League promotes a privatized search for extraterrestrial intelligence. Many of its members are hams, and the executive director is Paul Shuch, N6TX. For more information, visit the SETI League Web site, http://www.setileague.org .

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; http://www.arrl.org. Jim Haynie, W5JBP, President

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb at http://www.arrl.org for the latest news, updated as it happens. The ARRLWeb Extra at http://www.arrl.org/members-only/extra offers ARRL members access to informative features and columns.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

198. Chinese Phone's QRM

Yahoo group: m_a_r_s
Date: 2001-05-14 14:47:48 UTC
From: Huzefa
Topic: 198 Message: 198

Dear Friends,

This is to the continuation to the discussion we had at the Monthly Meeting on 13-05-2001 regarding the Chinese Phone QRM created,Various issues were discussed as how to stop the QRM and the difficulty faced in stopping them.

The issue's were if we were to follow the Person having the chinese person what would happen,
1. some caution that since the phone was costing Rs.5000-7000 it was only afforded by the unscrupulous elements therefore it is not advisable to follow them ,rather we all should take the matter to wpc by giving the address of the same.
2.What if we were to give the address of the person using the phone to the WPC
and wait for the action, no matter they react or do not react even after the spoon feeding them of everything
3.Wait for sometime since the chinese phone are not reliable and it may not work after a period of time and therefore people will stop buying it.
4. There was a suggestion that atleast two hams should visit the person and explain them the legal standing regarding the phones and make them known that we can all receive them,ofcourse we should carry our equipments i.e handy and a minature copy of the license which will pretend to look as we are from the Department and that would make them scary,keeping in mind that we should push them till they get scare and should not take the matter far,if they get message clear our job is done else we shall let matter pursue with the wpc .
5.Finally it was decide to note down the address of the chinese phone locations from the members if they had seen any,Few locations were noted down.

Well today I went to one of the location alone to note the exact address with all my gear(Handy,Copy of license)as discussed in point 4 ,to advice and caution them regarding the chinese phone.
I was expecting a hostile attitude from them but the moment i entered the premises with the handset they were
shocked when i mentioned about the phone,they reliased that something is wrong .The owner was so tensed that
he stammered and said" Hamne to kab ka phone hata chuke hein yeh to sirf wire laga hain" .
I asked him to remove the antenna also to that
he said "Bhaiya woh hum aaj hi nikal dege,
i said "tum ko abhi nikaal na hoga,warna agli baar Badi Gadi aake sub kuch seize kar legi"
he was very tensed and he summoned some one to remove but could not locate the person and he rquested me that it would be definetly removed.
I even found out if he knew anyone and he gave me 2 other locations out of which i visited 1 location,since it was a residence and no male were present .I only caution them, at first they denied then i proved them,they got scared and said "Ghar Mein koi nahin hain, Hum is nikaal deinge".

From the above what I Conclude and like to clarify that
1.It is not that the phone are owned by unscrupulous elements but by anyone ,it is only a

assumption made that if, a person who speak loudly and use some filthy language does not mean he is some bhai(If this is the case
then i do come in the category as i have already shown u my skills at skyline).we need to tackle them as and
when they come accordingly,If a person is strong nut to crack what i suggest is to leave him and decide what is to be done.

2.If the WPC are pressurised in a way that we have given u the address ,now react, they will and have to definetly act on a complain,we can even go the extent of sending the copy of the address to wpc Delhi and tell
them the inaction of WPC mumbai.

3. if we were to wait for the chinese phone to die his own death as discussed yesterday then tommorrow some
else could buy the vhf handy and start using it on our band,as they know that we are incapable to do anything

4. I tried the 4th sugesstion given above, in my way and it worked

I suggest that the society should request WPC Mumbai to depute us, as we have requested them and Mr.
Nagarle has asked to find the address and he will do the needful, to trace the chinese phone by issuing the letter to that effect.This will make things easier & smoother,if we were suppose to go and trace the phones and if there is any legal issues we can rely on the letter issued by the WPC .

Suggestion and Reactions are welcome to what I have stated above

Huzefa

4. There was a suggestion that atleast two hams should visit the person and explain them the legal standing regarding the phones and make them known that we can all receive them,ofcourse we should carry our equipments i.e handy and a minature copy of the license which will pretend to look as we are from the Department and that would make them scary,keeping in mind that we should push them till they get scare and should not take the matter far,if they get message clear our job is done else we shall let matter pursue with the wpc .
5.Finally it was decide to note down the address of the chinese phone locations from the members if they had seen any,Few locations were noted down.

Well today I went to one of the location alone to note the exact address with all my gear(Handy,Copy of license)as discussed in point 4 ,to advice and caution them regarding the chinese phone.
I was expecting a hostile attitude from them but the moment i entered the premises with the handset they were
shocked when i mentioned about the phone,they reliased that something is wrong .The owner was so tensed that
he stammered and said" Hamne to kab ka phone hata chuke hein yeh to sirf wire laga hain" .
I asked him to remove the antenna also to that
he said "Bhaiya woh hum aaj hi nikal dege,

i said "tum ko abhi nikaal na hoga,warna agli baar Badi Gadi aake sub kuch seize kar legi" he was very tensed and he summoned some one to remove but could not locate the person and he rquested me that it would be definetly removed.
I even found out if he knew anyone and he gave me 2 other locations out of which i visited 1 location,since it was a residence and no male were present .I only caution them, at first they denied then i proved them,they got scared and said "Ghar Mein koi nahin hain, Hum is nikaal deinge".

From the above what I Conclude and like to clarify that
1.It is not that the phone are owned by unscrupulous elements but by anyone ,it is only a assumption made that if, a person who speak loudly and use some filthy language does not mean he is some bhai(If this is the case
then i do come in the category as i have already shown u my skills at skyline).we need to tackle them as and
when they come accordingly,If a person is strong nut to crack what i suggest is to leave him and decide what is to be done.

2.If the WPC are pressurised in a way that we have given u the address ,now react, they will and have to definetly act on a complain,we can even go the extent of sending the copy of the address to wpc Delhi and tell
them the inaction of WPC mumbai.

3. if we were to wait for the chinese phone to die his own death as discussed yesterday then tommorrow some
else could buy the vhf handy and start using it on our band,as they know that we are incapable to do anything

4. I tried the 4th sugesstion given above, in my way and it worked

I suggest that the society should request WPC Mumbai to depute us, as we have requested them and Mr.
Nagarle has asked to find the address and he will do the needful, to trace the chinese phone by issuing the letter to that effect.This will make things easier & smoother,if we were suppose to go and trace the phones and if there is any legal issues we can rely on the letter issued by the WPC .

Suggestion and Reactions are welcome to what I have stated above

Huzefa

From: P.V.Jaiprakash
Topic: 198 Message: 201

Dear HIT

Good work done for chinese phone QRM.

We all are facing the same problem. At my location I have located an antenna which was at a chawl area and I visited inside the area but it was so packed from the top that I could not locate antenna from inside of the area. I asked at the surrounding houses but no body could answer me. So I decided to tape their conversation on my tape recorder so that when I get this exact location I could keep it handy. It was a full 59+ signal and they are in some tpt/repair business. Hope I may locate the station shortly.

I think when we are on the move we should always hunt for these type of antenna and note down the locations so that at a later date we can follow-up.

If all members can watch out for such antennas in their location and forward the same to the club can help all to free our frequency from Chinese Phone QRM.

Best Regards

VU2JPN, Jaiprakash.

Dear Members

Thanks for The Annual Membership Fees for the year 2001-2002 and for Life Membership Fees.

All receipts for the payment received will be posted to respective members with a weeks time.

Thanks once again for all the co-operation and expect active participation in all our club activities.

73's

Jaiprakash.

hey huzefa! amazing bit of work! and the results are heartening too! wish
i could've seen the faces of those people you visited!

Your suggestion that WPC Mumbai should depute us makes sense.

cheers!
Madhu

Vol. 20, No. 20
May 18, 2001
***************

IN THIS EDITION:

* +ARRL Executive Committee ponders 5 MHz band petition
* +ARRL, REACT ink cooperative agreement
* +LEILA sounds her siren call
* +League files ultra-wideband reply comments
* +ARRL out in force at Dayton Hamvention
* IN BRIEF:
This weekend on the radio
+ARRL welcomes K2QAI to the lab staff
Emergency Communications Course Registration is still open
+EIMAC co-founder Jack A. McCullough, ex-W6CHE, SK
Cap and badge man Dale Marquis, WA4EZU, SK
Electric bike-mobile nets DX for New Jersey ham
Field Day satellite update
"Wireless Giant of the Pacific" on the air again

+Available on ARRL Audio News

============================================================
NOTE: To accommodate Dayton Hamvention travel schedules, The ARRL Letter and
ARRL Audio News for Friday, May 18, are being distributed Wednesday, May 16.
The Solar Update will be available Friday on the ARRL Web site and via W1AW.
See you in Dayton!--Rick Lindquist
============================================================

==>ARRL EXECUTIVE COMMITTEE REVIEWS PRELIMINARY 5 MHz BAND PETITION

The ARRL Executive Committee has reviewed a preliminary draft Petition for
Rule Making seeking a new US ham band in the vicinity of 5 MHz. Experimental
operation at 5 MHz under a license issued to the ARRL has been going on
since 1999. Participants in the ARRL WA2XSY experimental operation have
established that an allocation at 5 MHz could improve emergency
communication capabilities by filling the gap between 80 and 40 meters.

On a motion from Southwestern Division Director Fried Heyn, WA6WZO, the EC
agreed that the petition should seek a domestic secondary amateur allocation
around 5 MHz with a bandwidth of 150 kHz. Executive Committee members will
review the completed draft petition before it's filed with the FCC, possibly
before the next ARRL Board meeting in July.
```

An amateur allocation in the vicinity of 5 MHz long has been an objective of the International Amateur Radio Union. The IARU's Administrative Council has approved a goal of "a narrow allocation, even on a shared basis in the vicinity of 5 MHz." Winning an allocation at 5 MHz--even on a domestic basis--could take several years. Securing an international allocation will be more difficult and take even longer. Consideration of an allocation at 5 MHz is not on the agenda for WRC-03 nor on the preliminary agenda for WRC-05/06.

A review of FCC-related issues dominated the May 5 Executive Committee session in Dallas. In other matters, the Executive Committee was told that an FCC Notice of Proposed Rule Making still is expected soon in response to the ARRL's petition, RM-9404, seeking Amateur Radio access to the low-frequency spectrum. Filed in late 1998, the ARRL petition asks the FCC to establish LF allocations in the vicinity of 136 kHz and between 160 and 190 kHz.

ARRL General Counsel Chris Imlay, W3KD, also told the Committee that the ARRL's Application for Review that seeks to clarify the FCC's PRB-1 limited preemption policy with respect to amateur antennas is pending before the full Commission. The ARRL wants the full Commission to review--and reverse--an FCC staff decision declining to extend PRB-1 coverage to include CC&Rs--covenants, conditions and restrictions. The EC agreed to request an en banc presentation to the full FCC this fall, after new Commission appointees have been seated.

The Committee also was told that favorable FCC action is anticipated on a petition seeking to upgrade Amateur Radio's status from secondary to primary at 2400 to 2402 MHz. The ARRL recently renewed a longstanding request that the FCC elevate Amateur Radio from secondary to primary at 2300 to 2305 MHz. The minutes of the ARRL Executive Committee meeting in Dallas are available on the ARRL Web site, http://www.arrl.org/announce/ec_minutes_466.html.

==>ARRL AND REACT TO SIGN MEMORANDUM OF UNDERSTANDING

Representatives of the ARRL and REACT met in Dallas, Texas, May 16 to sign a memorandum of understanding between the two organizations. The agreement is intended to promote joint coordination of the resources between ARRL and REACT and to facilitate the flow of information to and from the public during emergencies.

ARRL president Jim Haynie, W5JBP, and REACT International president Chuck Thompson, N5IAG, signed on behalf of their respective organizations.

"This memorandum of understanding is part of our efforts to establish a common front in dealing with emergencies and disaster communication and with other issues facing the radio hobby, including such things as antenna ordinances," Haynie said. Thompson said the memorandum will strengthen the organizations' "common goal of providing assistance to the public."

While REACT has been associated primarily with Citizens Band in the past, the organization has widened its focus to embrace amateur and other services. ARRL and REACT share common goals in terms of emergency

communication. The primary mission of REACT is "to provide public safety communications to individuals, organizations, and government agencies to save lives, prevent injuries, and give assistance wherever and whenever needed."

The memorandum of understanding calls on the two organizations to "cooperate and utilize their resources from time to time to optimum mutual benefit to both parties." Among specific principles, the agreement will involve cooperation during emergencies and disaster relief and the elimination of "duplicative or technically inferior service" during such responses. "The parties will generally encourage ongoing liaison with each other and urge members of both organizations to develop increasingly effective communications and cooperation," the agreement states.

Thompson and Haynie are long-time friends, and Haynie is a member of REACT in the Dallas area. Haynie was the instructor for Thompson's Novice Amateur Radio license class. He says Thompson recruited him to REACT membership.

A copy of the REACT-ARRL Memorandum of Understanding is available on the ARRL Web site at http://www.arrl.org/FandES/field/mou/react.html.

==>AO-40'S LEILA SOUNDS HER SIREN CALL

If you're planning to use the AO-40 satellite, watch out for LEILA! The satellite's ground controllers have turned on the LEILA system, which not too subtly discourages operators from putting too strong a signal into the satellite's uplink receiver.

AMSAT-DL President Peter Guelzow, DB2OS, says LEILA was turned on for the first time May 12 after some very strong signals--louder than the middle beacon--showed up in the satellite's passband.

"Several people tried to get them to reduce power, but they apparently weren't listening," he said in a posting on the AMSAT-DL site. The situation soon led to "massive grumbling" on the passband, he said.

LEILA soon was set up on the UHF uplink and "it worked like a charm!" Guelzow concluded. If a too-strong station fails to lower power, LEILA notches out the offender's uplink and sends the siren signal to the downlink for about five seconds.

Bruce Paige, KK5DO, who's AMSAT's new awards manager, was on hand for LEILA's debut. He says LEILA can notch out five signals at a time. "So if there are a lot of offenders, you might have to wait to get stomped by LEILA," he said.

Guelzow said if all goes well, ground controllers probably will leave LEILA switched on continuously.

The success of LEILA was dimmed by the apparent failure of ground controllers to get the AO-40 X band (10 GHz) system to operate. Ground controllers haven't given up yet, however. Guelzow said Stacey Mills, W4SM, and Michael Fletcher, OH2AUE, tested the X-band transmitters, both solid

state and traveling wave tube (TWT) over the weekend. "Unfortunately, the test was not successful," Guelzow said. Telemetry indicated the proper commands, but apparently no power was reaching any of the X-band modules. Another test will be run soon.

AO-40 ground controllers opened up the next-generation satellite's transponders May 5 for general amateur use on an experimental basis. Uplink frequencies (without taking Doppler into account) are 435.495-435.780 MHz and 1269.211-1269.496 MHz, and the downlink passband is 2401.210-2401.495 MHz. The transponders are inverting, so a downward change in uplink frequency will result in an upward frequency shift in the downlink.--thanks to AMSAT News Service and AMSAT-DL

==>ARRL ULTRA-WIDEBAND REPLY COMMENTS TARGET INTERFERENCE POTENTIAL

The ARRL says it's not reasonable to assume that the FCC's Part 15 rules can be applied to ultra-wideband (UWB) devices due to their unique transmission characteristics. The League drew that conclusion in responding to comments filed by others in reaction to five reports that address UWB's interference potential.

The FCC has proposed to deploy UWB devices on an unlicensed basis under its Part 15 rules. Last month, it requested comments on five reports. The ARRL commented on the reports April 25 and submitted its reply comments May 10.

The ARRL said tests conducted to date "reveal a significant potential for harmful interference to at least some licensed services, including GPS and the Amateur Service." In addition, the ARRL said, additional "more specific and targeted tests" must be conducted before the FCC can adopt appropriate rules for UWB devices.

The League called again on the FCC to take no action in the UWB proceeding, ET Docket 98-153, until it establishes specific rules, definitions and classes of UWB devices in a further Notice of Proposed Rule Making.

Remarking on comments filed by UWB proponent Time Domain Corporation, the ARRL said it would be reasonable to conclude that if UWB devices bother GPS receivers, "there is at least the same degree of interference potential to amateur receivers."

The ARRL also commented on remarks filed by XtremeSpectrum Inc, which proposed a spectrum mask to offer 18 dB of protection below Section 15.209 levels. The ARRL said specifying a spectrum mask for UWB is "an absolute necessity," and it called XtremeSpectrum's proposals "a step in the right direction."

In past comments in the UWB proceeding, the League has agreed that UWB has potentially beneficial applications, but it says these should only be accommodated under the FCC's Part 15 rules "subject to appropriate interference avoidance regulations."

ARRL's comments in the UWB proceeding are available at http://www.arrl.org/announce/regulatory/et98-153/index.html.

==>ARRL AT DAYTON: FORUMS, DEMONSTRATIONS AND DXCC CARD CHECKING

ARRL will offer two forums, a demonstration of its popular TravelPlus repeater-locating software--and DXCC card checking this year at Dayton Hamvention. In addition, a wide array of ARRL memberships, publications and products will be on sale, and there will be a table of freebies too. The 50th Dayton Hamvention takes place Friday through Sunday, May 18-20 in Dayton's Hara Arena.

Hamvention offers an opportunity to get acquainted with ARRL President Jim Haynie, W5JBP, and other volunteers and notables in the ARRL family. At the ARRL Forum, Saturday, 8:30-9:45 AM, Room 3, President Haynie will share the podium with ARRL Executive Vice President David Sumner, K1ZZ, Great Lakes Division Director George Race, WB8BGY, and others.

"I look forward to telling people how things are going at the ARRL and that League membership is on the rise," Haynie said. "We always enjoy Dayton Hamvention!"

During the ARRL Forum, members are encouraged to share their ideas and concerns. The forum also provides a chance to hear about League's latest activities on behalf of its members.

The ARRL Public Relations Forum is set for Sunday, 11 AM-noon, in Room 1. A panel of public relations volunteers will share their success stories on getting positive publicity for Amateur Radio in their areas. The moderator will be ARRL Public Relations Committee Chair Diane Ortiz, K2DO. Ortiz and ARRL Public Relations Manager Jennifer Hagy, N1TDY, organized this year's forum.

All visitors to the ARRL booth in North Hall of the indoor exhibits area can pick up a free Dayton Hamvention 50th show commemorative button. The ARRL booth will feature product demonstrations, DXCC card checking and, of course, sale of ARRL publications and products.

A variety of free ARRL materials--from operating aids to award applications and other forms--also will be available across the aisle from the retail sales area. Headquarters staff members will be on hand to answer questions, too.

The ARRL booth is also the place to catch up with ARRL Headquarters staff members who are attending this year's show as well as the various field organization volunteers who turn out to lend a hand. President Haynie and others plan to be available to chat as schedules permit.

ARRL headquarters staff and volunteers will participate in various Hamvention forums and programs. Here's a sampling:

* ARRL President Haynie share his vision of "The ARRL from 2001-2026" during the Ham Radio Town Meeting, Saturday, 2-4 PM, in Room 3, sponsored by Amateur Radio Newsline.

* ARRL technical editor and antenna guru Dean Straw, N6BV, will explain "What's New in the Latest Edition of The ARRL Antenna Book" during the

Antenna Technology Forum, Friday, 2:15-5 PM, in Room 1.

* ARRL Certification and Continuing Education Program Coordinator Dan Miller, K3UFG, will take part in the ARES Forum, Friday, 2-2:45 PM, in Room 4.

* QST Editor Steve Ford, WB8IMY, will moderate a PSK31 forum, Saturday, 2:15-3:45 PM, in Room 1. Ford also will sit on a panel at the RTTY Forum Saturday, 11:45 AM-12:45 PM in Room 3. ARRL Hudson Division Director Frank Fallon, N2FF, will moderate the RTTY Forum for the second year.

* ARRL Lab Supervisor Ed Hare, W1RFI, will recount "The Incredible Saga of the Tuna Tin 2," Friday, 10-11:30 AM, in Room 2 and describe an "RF Exposure Model" during the RF Safety Forum, Saturday, 12:45-1:45 PM, in Room 4. (Hare also will visit the off-site "Four Days in May" QRP gathering.)

* ARRL Field and Regulatory Correspondent Brennan Price, N4QX, will visit the National Frequency Coordinators' Council forum, Friday, May 18, 1-1:45 PM, in Room 4. Moderating that event will be Dick Isely, W9GIG, who also is ARRL Central Division Director

See you in Dayton!

==>IN BRIEF:

* This weekend on the radio: The Manchester Mineira CW Contest and the Baltic Contest are the weekend of May 19-20. JUST AHEAD: The CQ WW WPX Contest (CW) is the weekend of May 26-27. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* ARRL welcomes K2QAI to the lab staff: John Phillips, K2QAI, of Winsted, Connecticut, has joined the ARRL Laboratory staff as a radio frequency interference/electromagnetic interference engineer. An ARRL member and a native of Brooklyn, New York, Phillips graduated from Hofstra University with a degree in electrical engineering. He has worked in a number of RFI/EMI related positions, mainly in the military electronics field, prior to starting his own computer software and consulting business. Phillips holds an Extra class license and spends most of his ham radio time working CW--40 meters being his favorite band. Phillips' primary work will be assisting members with solutions to RFI problems and improving ARRL's RFI/EMI information capabilities. Contact John Phillips at k2qai@....

* Emergency Communications Course Registration is still open: May registration for the Level I Amateur Radio Emergency Communications Course EC-001 opened at 4 PM EDT Monday, May 14. Each on-line class is limited to 50 students. There are still seats available but don't wait too long. The registration form can be found at https://www.arrl.org/forms/cce/ . The Certification and Continuing Education Program has a new home page http://www.ARRL.org/cce and a revised FAQ page http://www.ARRL.org/cce/faq.html .

* EIMAC co-founder Jack A. McCullough, ex-W6CHE, SK: The co-founder of tube manufacturer EIMAC, Jack A. McCullough, ex-W6CHE, of Cupertino, California, died April 28. He was 93. An ARRL Life Member, McCullough and Bill Eitel, W6UF (SK), paired up to start Eitel-McCullough--EIMAC--in the 1930s after building a tube for use as a grounded-grid amplifier. A DXer and contester in his younger years, McCullough also was a QST author in the 1930s and 1940s, writing mostly about what he knew best--high-power amplifier tubes.--thanks to Richard Tryce, W6WVP

* Cap and badge man Dale Marquis, WA4EZU, SK: Hamfest cap and badge vendor Dyrell "Dale" Marquis, WA4EZU, of Fairforest, South Carolina, died May 14 following an illness and hospitalization. He was 68. An ARRL member, Marquis ran Marquis Engraving and frequently marketed his wares--caps and badges bearing call signs or other legends--at Amateur Radio conventions and gatherings throughout the Eastern US. Survivors include his wife, Elizabeth, a son and three daughters. Condolences are welcome Elizabeth Marquis, PO Box 652, Fairforest, SC 29336.--thanks to Ben Marquis

* Electric bike-mobile nets DX for New Jersey ham: Operating bicycle mobile in New Jersey, ARRL member Vincent Diak, WB2PDW, made his first SSB DX contact, working G2BKZ on 20 meters. Diak's station, a Yaesu FT-817 running 5 W to an Outbacker Perth antenna, was installed on his Lafree electric bike (http://www.Lafree.com). The bicycle has a battery-driven motor to assist the rider on grades and a computer that determines when you need help. Signals were Q5 in both directions. Diak said he supplemented the Yaesu's internal battery with a "water bottle" battery--a battery pack made to fit into the water-bottle holder on the bike's frame. For a closer look at bicycle mobiling, see the Bicycle Mobile Hams of America Web site, http://www.lafetra.com/bmha/ .

* Field Day satellite update: The QST column "Amateur Satellites and Field Day 2001" (June QST, p 99) was not completely up-to-date concerning two amateur satellites. ARRL Technical Specialist Kevin Manzer, AC5DK, notes that the Russian RS-13 satellite was shut down in January, and RS-12 has been reactivated in Mode A, although Manzer notes that, most years, it is usually in Mode K or KA when late June rolls around. In Mode A, RS-12 uplinks at 145.910 to 145.950 MHz and downlinks from 29.410 to 29.450 MHz, CW/SSB. The beacon is at 29.408 MHz. The latest information on RS-12 and RS-13 can be found on the AC5DK RS-12/13 Satellite Operators page, http://www.qsl.net/ac5dk/rs1213/rs1213.html.--Kevin Manzer, AC5DK

* "Wireless Giant of the Pacific" on the air again: Former RCA coast station KPH, Point Reyes, California, will attempt to contact the Liberty ship SS Jeremiah O'Brien, KXCH, on Sunday, May 20, between 1730 and 2200 UTC. Initial contact on 500 kHz will shift to 426 kHz for KPH, and 425 kHz for KXCH. KPH may also transmit on 6477.5 kHz. KPH will broadcast commemorative messages and possibly a traffic list. The former KPH facilities are part of the Point Reyes National Seashore, which has a strong interest in the important role the station played in the history of radio communications. The Marine Radio Historical Society Web site http://www.radiomarine.org has more information.--Dick Dillman, W6AWO

Dear Team,

1st thank you HIT keep it up.

Can we fr MARS come out with a press realease informing press to carry out a news / article on this. I do know there is a service from Press club which by payment of 200 / 300 rupees deliver our press release to all the press offices in Mumbai. We have to give the no of copies they tell.

Also we should think of this release in 4 languages so the translators dont mess up. Engilish, Marathi, Gujarati and Hindi.

What do you think???

Topic: 211 Message: 211

dear Friends,

First it was Huzefa , now it is Jaiprakash, Huzefa visited the locations having chinese phones and got a couple of them down. This showed that it is not a lost cause.

Now Jaiprakash got one chinese phone down within 15 minutes of his visit.

Morale of the story, We can definetely reduce the QRM , if not totally eliminate it. But we have to work for it. Sitting in your shacks is not going help. I hope that the actions of our heroes will motivate more members to visit their nearby chinese loction and [TRY] to bring them down.

In the last monthly meeting some members were convienced that by the above mentioned action we are inviting trouble from the underworld. Well JPN & HIT can verify that the users are ordinary people like us and has no connections with the underworld whatsoever.

In the meeting it was finally decided that we will only survey the locations and collect the information above the person using the chinese phone (and not interact with them) then we should write a letter to the monitering station with the available info and ask them to take action. Many members were to survey and give me the details by last saturday.

I regret to inform you all that till today I have not received a single name and address from any of our members who promised in the above meeting. This very clearly proves that we have (vu4gas, vu5gas, vu6gas, vu7gas, vu8gas and so on) in our society.

Many people agree that we must use the media, but no one is doing so, I now therefore one again request all our members to take some interest and put in a very little time , even if you put in 1 hour in a month for our hobby , we can have about 50 man hours available to us all members club together.

Anyway my heartly congralatutions to HIT & JPN for doing a great job, keep it up guys.!!

212. early birds net to be revived.

Yahoo group: m_a_r_s
Date: 2001-05-21 06:43:14 UTC
From: vu2nlf
Topic: 212 Message: 212

dear members,

The early bird net was discontinued by me under protest because of the Chinese phone QRM and our members were convinced it is a lost cause and we should lay down and simply give away our VHF Frequencies.

I have always pleaded to all our members to fight back but I guess most of us are scared chickens or just lazy and simply don't care. Now HIT & JPN have brought us new hope that we can fight back and keep our VHF frequencies.

Looking at the above situation we shall start the Early Birds Net from tomorrow Tuesday 22nd May 2001 at 07:00 hours IST on 145.100 Mhz (because we are still facing some QRM on 145.200 Mhz). All members are requested to check in the net and increase the activity on 2 meters.

I have also requested our members in past and now I do it once again to participate and make the net more interesting by giving information such as Weather Report for the day, Joke for the day, Thought for the day, riddle for the day and so on. otherwise it is pointless to check in and out of the net.

I hope many of you will volunteer to chip in.

73s catch up with you guys on the net..!!!

dear members,

We have scheduled a Simulated Disaster Communication Exercise on 9th & 10th June 2001. (Saturday & Sunday)

This is not a picnic or a field day. This is going to be a very challenging exercise demanding physical and techical fitness. All members who think they are tough enough to take up the challenge may get in touch with me at the earliest.

This exercise will train you to work and perform against all odds. It will bring in confidence in you and give you a peace of mind and prepare you for real Disaster.

Join us and take up the challenge...!!!

Dear Friends:

Thanks for the wishes and also for the encourgement from VU2HIT for removing of 1st Chinese phone.

At my location I have SILENCED 2 QRM's:

1. Chawl no.5 on Vidyavihar-Kurla road
"N" ward, near nala, Chembur, mumbai.
Down on 19/5/2001

2. Room no.15 behind Suma Palace beer bar
Amar Mahal, Chembur, Mumbai.
Down on 22/5/2001 just before coming to
this cyber cafe.

The above people were just common people.

I trust all the users may be common people only and I am sure no underworld people will use these type of equipments because they are more consious of their secrecy.

In case we find any hard nuts we can use our team power to encounter them.

I have now 3 more locations to handle. Hope to tackle them too. If not I will surely call for 2nd round visit with team power.

I sure all members should be on the look out for these type of antennas now.

We have to shoot down all the antenna in Mumbai as early as possible.

==>DAYTON HAMVENTION HOSTS BUOYANT CROWD

Rain on the opening day of the 50th Dayton Hamvention did not deter the
crowd from having a good time. Show-priced bargains offered by some dealers
enhanced the enjoyment, and the weather improved immensely on Saturday and
Sunday.

General Chairman Jim Graver, KB8PSO, said Hamvention officials believe that
between 27,000 and 28,000 turned out for this year's show--nearly the same
number as last year. Graver said he was happy to see a good crowd despite
higher gasoline prices and Friday's rain.

Unlike past Hamventions, major manufacturers had comparatively little new to
offer this year. Among the most noticeable items were: The new Kenwood
TH-F6A compact triband hand-held FM VHF transceiver with wideband receive
including HF; Ten-Tec's long-awaited 6 and 2-meter all-mode transceiver, the
Model 526 "6N2"--the Tennessee company's first factory-built VHF radio;
Yaesu's MD-200 desk mike "for elite-class Amateur Radio operators;" and
Alpha Power's Alpha 6/2 maximum legal power VHF amplifier--the first amp
```

produced under the company's new management and ownership.

ARRL Advertising Manager John Bee, N1GNV, said he got "almost universally positive comments" from Dayton Hamvention 2001 exhibitors. "'They came to buy,' was a common refrain," he said. Bee called the number of new vendors at this year's show "an encouraging sign" for Amateur Radio.

During the ARRL Forum Saturday, Executive Vice President David Sumner, K1ZZ, said, "It's been great year for Amateur Radio and the ARRL. Things are moving in the right direction on a number of fronts." ARRL President Jim Haynie, W5JBP, echoed Sumner's sentiments. Pointing to his career in sales, Haynie said Amateur Radio is "the best product that I have in my repertoire of things to sell." Haynie called upon those on hand to think about "the product" that is Amateur Radio and how they can share the fun with others.

"I'm asking you to talk to your neighbor, I'm asking you to talk to your brother, your sister, your city council, your mayor, your congressman, and tell 'em about your product, which is Amateur Radio," Haynie exhorted.

Haynie presented a plaque to Graver in recognition of the 50th Hamvention. Speaking on behalf of the Dayton Amateur Radio Association and the Hamvention Committee, Graver thanked the League for its efforts on behalf of Amateur Radio.

Saturday morning's AMSAT forum included a telephone visit with "space tourist" Dennis Tito, KG6FZX. Tito told the gathering that Amateur Radio provided a great boost to his recent visit to the International Space Station. "The opportunity to do a phone patch five days in a row was a very important part of my flight, and I looked forward to it every day," he said. A planned ham radio contact with the ISS crew from the Hamvention did not work out, however. In addition to handling the Tito interview, Roy Neal, K6DUE, of the Amateur Radio on the International Space Station program, also chatted with astronaut Janice Voss, KC5BTK.

The FCC's Riley Hollingsworth, K4ZDH, not only was one of the Saturday banquet speakers but the highlight of the Sunday morning FCC forum. Playing to a packed house, Hollingsworth and FCC colleague Bill Cross, W3TN, of the Wireless Telecommunications Bureau, reviewed regulatory and enforcement issues confronting ham radio (see below, "FCC to Amateurs: Detailed Regulation "Not in the Picture.")

Hollingsworth told the crowd that amateur enforcement complaints are way down. With tongue only somewhat in cheek, Hollingsworth said "California" topped his list of enforcement issues that keep him awake at night. "If it weren't for California, amateur enforcement would be a one-day-a-week job," he said, "and we wouldn't need most of the rules."

Hollingsworth also cited "stupidity" and unlicensed 10-meter operation as other factors that continue to provide grist for enforcement. He played taped excerpts of contentious on-air amateur discussions to demonstrate his point. "There was nothing illegal--nothing against our rules" on the tapes, he said. But, he continued, their content presents a poor image of the

Amateur Service to anyone listening in--and that could include the media, decision makers and the general public.

Graver said there are no current plans for Hamvention to move from the venerable Hara Arena. Dayton Hamvention's contract to use Hara runs through 2003.

==>FCC TO AMATEURS: DETAILED REGULATION "NOT IN THE PICTURE"

The FCC says the ball is in the court of the Amateur Service to determine the course of future Amateur Radio regulation. Speaking May 20 at the Dayton Hamvention FCC forum, Bill Cross, W3TN, of the FCC's Wireless Telecommunications Bureau, said that the days of Commission-imposed regulation are past.

"Detailed regulation of the nitty gritty of communication services, including the Amateur Service, is not in the picture," Cross said. "Rather, the FCC is shifting to strong and effective enforcement of truly necessary regulations." The FCC, he said, now plans to look to the amateur community to reach consensus on any new regulations it thinks it wants and needs.

"I hope that those of you who are thinking about asking us to carve up a band by fiat will think again," he told the packed forum. "You really are asking us to tie your hands regarding your use of your spectrum."

Before the FCC initiates any rulemaking proceedings in the Amateur Service to change privileges, Cross said it wants to see proposals involving the implementation of "new and more modern communications technologies," such as digital. In addition, he said, any future proposal "must include all licensees, and it must include all bands," and--most important--the amateur community must reach a consensus on the topic.

Cross said the FCC does not want and cannot handle "multiple proceedings that address piecemeal changes in operating privileges" that affect only certain classes of licensees or certain bands. "You, collectively, need to reach agreement on how you want to use your spectrum," he reiterated.

Cross said he expected the issue of restructuring operator privileges to come up "in a couple of years" at the outside. "Changes in operating privileges for the different classes of operator licenses are inevitable," he said.

==>ASTRONAUT THRILLS MISSOURI, WASHINGTON STUDENTS VIA AMATEUR RADIO

While he doesn't yet hold a ham ticket, astronaut Jim Voss has been making a lot of friends on Earth via the Amateur Radio on the International Space Station (ARISS) program. Voss on May 23 completed an on-air conversation with youngsters at the Moran Prairie Elementary School in Spokane, Washington. The previous week, Voss chatted with students at Parkway Central High School in Chesterfield, Missouri.

Youngsters at the Washington school asked questions ranging from bone density to exercising in space, radiation and solar flares.

"I think your brain does work a little bit differently up here," Voss said in response to a question from one Moran Prairie youngster. On the ISS, Voss said, "you're floating around, and your mind is having to do a lot of things that aren't natural to interpret the way you see things upside down." He said the crew members "have to be a little bit more careful up here."

Voss told the pupils that he enjoys space walks and was looking forward to an excursion outside the ISS in a couple of weeks could prove more challenging than usual. Voss said he even enjoys microgravity in his free time. "Sometimes I do things with the zero gravity, floating around and doing flips and somersaults--it's like playing in space."

Voss told students at both schools that the astronauts are enjoying "quite a variety" of foods on the space station's menu. He also said he misses his family but told the Missouri students that he felt "lucky and blessed" to be aboard the ISS and that he enjoyed the inspiring view. "The earth is quite a gorgeous place, and we can't take pictures that are good enough to make it look as good as it really is," he told the Parkway Central students May 17.

The high schoolers also wanted to know about such issues as sleeping in space, what the crew does if someone gets sick, and what it takes to become an astronaut and ISS crew member. Both contacts were made directly, via 2 meters, and Voss used the NA1SS call sign for the QSOs.

Voss, astronaut Susan Helms, KC7NHZ, and Russian crew commander Yuri Usachev, RW3FU, are approximately halfway through their Expedition Two tour of duty aboard the ISS. They will return to Earth in July.

==>KACHINA EXITS THE AMATEUR RADIO, HF MARKET

Kachina--which made a big splash at the 1997 Dayton Hamvention when it introduced its then-revolutionary 505DSP PC-controlled Amateur Radio transceiver--has quit the ham radio market. The Arizona manufacturer discontinued production and marketing of the 505DSP, its only ham product, and all other HF radio products and accessories, effective May 24.

Kachina Vice President Cameron Earnshaw blamed "the slowdown in Amateur Radio in general, and HF radio in particular" for the company's decision to exit the HF market. "Any radio selling for over $1000 is a pretty hard sell these days," he said. The Kachina 505DSP, the first amateur transceiver designed solely for control via a personal computer, has retailed in the vicinity of $2000.

"Unfortunately, the 505DSP was too expensive to produce," he told ARRL. "For that we have only ourselves to blame. Performance costs money, but you really limit your sales when you cross that $1000-$1200 mark."

Earnshaw said he does not know how the Japanese manufacturers continue to produce and market top-end Amateur Radio gear. He suggested they must be doing so "out of a labor of love, supporting the losses from other more-profitable ventures."

Earnshaw said Kachina will continue to provide service and spare parts for all Kachina HF radio products for the foreseeable future and will honor all

factory warranties through their duration. Amateur Radio products remaining in Kachina's inventory were being discounted through Kachina's Web site, http://kachina-az.com.

Kachina Chief Engineer Doug Smith, KF6DX, said he's sad to see the product line come to an end. "Some might say that this is another blow to Amateur Radio, but I would say it is just an indicator of the need to adapt to changing conditions," he said. "The Amateur Radio Service should see several exciting developments in the coming years, including digital voice, high-speed digital modes, remote control and further improvements in so-called software-defined radios, to name a few."

Smith says he'll be moving on "to greener pastures," but will continue to edit QEX/Communications Quarterly for the ARRL.

==>NEVADA GOVERNOR SIGNS AMATEUR ANTENNA BILL

Nevada Gov Kenny Guinn has signed that state's Amateur Radio antenna legislation--Assembly Bill 61. The law goes into effect October 1.

"I would like to commend everyone who assisted on this effort," said Nevada Assemblyman Bob Beers, WB7EHN, the bill's author and sponsor. "The grass roots support for this bill was key to its passage and enactment, and the subject of awed comments in both houses." The measure cleared the state Senate on a unanimous vote and went to the Governor this week for his signature.

The measure will incorporate the wording of the limited federal preemption known as PRB-1 into the Nevada Revised Statutes. Introduced by Beers in February, AB 61 will require municipal ordinances to "reasonably accommodate amateur service communications" and "constitute the minimum level of regulation practicable to carry out the legitimate purpose of the governing body." The bill would not apply to historic or architectural preservation districts.

As originally worded, the legislation also would have applied to future deed covenants, conditions and restrictions imposed by homeowners' associations. That language was stripped from the bill in committee, but the rest of the measure survived intact.

Nevada Assistant ARRL Section Manager Dick Flanagan, W6OLD, expressed his gratitude to the state's amateur community for the bill's success. "We have achieved passage of AB61 only through your efforts!" he said.

Nevada is the 13th state to incorporate PRB-1 language into its statutes. "I can't imagine a more natural state to acquire the Number 13 distinction than Nevada--a state world renowned for beating the odds!" Flanagan said. Amateur Radio antenna bills also were approved this year in Alaska and Idaho, and similar measures are pending in New York and Wisconsin.

Updated information on the Nevada PRB-1 legislation is available at the Carson Valley Radio Club Web site, http://www.cvrc.net/ab61/. The full text of AB 61 is available on the Nevada State Web site,

http://www.leg.state.nv.us/71st/bills/AB/AB61.html .

==>KENTUCKY AMATEUR DIES INSTALLING ANTENNA

A Kentucky Amateur Radio Emergency Service member died May 20 while installing a 2-meter antenna he'd just bought at the Dayton Hamvention. According to ARRL Kentucky Section Emergency Coordinator Ron Dodson, KA4MAP, Ronald L. Oller, KG4JVT, of Irvington, died when the groundplane antenna he was installing fell onto the overhead electrical service line to his house. He had been a ham for about eight months.

Dodson said Oller and a teenaged friend, John Betner, KG4LHQ, had purchased new 2-meter groundplanes at the Hamvention. The pair already had installed one of the units at Betner's home and were in the process of raising Oller's antenna when the incident occurred. Betner was not injured and summoned help for his friend.

Dodson said Oller had a history of heart trouble but said he did not know if that was a factor in his death.

Dodson described Oller as "one of the most enthusiastic hams I have ever met" and as "a generous individual who loved to be helpful in spite of his heart ailment." Earlier in the weekend, Oller had traveled to Dayton Hamvention on a chartered bus with other amateurs from Kentucky's Meade, Breckinridge, Jefferson and surrounding counties.

Oller got his license last October and became involved in public service and, as AAT4YQ/T, in the Military Affiliate Radio System. He also had "elmered" the 16-year-old Betner when he studied for his license.

"It can happen to any of us at any time," said Dodson, who advised caution when installing antennas. "It's too late to help Ron, but, please, let's not lose anyone else to such a terrible tragedy."

A memorial service for Ron Oller was set for May 27.

==>TWO ARRL SECTIONS TO GET NEW SECTION MANAGERS

New section managers will take office July 1 in the Maryland-DC and Northern New Jersey ARRL sections. Incumbent section managers were re-elected in six other sections.

The only contested race was in Rhode Island, where incumbent SM Armand E. Lambert, K1FLD, held off a challenge from Ellis H. Maris Jr, W3PDK, 180 to 123. Votes were counted this week at ARRL Headquarters.

In Maryland-DC, Tom Abernethy, W3TOM, will succeed Bill Howard, WB3V, who decided not to run for another term. An Advanced licensee from Accokeek, Maryland, Abernethy, 49, has field appointments as an Emergency Coordinator, Official Emergency Station, Official Bulletin Station and Official Relay Station.

In Northern New Jersey, William Hudzik, W2UDT, of Gillette, will succeed Jeffrey Friedman, K3JF, who did not seek another term. Hudzik, 54, holds an Extra Class ticket. He serves as a volunteer examiner and also volunteers in the QSL bureau.

Incumbent section managers reelected without opposition were Jan Welsh, NK7N, Nevada; Al Shuman, N1FIK, New Hampshire; Donald W. Costello, W7WN, San Joaquin Valley; Mel Parkes, AC7CP, Utah; and Clay Emert, K5TRW, West Texas.

All terms are for two years.

==>VIRGINIA SM POSITION DECLARED VACANT; NEW SM NAMED

The ARRL Executive Committee declared the office of Virginia Section Manager vacant on May 16. Carl A. Clements, W4CAC, of Portsmouth was appointed to fill the declared vacancy. Clements will fill out the term of Lynn Gahagan, AF4CD, of Chesapeake, who had been SM since April 1998.

"After lengthy deliberation and careful consideration, the ARRL Executive Committee has decided that it is in the best interests of the membership to declare the office of Virginia Section Manager vacant, effective immediately," a brief statement from the Executive Committee said. "A new Section Manager, Carl A. Clements, W4CAC, of Portsmouth, has been appointed to fill the vacancy for the remainder of the current term of office, through March 31, 2002. These actions have been taken in accordance with the rules and regulations of the ARRL Field Organization."

Gahagan was notified of the action last week by ARRL Executive Vice President David Sumner, K1ZZ, who thanked Gahagan for his service to ARRL. No details of what led the Executive Committee to declare the Virginia Section Manager's position vacant were released.

According to the minutes of the May 5 EC meeting in Dallas, Texas, ARRL First Vice President Joel Harrison, W5ZN, met with Gahagan in February to "review concerns that had been brought to the attention of the Executive Committee." Subsequently, at the direction of the EC, Sumner wrote Gahagan setting out "five points that had to be addressed and resolved with regard to the administration of the ARRL emergency communications program in the Section." The Executive Committee discussed Gahagan's reply at its meeting and agreed to resolve the matter last week.

EC members met May 14 in a teleconference to determine the final disposition of the matter. Minutes of that session and the May 5 meeting are available on the ARRL Web site.

==>SOLAR UPDATE

Propagation prognosticator Tad Cook, K7VVV, Seattle, Washington, reports: SEATTLE, WA, May 25, 2001--Geomagnetic conditions were quieter this week, and solar flux and sunspot numbers were a little higher. Average solar flux was up nearly ten points, and average sunspot numbers were up by about seven points.

Solar flux is expected to peak over the next week. Solar flux for Friday is predicted at 165, and then 170 for Saturday through Tuesday. Predicted planetary A index for Friday through Monday is 8, 10, 20 and 12. Earth is currently inside a solar wind stream flowing from a coronal hole.

Sunspot numbers for May 10 through 16 were 94, 96, 127, 119, 149, 146 and 125, with a mean of 122.3. The 10.7 cm flux was 130.4, 136.6, 138.1, 138.9, 138.2, 142.1 and 137.8, with a mean of 137.4. Estimated planetary A indices were 28, 9, 34, 23, 12, 16 and 12 with a mean of 19.1.

Sunspot numbers for May 17 through 23 were 137, 109, 92, 99, 118, 159 and 192 with a mean of 129.4. The 10.7 cm flux was 147.4, 138.2, 141.3, 141.5, 150.1, 152 and 158.7, with a mean of 147. Estimated planetary A indices were 9, 11, 12, 10, 8, 9 and 11 with a mean of 10.

==>IN BRIEF:

* This weekend on the radio: The CQ WW WPX Contest (CW), the Anatolian RTTY WW Contest, the Memorial Day CW Sprint and the ARCI Hoot Owl Sprint are the weekend of May 26-28. JUST AHEAD: The Major Six Club Contest is June 1-4; the QRP TAC Contest (CW), the WW South America CW Contest and the IARU Region 1 Field Day (CW) are the weekend of June 2-3. The ARRL June VHF QSO Party, the ANARTS WW RTTY Contest, the Portugal Day Contest, the Asia-Pacific Sprint (SSB), and the TOEC WW Grid Contest (SSB) are the weekend of June 9-11. Kid's Day is June 16-17. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* McGan Award nomination deadline extended: The ARRL Public Relations Committee has voted to extend the McGan Award nomination deadline. All nomination materials now must be received at ARRL Headquarters in Newington, Connecticut, by 5 PM Eastern Time on June 1, 2001. The ninth annual Philip J. McGan Memorial Silver Antenna Award will go to an Amateur Radio operator who has demonstrated outstanding volunteer public relations success on behalf of Amateur Radio. For more information on the award program, see QST, February 2000 (page 48). For a nomination form and official rules, visit the ARRL Web site Public Relations Department page, http://www.arrl.org/pio . Submit all McGan nominations and supporting documents to Philip J. McGan Memorial Silver Antenna Award, c/o Jennifer Hagy, N1TDY, ARRL, 225 Main St, Newington, CT 06111.

* Canada makes 5 WPM official: Canadian Basic operators with 5 WPM credit now have full HF Amateur Radio privileges. Effective May 19, Industry Canada has amended the Technical Requirements set out in the Radiocommunication Information Circular 2, "Standards for the Operation of Radio Stations in the Amateur Radio Service." The IC grants full operating privileges in all Amateur Radio frequency bands below 30 MHz to operators holding the Basic plus 5 WPM Morse code qualification. Copies of the revised RIC-2 are available from the Industry Canada Web site, http://strategis.gc.ca/SSG/sf01226e.html .--RAC

* FCC reiterates license renewal and modification basics: The FCC took advantage of the Dayton Hamvention FCC forum to remind Amateur Service licensees that license renewal and modification now is done via the Universal Licensing System--or ULS. The ULS is accessible via the FCC ULS Web site, http://www.fcc.gov/wtb/uls. Bill Cross, W3TN, of the FCC's Wireless Telecommunications Bureau noted that Amateur Radio licenses may not be renewed any sooner than 90 days prior to license expiration. When only changing an address, he said, licensees should choose the "Administrative Update" (AU) option. When renewing only, he said, choose "Renewal Only" (RO). To change an address while renewing your license within the 90-day window, select the "Renewal/Modification" option. An application requesting renewal that's outside the 90-day window will be dismissed, Cross said. Modifications no longer automatically result in a new ten-year license term. Call sign changes are not made unless requested by the licensee. Cross said amateur applicants needing assistance or who believe they have made an error on an application they've filed should contact the ULS help desk, ulshelp@....

* WRTC-2002 seeks donations: Donations are now being sought for the World Radiosport Team Championship 2002. Under the leadership of Organizing Committee Chairman Jouko Häyrynen, OH1RX, the Contest Club Finland and the Finnish Amateur Radio League have agreed to jointly host WRTC 2002 from July 9 through July 16, 2002. The on-the-air operating portion of the event will be held in conjunction with the 2002 IARU HF World Championship on July 14 and 15. Appointed as US representatives are Dennis Motschenbacher, K7BV, USA West; Bob Allphin, K4UEE, USA South and Jeff, Briggs, K1ZM, USA East. The Northern California DX Foundation has agreed to assist in processing US donations. Donations by credit card or by check (made out to "NCDXF [for WRTC Project]") are tax-deductible to the extent permitted by law for US taxpayers. Send cash, check and VISA/MC/AMEX donations from the US to NCDXF, c/o Rusty Epps, W6OAT, 651 Handley Trail, Redwood City, CA 94062. (w6oat@...). Donations from outside the United States can be sent directly to a WRTC 2002 bank account. See the WRTC 2002 Web site, http://www.wrtc2002.org/support.htm for specific information. For event information, visit the WRTC 2002 Web site, http://www.wrtc2002.org.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

dear members,

we are pleased to inform you that we have succesfully worked Digital mode
on HF. The transmission was on 14,330 MHz from NLF's QTH received by UGJ in Andheri. RTTY mode (Chatting) , ASCII file transfer and SSTV (JPG & BMP file transfer) was sucessful.

Now we have Digital capablities and can definately work from field and especially during disasters.

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

The Disaster Communication Exercise is scheduled on 9th & 10th June 2001
(Sat & Sun). In order to apply for the mobile licences to delhi we require list of all the participents . All members participating in the exercise are requested to confirm with me at the earliest.

Becoming a Ham - Part 1
By T. A. Benham, W3DD

My First Crystal Radio

I was born on December 30, 1914, and became blind two years later. In 1922 I was at the Western Pennsylvania School for the Blind in Pittsburgh. There was at least one educational enterprise in which I was engaged during that spring. In 1920, the world's first commercial radio station came on the air in Pittsburgh: KDKA. Somewhere, I had heard about making a radio receiver using a crystal substance, an antenna and an earphone. I learned later that the crystal substance was galena. I had heard it would be necessary to put the crystal in a small metal cup, get a fine piece of wire and connect it through an earphone to a water pipe. The surface of the crystal would be connected through a fine wire to an antenna. The antenna should be as long as possible, outdoors and as high as convenient. The crystal would rest in the small cup with its top surface available for touching the fine wire to it. My friend Tony and I went to a room located off the basement hall (a place where he once left me to find my way back to the recreation area alone). We stretched a piece of wire from the window out to a tree about 25 feet from the building. After much fiddling with all parts, we finally heard, very faintly at first, radio station KDKA. We found after some more experimenting that there was a most sensitive spot on the surface of the crystal so that eventually we were able to hear very clearly. This type of receiver would not work at all well nowadays because there are so many stations that they would all be piled upon each other, giving nothing but hash. In 1922, there was only one station in Pittsburgh. It wasn't long, however, before others appeared (I remember particularly WCAE). This was the beginning of my activity in radio which, has been going on for 75 years.

Beginning Amateur Radio

The most important part of those early years was the development of my interest and knowledge in radio, electronics and electricity. Shortly after moving to Ardmore, PA, at age 11, I acquired a one-tube broadcast band receiver made by Western Electric. It was of the regenerative detector type with a tuning capacitor for selecting the stations and a varicoupler to control the regenerative sensitivity. I had it on a small table beside the bed. I tried to keep that first radio as a souvenir but it met an untimely end. About 1963, while I was teaching at Haverford College, I had gotten together a small museum of unusual electronic gadgets and had them stored in a glass door cabinet in the science building. The College decided to put a

computer lab in the room where the cabinet was. Without asking me about any of the equipment, the professor in charge of the computer project had the room cleared. When I discovered what was happening, I asked what had been done with the exhibit case. I was informed, "Oh, all that junk was thrown out. There wasn't anything of value in it". So, my radio went with the rest of the treasures, some dating back before 1920. It wasn't long before I was trying to make my own radios, mostly of the one tube variety. A great deal of my learning came from people reading to me, mostly people who knew nothing about what they were reading, but, as they often said, "If you know what it's about, that's all that matters." I remember a funny thing that happened about this time. In a vacuum tube circuit, there is a resistor connected between the grid of the tube and ground (the negative terminal of the battery). This resistor is, or was, called the grid-leak, so named because it permits excess electrons to leak off to ground. One day, a man came to the door saying, "Would you like to buy a small pan to catch the drippings from the grid-leak in your radio? They cost only a dollar." As time went on, I met young people who were interested in the same sort of thing so I learned a great deal from talking to them. Along about 1930, I thought I would like to become a radio amateur operator. The ARRL Handbook was available in print only (about half as thick as today's version), containing all the theory, rules and regulations required by the F.C.C. to obtain a license. Today it contains all the new things that have been developed, but it doesn't treat the material that was new in 1930 with as much detail as it did then. Nevertheless, it contained a great deal of basic theory which I had to master. Such terms as kilo, mega, and micro kept me confused for a long time. I knew that a Farad of capacitance was so large that we used only a millionth of one and this was called a microfarad and that a millionth of that was a micro-microfarad. Then I heard about .0001 microfarad and then 100 micro-microfarad. One day, I realized all on my own that ten to the minus sixth meant micro. Then I figured out that a micro-micro must be ten to the minus twelfth Farad. This was such a revelation to me and I was so excited that I talked about it for a week! Nowadays, things have simplified because a micro-micro is called a pico. So, 100 micro-microfarad is 100 picofarad or abbreviated 100Pf. Oh, what a marvelous thing! So, a kilo-ohm resistor has a resistance of 1000 ohms, a megohm is 1,000,000 ohms, etc. I don't know how long it takes a modern child to learn such things, but to me it seemed like a tremendous accomplishment. I learned about resistors, capacitors, inductors, grids, plates, filaments, cathodes, etc. I learned about resonance and the formulae connected with these things. In order to take the F.C.C. examination for a license I had to learn the "Morse" code. This is not the original code used by Samuel Morse back in the 1830's, rather a modern version of it whose official name is International Morse Code. In the original Morse code dots and dashes were in different combinations. This was because the receiving device was a "sounder", a metal arm that clacked up and down instead of making a tone. A dot

involved two clicks close together, a stronger down-click and a lighter up-click. A dash had the same clicks but farther apart. The dots and dashes are very much more discernible in the modern Morse Code: referred to as CW. signals. I learned both systems as I found the evolution of the modern system rather interesting. So I spent many hours listening and practice-sending so that when the time came for me to take the exam, I was able to receive about 15 words per minute (the exam required 10 wpm). I figured it would be wise to be better than required so if I was nervous, I would have some leeway. The exam required the applicant to receive and send code for a period of five minutes with no more than three errors. Since I was perhaps the first blind person to take the exam, we anticipated some problems. We contacted the F.C.C. office in Philadelphia to ask them how to proceed. They were very interested in seeing what would happen. They agreed I should take the code exam by typing what I received on a typewriter and that I could answer questions orally and describe diagrams verbally.

Next week: The dreaded exam. (To be continued.)

The ARRL Letter
Vol. 20, No. 22
June 1, 2001
***************

IN THIS EDITION:

* +ARRL seeks FCC probe of long-range cordless telephone sales
* +New AMSAT satellite project on the drawing board
* +ARISS completes 15th space-school ham contact
* +Ham-sailor David Clark, KB6TAM, nearing his goal
* +FCC sets aside one license grant, short-terms another
* +New FCC members, chairman's reappointment confirmed
* Solar Update
* IN BRIEF:
This weekend on the radio
+Kid's Day is just around the corner
+FCC puts paper on par with e-filing for vanities
Florida ARES group activates to cover 911 outage
President Haynie attends RAC Board meeting
Vote on QST Cover Plaque Award
Writers wanted!
BBC to drop North American short-wave transmissions
Ham-Com 2001 is June 8-10
Joe C. "Pat" Patterson, W5VY, SK

+Available on ARRL Audio News

============================================================
Editor's note: The ARRL Letter and ARRL Audio News will be on vacation June
6. They will return June 13. The Solar Update for June 8 will be available
on the ARRL Web site and via W1AW.--Rick Lindquist, N1RL
============================================================

==>ARRL ASKS FCC TO INVESTIGATE LONG-RANGE CORDLESS TELEPHONE SALES

The ARRL has asked the FCC to investigate and "take appropriate action"
against several companies it alleges have been marketing so-called
"long-range cordless telephones" via the Internet. The ARRL took the action
in the wake of an interference complaint and numerous reports from the
amateur community about sales of the devices, some operating on amateur VHF
and UHF frequencies.

ARRL General Counsel Chris Imlay, W3KD, said the League was seeking the FCC
probe because the apparently uncertificated devices operate on amateur bands
and are capable of interfering with amateur communication. He also noted
```

that the devices are not likely to meet maximum permissible exposure levels for RF.

"ARRL has not been able to locate any FCC certification for these devices and, based on the advertised frequency bands and ranges, it is believed that none of these devices could be certificated, or legally marketed or sold, under FCC rules," Imlay wrote. The League said some of the companies may be selling similar wireless products that may operate on amateur or restricted bands.

The letter was addressed to FCC Enforcement Bureau Chief David Solomon as well as to Raymond LaForge of the FCC's Office of Engineering and Technology's Equipment Authorization Division and to FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth.

Imlay said the ARRL also is looking into the marketing of products such as 434-MHz video surveillance equipment and other "apparently non-certificated devices" that use amateur frequencies but are being marketed in the US to non-amateurs.

The ARRL was able to obtain one of the long-distance cordless telephones for testing. The device, made in China and bearing no FCC identification number or label, operates near 147 MHz with an output power greater than 3 W. Other such phones are advertised as having ranges of up to 100 km operating at power levels of up to 35 W on VHF and UHF.

ARRL Lab Supervisor Ed Hare, W1RFI, said he's received at least one report of actual harmful interference from a long-range cordless telephone to amateur communication. The amateur reporting it tracked the telephone to the home of a neighbor, who said he'd bought the device on eBay.

Hare said some long-range devices are legally certificated to operate on the 900 MHz or 2450 MHz Part 15 bands. Hare invited reports of unlicensed devices causing actual harmful interference to Amateur Radio operation to rfi@....

==>AMSAT PRESIDENT LAUDS AO-40 SUCCESS, LOOKS TOWARD NEW PROJECT

With a modicum of success already assured for the troubled Phase 3D/AO-40 project, AMSAT-NA President Robin Haighton, VE3FRH, says his organization already is looking toward its next bird. Haighton said AMSAT's newest satellite project could be up and running within three years, possibly sooner.

In an interview with the ARRL, Haighton lauded the "fantastic reports" and "great worldwide coverage" of the AO-40 satellite. Until this week AO-40 had operated its transponders in an experimental mode with uplinks at 435 MHz and 1.2 GHz and a downlink and beacons in the 2.4 GHz band.

AO-40 ground controllers have shut down the satellite's transponders in preparation for raising AO-40's perigee by about 200 km. AMSAT-DL President and AO-40 team member Peter Guelzow, DB2OS, said transponders will remain off "until further notice." The RUDAK beacon and the 2.4 GHz middle beacon

will remain up, however.

Haighton said this week that it's hoped the a slightly higher perigee will eliminate the effects of what he described as "a mysterious force" that alters the satellite's attitude when it comes through perigee.

While AMSAT continues dealing with AO-40, Haighton said it's also looking ahead to its next satellite, and design work is expected to get under way in earnest by this summer. "We would like people in apartments to have access to satellites with relatively small, easy compact equipment and not have to swing large antennas around," he said. "We're looking at our next satellite to provide that."

As plans now stand, the new satellite would--at least in a pinch--accommodate VHF users with omnidirectional antennas at perigee, plus users with good antennas at UHF as well as L band and S band. It also might employ digital modulation capabilities that, Haighton said, could make the new satellite "probably at least 10 dB better than anything we're currently using."

Like AO-40, the new satellite will not be a low-Earth-orbiting bird but have an elliptical orbit that Haighton said would be "very very similar to the current AO-40 orbit." The configuration would provide up to 17 hours or so of usage out of every 24.

"What we're actually looking at is a new class of satellite," Haighton explained. For the time being, the new satellite is going under the name "Project JJ" after the two people who came up with the idea--Lyle Johnson, KK7P, and Dick Jannson, WD4FAB.

"We've already started contacting launch agencies," Haighton said. He added that "a major design weekend" was set for July, and he expressed confidence that the new project could reach fruition "on the outside three years from now."

==>ASTRONAUT SUSAN HELMS BRINGS SMILES TO KENTUCKY VIA HAM RADIO

US Astronaut Susan Helms, KC7NHZ, took the microphone of NA1SS aboard the International Space Station May 31 to respond to questions from students at Daviess County High School in Owensboro, Kentucky. The contact marked the 15th Amateur Radio on the International Space Station QSO and the second with a Kentucky school.

"Welcome onboard Space Station Alpha. Go ahead with your questions," Helms invited. Eight students obliged with a dozen questions.

Helms told the high schoolers that if the station's communication systems were to fail, "we always have our ham radio, which we could use also to call people," she said. She told another questioner that she had been getting on the air from the ISS "on and off" depending on the crew's work schedule. She said she'd made a few contacts that morning. "I try to come to the ham radio and talk to people as much as I can," she said.

Helms said the international nature of the ISS program has involved having to deal with different languages and cultures. "My crewmates--Yuri and Jim--and I have worked very hard to become bilingual," she said, referring to cosmonaut Yuri Usachev, RW3FU, and astronaut Jim Voss. "All three of us have become bilingual so that we can communicate and talk in either Russian or English, and we're doing that extremely successfully," she said. In the future, she said, the ISS will have to become multilingual and multicultural.

Helms also told the students that NASA already was making plans to travel to Mars, "probably with international help." She called The Red Planet the most feasible target for an interplanetary space mission carrying human passengers.

Helms said she and the crew enjoy their "wonderful work" aboard the ISS but miss their families and friends on Earth.

The audience of students and guests included ARRL President Emeritus George S. Wilson III, W4OYI, who lives in Owensboro. The event also attracted extensive local news media coverage.

"We really are smiling ear-to-ear down here," Steve Morgan, W4NHO, said after the 10-minute contact. Morgan provided technical support at the school. The contact was made via AH6NM in Honolulu, and the audio was telebridged to the school.

The next scheduled ARISS contact will be next week with Henley Schools in Oregon via the Klamath County Schools Amateur Radio Club, KC7VWW.

==>ROUND-THE-WORLD HAM-SAILOR IS ON THE HOME STRETCH

Ham-sailor David Clark, KB6TAM, arrived May 30 on Fernando de Noronha and said all is well. He expects to resume his sail in a couple of days and plans to reach Fortaleza--some 350 miles distant--by early next week. Clark recently had departed Ascension after a brief stop. He's now is on the home stretch of his quest to be the oldest person to sail solo around the world.

Clark, who turned 77 on May 17, is hoping to make Fort Lauderdale by July. He is keeping in touch with wife, Lynda, and others primarily via ham radio phone patches. Fred Moore, W3ZU, has been running phone patches for Clark while Bob Reed, N6HGG, has also been keeping regular radio schedules with Clark since he departed Ascension. Both expect to continue working Clark short-path, now that he is nearer his Florida target.

Clark survived a disaster in February that sank his original sailboat, the Mollie Milar. His beloved canine companion Mickey was lost during the rescue efforts. Corporate sponsors and helpful hams in South Africa and elsewhere got him back into blue water with another sailboat--which he named Mickey in honor of his lost companion.

Clark reports the new vessel continues to handle well with no major problems. While in Ascension, he picked up a new autopilot and was invited by new friends on a neighboring yacht to celebrate his birthday, May 17, with a dinner party ashore.

For more information on Clark's journey, visit http://www.dclark.com and http://www.captainclark.com.--Archie McKay, K4GA

==>FCC SETS ASIDE LICENSE GRANT, ISSUES SHORT-TERM LICENSE

The FCC has set aside a recent license grant to a Florida man and issued a short-term grant in the case of an Illinois amateur. The two cases are among several recent FCC enforcement actions.

FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth said the Commission has set aside the Technician license of Joseph E. Mattern, KG4NGG, of Orlando. A former Tech Plus licensee--WW4WJD--who didn't make it past FCC-required retesting last year, Mattern was the subject of past FCC enforcement attention. He was relicensed on May 3.

"He was only back on the air for a few days before complaints started coming in, including one alleging use of a false call sign," Hollingsworth told ARRL. "He also was asked by the control operator to stay off several repeaters in the Orlando area."

In a May 16 letter, Hollingsworth said Mattern's Technician application now reverts to pending status. He said the latest complaints have been referred to the Enforcement Bureau for evaluation.

In an unrelated action, the FCC has issued a short-term license grant to General licensee Reyes Lugo, KB9YDM, of Chicago. Like Mattern, Lugo--who once held an Extra class ticket, NP3N--has a track record with the FCC's Enforcement Bureau. Last summer, he was requested to retake the Extra exam but passed only the Morse code element and his license was canceled.

Lugo subsequently retested and was granted KB9YDM. The FCC set aside the grant while it investigated complaints it had received about Lugo's radio operations. The Commission said those allegations had "raised questions" about Lugo's qualifications to hold an amateur license.

Hollingsworth informed Lugo on May 10 that the FCC was granting his General application for one year. After that, Hollingsworth said, Lugo would be allowed to renew, provided there were no violations of any sort on any frequency.

==>SENATE CONFIRMS FCC CHAIRMAN, COMMISSIONERS

The US Senate has confirmed President George W. Bush's three nominees for the FCC. The action gives Republicans a 3-2 majority on the regulatory panel.

FCC Chairman Michael K. Powell also was confirmed for a new five-year term.

The new Commissioners are Republicans Kevin Martin, a White House aide and deputy general counsel of the Bush campaign and Kathleen Abernathy, a telecommunications attorney and former advisor to FCC Commissioner James Quello, and Democrat Michael Copps, a former aide to Sen Ernest Hollings of South Carolina, the incoming Senate Commerce Committee Chairman.

Confirmation by the full Senate followed a 17-0 vote in favor of the nominees by the Senate Commerce Committee. Abernathy and Copps were sworn in this week.

==>SOLAR UPDATE

Propagation guru Tad Cook, K7VVV, Seattle, Washington, reports: Average daily sunspot numbers rose nearly 28 points and average solar flux increased slightly over the past week. Solar flux peaked on Thursday, May 24, at 170.3 and has been declining since. Solar flux for Friday and Saturday should be around 130, and 125 for Sunday and Monday.

Flux values are expected to rise very gradually, reaching 140 around June 8, 145 around June 11, and 150 around June 14. This is based on the recent solar rotation, and is blind to any new activity that may emerge.

Last week's prediction that solar flux would peak over the weekend was off. Instead it had peaked on the Thursday when the bulletin was written. A geomagnetic disturbance forecast for Sunday was only brief but came up again on Monday when the planetary K index was four during several periods.

Sunspot numbers for May 24 through 30 were 171, 146, 167, 189, 190, 131 and 105 with a mean of 157. 10.7 cm flux was 170.3, 161.9, 147.4, 146.9, 143, 138.5 and 132.3, with a mean of 148.6, and estimated planetary A indices were 9, 8, 8, 9, 18, 10 and 5 with a mean of 9.6.

==>IN BRIEF:

* This weekend on the radio: The Major Six Club Contest is June 1-4; the QRP TAC Contest (CW), the WW South America CW Contest and the IARU Region 1 Field Day (CW) are the weekend of June 2-3. JUST AHEAD: The ARRL June VHF QSO Party, the ANARTS WW RTTY Contest, the Portugal Day Contest, the Asia-Pacific Sprint (SSB), and the TOEC WW Grid Contest (SSB) are the weekend of June 9-11. Kid's Day is June 16.See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Kid's Day is just around the corner: On June 16, 1800 to 2400 UTC, kids of all ages are invited to experience ham radio during Kid's Day. Amateurs are encouraged to invite youngsters into their shack to enjoy the fun. Kid's Day began in 1994 with a one-hour program created by the Boring Amateur Radio Club in Boring, Oregon. The youngsters exchanged names and their favorite colors. Forty kids participated. Last year, more than 1000 took part in the event, now sponsored by ARRL. There's no limit on operating time. The suggested exchange is name, age, location and favorite color. You may work the same station again if the operator has changed. Call "CQ Kid's Day." Complete information is on the ARRL Web site, http://www.arrl.org/FandES/ead/kd-rules.html and in the June issue of QST, p 48.

* FCC puts paper on par with e-filing for vanities: The FCC has put paper vanity call sign applications on an equal footing with electronic filings in

terms of processing priority. The change was instituted a few months ago, according to Bill Cross, W3TN, of the Wireless Telecommunications Bureau, who spoke May 20 at the Dayton Hamvention FCC forum. Previously, the FCC had given priority to electronic applications for vanity call signs. "There is no preference anymore for electronically filed vanity applications," Cross said. "What they do now is key them in all together, and then the paper-filed applications have the same chance of being selected as the electronically filed ones." Vanity applicants should be familiar with acceptable call sign formats before filing. Cross warned that applications seeking unavailable call sign formats will be dismissed.

* Florida ARES group activates to cover 911 outage: On May 13, a water leak shorted out Jacksonville Fire-Rescue Department's telephone and radio systems, including the 911 trunk to the Jacksonville Sheriff's office. This event knocked out all emergency radio and telephone traffic. All police and rescue traffic was diverted to the single UHF repeater normally used for routing private ambulances to area hospitals--resulting in an instant frequency overload. JFRD officials turned to Amateur Radio. The ARES Quick Response Team was on-scene within 30 minutes of the call-up. In all, 21 hams assisted in passing continuous fire and rescue radio traffic over the 146.76 MHz repeater for nearly three hours. Duval County Emergency Coordinator Miller Norton, N4RYX, told the ARES volunteers, "We are the last defense and simply cannot fail to respond when called. Job well done."

* President Haynie attends RAC Board meeting: ARRL President Jim Haynie, W5JBP, was a guest at the Radio Amateurs of Canada Board of Directors meeting April 26-29 in Cornwall, Ontario. RAC President Ken Oelke, VE6AFO, and Federacion Mexicana de Radio Experimentadores (FMRE) President Pedro Mucharraz Gonzales, XE1PM, attended the ARRL Board's January meeting. The RAC returned the honor in April. "It is important that the respective organizations work together in establishing a strong association and establishing common goals in the Americas," Haynie said. "With WRC-2003 looming closer and closer, our goal of representing Amateur Radio requires a united effort." During its April meeting, the RAC Board adopted eight "core values" that included a pledge to "actively seek and protect adequate spectrum and antenna space for Amateur Radio activities and work in cooperation with other organizations and governments to ensure their availability at all times." The full list of "core values" is on the RAC Web site, http://www.rac.ca/core.htm.

* Vote on QST Cover Plaque Award: The winners of the QST Cover Plaque Award for May was Bob Lewis, AA4PB, for his article "An Automatic Sealed-Lead-Acid Battery Charger" Congratulations, Bob! ARRL members are reminded that the winner of the QST Cover Plaque award--given to the author of the best article in each issue--is determined by a vote of ARRL members. Voting takes place each month on the Cover Plaque Poll Web page (ARRL Members only), http://www.arrl.org/members-only/qstvote.html. As soon as your copy arrives, cast a ballot for your favorite article in the June issue of QST. Voting ends June 15.

* Writers wanted! We're looking for a few good stories--well, lots of them, actually. ARRLWeb seeks your Amateur Radio-related feature stories for posting on our site. You don't have to be a pro--you just have to have something to say that others will want to read. We'll correct your spelling and grammar errors and pay you to boot. Submittals should be organized and coherent and deal with a topic that others in the amateur community will want to read. Good photographs are a real plus, and we'll consider some submittals for use in QST. Articles on everything from antennas to zeners are welcome in electronic form, with text and images e-mailed as separate files. Submit articles for consideration to Rick Lindquist, N1RL, n1rl@....

* BBC to drop North American short-wave transmissions: The BBC World Service says it's eliminating its English short-wave transmissions to North America, Australia, New Zealand and the Pacific Islands on July 1. "The Beeb" says it will focus its delivery in English via its FM and medium-wave "re-broadcasting partnerships," together with 24-hour on-line audio service. "We know that our listeners have migrated away from short-wave and are now accessing us on FM, via the Internet and also in some areas on satellite, cable and on mobile devices," the BBC said. "In the US, three times as many people listen to us on FM as on short-wave, and one and a half million users access on-line each month." The BBC says the money saved by closing short-wave transmissions to North America will go towards funding its investment in future technologies. It's been reported that the move will save the BBC some $700,000 a year.

* Ham-Com 2001 is June 8-10: The Lone Star DX Association announces Ham-Com 2001, June 8-10, in Arlington, Texas. ARRL President and LSDXA member Jim Haynie, W5JBP, will be the keynote speaker. Noted DXer and DXpeditioner Martti Laine, OH2BH, will talk at the DX luncheon. ARRL Vice President Kay Craigie, WT3P, will describe "The Big Project" in a Saturday presentation. In addition, the ARRL will offer its first all-day classroom version of the Emergency Communications Certification Course. For the complete Ham-Com schedule, visit the Ham-Com Web site, http://www.hamcom.org .

* Joe C. "Pat" Patterson, W5VY, SK: VHF pioneer and ARRL member Joe C. "Pat" Patterson, W5VY, died May 9. He was 93. In the 1940s Patterson was active on 50-MHz and 144-MHz AM and achieved many firsts. Patterson made the first 50 MHz contacts from the US to Uruguay and France. In June 1950 he worked W8WXV on 144 MHz for the first known 2-meter contact via sporadic E, which also set a new distance record for that band. He was one of the first to work all states and more than 100 countries on 50 MHz. He also made some of the earliest contacts via satellite and was also active on 432 MHz.--Derwin King, W5LUU

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

243. Kid's Day

Yahoo group: m_a_r_s
Date: 2001-06-05 04:32:04 UTC
From: Sandip Adiwarekar
Topic: 243 Message: 243

Hi everybody!!!
Here is the INFO about the KID'S DAY :-

Purpose: Kid's Day is intended to encourage young people (licensed or not) to enjoy Amateur Radio. It can give young people hands-on on-the-air experience so they might develop an interest in pursuing a license in the future. It is intended to give hams a chance to share their station with their children.

Dates: June 16, 2001.

Time: 1800 to 2400Z. No limit on operating time.

Suggested exchange: Name, age, location and favorite color. You are encouraged to work the same station again if an operator has changed. Call "CQ Kid's Day."

Suggested Frequencies: 28350 to 28400 kHz, 21380 to 21400, 14270 to 14300 kHz and 2-meter repeater frequencies with permission from your area repeater sponsor. Observe third party traffic restrictions when making DX QSOs.

For more detail info visit :- http://www.arrl.org/FandES/ead/kd-rules.html

73s,
de VU2UGO

Becoming a Ham - Part 2
By T. A. Benham, W3DD

I went for the exam in May of 1931. It was a fun experience. They spent three hours with me, unheard of these days. The questions were easy to handle. The man assigned to work with me read them and I answered. They were not multiple-choice questions, but rather such questions as, "Give the regulations relative to amateur broadcasting." "What is the function of a capacitor in a resonant circuit." And many more of that sort. Then it was diagram time. I was asked to describe a circuit for a two vacuum tube receiver suitable for use in the 80 meter band. Then, describe the circuit for a typical oscillator- amplifier transmitter for the 40 meter band. I had no trouble with these questions, but the examiner and I got into an argument over a capacitor that I put in the circuit for the transmitter. He said it was not supposed to be there. I said that it was and that it was necessary to keep the grid bias constant during the part of the signal from the oscillator when the signal was negative. He said, "Wait, I will go look it up". I said, "Look on page ... in the handbook." He came back in a couple of minutes and said, "You're right. Go on." Then came the code test, receiving part first. They had a paper tape with holes punched in it which, when drawn through a machine, sent dots and dashes. I told the examiner I would like to have a few minutes to get used to their typewriter. So, he let me type on it for a couple of minutes and then set the code machine going. For the first few seconds, I had trouble getting synchronized so that my fingers would follow what I heard, but I got the five minutes in finally and had two errors. The sending part was easy. He read a sentence and then I sent it. He had me do about four or five sentences and declared that was enough. After five minutes of consultation with someone else in the office, they announced I had passed and would receive my license in a month or so. I waited with tremendous impatience until I got the "ticket" saying that my callsign was W3DD. That was 70 years ago last May, 2001. I still have it and am still active. We also have it as the license number for our car. Since the "ticket" arrived after we had gone on vacation, I didn't get on the air until October, 1931. My first contact was October 31, 1931, at about 5:00 PM, with W4OG in Salem, NC. It was an exciting time for me and for Dad, who had read so much for me and who had helped buy radios and parts. My first receiver was a two tube regenerative 40 meter one that I built and the transmitter was an oscillator-amplifier, called an MOPA system, meaning "master oscillator power amplifier." The amplifier tube was a UX-210 with 500 volts on the plate and about 20 watts output. We had a mishap with it before I was able to make a contact. Dad got the 210 tube for me at

our favorite radio store, M & H in Philadelphia, later to become H & R. For some reason, the tube behaved in a manner that indicated to us it was defective. It turned purple and drew far too much plate current when we tried to use it. Dad took it back and convinced Maury it was defective. Maury didn't want to admit it, but he gave us another tube and this one behaved for years. Either the first tube was bad or I learned how to handle the second one properly. I remember rather vividly one night soon after, Dad on his way from work, walking down the street carrying a heavy 6 volt storage battery. He had stopped at the Pep Boys store which he passed on his way from the train. This was to run the filaments of the receiver tubes. Another evening, just before Dad got home, I was working some stations. The receiver was not very stable, so the slightest disturbance in the electrical system would cause the signal to change frequency slightly, making it necessary for me to retune the dial to get it back again. Dad came in through the back door and said, "How's it going?" and snapped on the light. With that, the signal disappeared and I cried, "Oh damn, you made me lose the signal." He said in a hurt tone, "Well, alright, I'll get out of here". I jumped up and went after him. "I'm sorry, Dad, I didn't mean it the way it sounded. It's only that signals jump when the light is turned on. Come back and let me show you how things are doing." So he came back and chatted for a few minutes.

The story of how my antenna got put up is a story in itself. Suffice it to say that an antenna is not a simple hunk of wire thrown out the window or fastened to the bed springs. To get the 20 watts generated by the 210 tube, much care must be taken to have the wire just the right length, have it insulated at each end so the RF power does not go into the tree or the house or whatever holds up the wire, and the energy must be transmitted to the wire by a means that does not lose any of it. This is called "matching" the feed line to the antenna. To get this done Dad pressed one of his office cohorts into service. Mr. Springer came out one Saturday and climbed a ladder and a telephone pole while I measured the wire and fashioned the feed line system that was to go from the breakfast room window up to the end of the antenna. The feed line consisted of two parallel wires about five inches apart and held in position by insulated rods. We called it the "bird ladder." The connections from the output of the UX-210 were made to two special feed-through insulators that conveyed the energy through a narrow piece of wood fitted under the window sash. Thus, the window could be raised and lowered without interfering with the feedline system. This was my first Ham setup which lasted for two years. It was rebuilt in late 1933 or early 1934 for a special occasion that will be explained later.

vacation. They will return June 13. This is an abbreviated
Letter produced by the editorial staff. See you next week.
============================================================

== >HamCom Promotes Education in Amateur Radio

The West Gulf Division Convention and HamCom 2001 is just
days away--June 8-10--at the Arlington, Texas, Convention
Center. According to this year's Chairman, Maury Guzick,
W5BGP, it promises to be an education in Amateur Radio. "For
starters we have a new attraction this year that's never
been done before," Guzick wrote. "The ARRL and Ham-Com have
joined together to bring the ARRL Amateur Radio Emergency
Communications Course to you, live and in-person. It's the
```

same course as the one ARRL offers on-line, but with a live teacher in a classroom style."

ARRL Public Service Specialist Steve Ewald, WV1X, will conduct the two-day course at HamCom. Students have pre-registered and will attend class sessions Saturday morning and afternoon, completing the course Sunday morning. This is the first time that Level I: Introduction to Amateur Radio Emergency Communications (EC-001) will be offered as a classroom course at a weekend convention.

To learn more about the ARRL Certification and Continuing Education Program and the Amateur Radio Emergency Communications Course, see http://www.arrl.org/cce .

== >Kentucky Hams Substitute Their Repeater For "Deaf" 911 System

Twice within a 24 hour period, Harold Hicks, KE4HON, an EMT for the Whitley County, Kentucky ambulance service, and his father, Jim Hicks, WB4CTX, Asssistant Section Manager, Kentucky Division used an HT, the KB4PTJ 444.050 MHz repeater and a telephone to relay emergency information to 911 dispatchers.

On Sunday morning, May 27, Whitley County and McCreary County Emergency Medical Services responded to an automobile accident in a remote area where the two counties join. Both ambulance services lost radio contact with their 911 dispatchers due to the remoteness of the area. They could not relay patient information to their dispatcher, their location, nor advise them as to whether or not they needed a helicopter to fly the patient out. KE4HON, using his HT, contacted WB4CTX via the KB4PTJ repeater and asked him to relay information to the respective 911 dispatchers. Using the repeater and his home phone, Hicks advised Whitley County EMS that the patient was conscious and alert and that the helicopter and rescue crews could stand down. He told the McCreary County 911 that their unit was ok and would be the one transporting the patient.

Incredibly, less than 12 hours later, another accident occurred in almost the same place and with the same consequences regarding loss of 911-repeater contact. The same situation played out-Hicks-to-Hicks-to 911. Whitley County EMS was dispatched and the patient was brought to the hospital.

Again Amateur Radio stepped into the breach and rendered a public service. Incidentally, the KB4PTJ repeater and the ambulance service repeater are less than three air miles apart--John Meyers, N4GNL

== >IN BRIEF:

* Alinco still catching up with service issues following move: The transfer of Alinco's distribution system from California to ATOC Amateur Distributing in Ohio is nearly complete, according to Craig Cota, a principal with ATOC. Complicating the transfer was the fact that the Dayton Hamvention occurred as the transition was taking place. "Our timing couldn't have been worse," said Cota. "We were literally unloading a moving van, and driving merchandise directly to the dealers at the show." One aspect of the transfer still pending is the service function. "We had hoped to have factory training personnel work with our staff in the transition. Unfortunately, plans were delayed," said Cota. "We will continue to honor warranty claims, even if the warranty expires during the transition period." For More Information: http://www.alinco.com/usa.html .

* ARRL 2001 Atlantic Division Award Winners announced: The ARRL Atlantic Division Awards Committee has named Roy Heimel, AB4XS, 2001 Atlantic Division Ham of the Year. Dennis Silage, K3DS, received the 2001 Atlantic Division Technical Achievement Award. The committee members made their choices based upon ballots received. Heimel has served his club, the Headwaters ARC, in many capacities and has organized and taught amateur radio licensing courses. He has been associated with the Boy Scouts for over 22 years, and served as a Girl Scout leader. Silage, K3DS, is the technical chairman for the Delaware County ARA and the Mid-Atlantic ARC. He is a frequent speaker on technical subjects at amateur radio clubs through out the Philadelphia, Pennsylvania area--Bernie Fuller, N3EFN, ARRL Atlantic Division Director.

* Eleven year-old ham gets Life membership and 60-year plaque: Ryan Rose, K3RLR, of Pasadena, Maryland, got more than he bargained for at the Dayton Hamvention. Originally licensed in May 1999 as a Novice--KB3DVA--Ryan now hold a General ticket. This year at Hamvention he took out an ARRL life membership (thanks to his dad, Bob, AA3RR). Due to a vendor error, Ryan's plaque credited the 11-year-old with 60 years of membership instead of Life Membership! The problem was corrected, and the correct Life Membership plaque arrived a few days later.

* Francis Shepard, W7HAH, SK: Francis Shepard, W7HAH, of Stevensville, Montana died May 16. He was 79. An ARRL member, Shepard held VUCC on 50, 144 and 432 MHz. His 50-MHz certificate was endorsed for 625 grid squares. "Shep led the 2-meter EME roles for contacts with a four-Yagi system. As a

ham, he lent a hand and his friendship to many, far and wide," said his friend, Pat Hamilton, WA7PDC. "I will miss listening to W7HAH work the stations I barely even heard."

* Indiana policeman receives first Radio Hero Award: Bill Ward, N9RHY, of the Henry County, Indiana Sheriff's department received the Radio Hero Award in recognition of his use of Citizens Band radio in the capture of two suspected murderers. Ward is the first recipient of this award, which will be presented biannually by its sponsors-REACT International Inc, Cobra Electronics and Popular Communications magazine. The incident involved two Vermont high school students who were suspected of murdering a husband and wife-both professors at Dartmouth College. Ward intercepted a truckdriver's CB call asking if anyone could help these youths with a ride further west. Without identifying himself, Ward told the youths to wait and someone would be along to pick them up! In an earlier story regarding REACT, ARRL and REACT signed a Memorandum of Understanding intended to promote joint coordination of the resources of both organizations and recognize the capabilities of individual members to facilitate the flow of information to and from the public during disaster and emergency situations. For the complete MOU, see http://www.arrl.org/FandES/field/mou/react.html.

* ISS Commander Frank Culbertson is now KD5OPQ: The latest NASA astronaut to become an Amateur Radio operator is the commander of Expedition 3, Frank Culbertson, KD5OPQ. Joining him on the International Space Station as part of the Expedition 3 crew will be cosmonauts Mikhail Turin and Vladimir Dezhurov, who will also have Amateur Radio licenses prior to launch. Culbertson has logged over 344 hours in space. Shuttle Mission STS-105, scheduled to fly in August, will ferry Commander Culbertson to the ISS. It will return with Expedition 2 crewmembers Susan Helms, KC7NHZ; Yury Usachev, RW3FU; and James Voss who have spoken via Amateur Radio with students in 15 schools during scheduled ARISS QSOs.

* Mario Acuna, LU9HBG, elected Fellow of AGU: Mario Acuna, LU9HBG, has been elected Fellow of the American Geophysical Union, an honor reserved for the top one percent of the scientists working in Geophysics and Space Physics. The award was made at the AGU Spring Meeting in Boston. Acuna, well known in the AMSAT/Satellite community, helped in the development of P3A, AO-10 and AO-13. For many years Acuna has been the supplier of high accuracy magnetometers flown on the UoSATs , professional earth-orbiting satellites and deep-space probes.

* Meningitis scare at school brings out Ohio ARES unit: When two fifteen year old students in a near-by community died of Meningitis, the Salem, Ohio community hospital set up antibiotic dispensing stations at the southeast elementary school as a precaution. At times the line exceeded 1000 people. Hospital phone lines were jammed by incoming calls. People standing in line to get medication were using their cell phones making matters worse. ARES EC, KA8OEB, activated the Salem club and set up stations at the school and hospital. Members of Columbiana County ARES and Salem Area ARA assisted, using 2-meter and 70cm repeaters. ARES services ran for two days. More than 37000 people in Salem and Alliance received antibiotics.

* SKYWARN operator struck by lightning: Danny Townsend, KB5ZEA, was struck by lightning on Sunday, May 27, while engaged in SKYWARN reporting. As Townsend keyed his mike to respond to KD5JGW's weather report, lightning hit the tower, destroying the station equipment and knocking Townsend to the floor. He was taken to the hospital and found to be OK, but he says he still has a ringing in his ears. "As we operate Skywarn and ARES, we need to keep in mind the dangers we can be exposed to," said Townsend. " I have always been conscious of lighting and what it can do, but have continued to operate during bad weather. I will continue to do what I can to help my fellow man, but with a little more caution. I will attempt to rebuild my station with total emergency power as well as attic antennas."--KB5ZEA.

* Walter Taylor, K2MLT, SK: Walter Taylor, K2MLT, of Hammondsport, New York- died April 20. He was 69. A fourth-generation vintner, Taylor was also an artist, inventor, aviator and poet. An ARRL member, his radio interests also included ownership of two commercial broadcast stations. Among his survivors are his wife, Lillian, three sons, a daughter, and two grandchildren.

* Western Washington DX Club to host Northwest DX Convention: The Western Washington DX Club will host the Northwest DX Convention--DXing in the 21st Century!--in Seattle, Washington, July 20-22 at the Everett Holiday Inn. Speakers include Bill Fisher, W4AN; Carl Luetzelschwab, K9LA; DXCC Manager Bill Moore, NC1L; Garry Shapiro, NI6T and NCJ Editor Dennis Motschenbacher, K7BV. DX videos will be shown hourly. Send questions to convention@... or to WWDXC, PO Box 395, Mercer Island, WA 98040. For on-line registration and the up to date convention agenda, visit the WWDXC Web site, http://www.wwdxc.org/convention .

* WIDAD, K1MOM and K1D call signs mean it's Kids Day again: Peter and Jeanne Schipelliti, W1DAD and K1MOM, respectively,

and their kids Geena, age 6 and Luciano, age 4, have activated the special 1X1 call sign, K1D. The family wanted to promote ARRL's Kid's Day and assist hams in igniting the interest of children in Amateur Radio. They plan to use the call sign from June 2-17. Kid's Day is June 16, from 1800-2400Z. Listen for K1D on 28350, 21380, 14270, 7230 and 3895 kHz. Hams who plan to put youngsters on the air for Kid's Day, can get a free Amateur Radio coloring book and youthful operating aids from K1MOM at: k1mom@.... For more info on Kid's Day, see: http://www.arrl.org/FandES/ead/kd-rules.html .

From: mukesh jaitley
Topic: 248 Message: 248

Hello Friends!!!

It has been given to understand that the problem of chinese long range cordless telephone can be best solved by approaching Department Of Telecommunication, Mumbai Circle.

The methodology can be as follows :
a. make aware the DOT of our problem regarding the interference of long range cordless telephone in our HAM band.

b. confirm from the DOT regarding the legality of using the long range cordless telephone.

c. if the use of long range telephone is illegal then furnished the details of people using these long range cordless telephones to DOT who might take suitable action against the offenders or may be also they may disconnect their telephone lines.

Any of our HAM who knows somebody higher-up in the DOT-Mumbai Circle can be of good help to us in approaching the department
and in turn helping the HAM faternity getting rid of this problem (QRM).

regards,
VU2UGJ

MUMBAI AMATEUR RADIO SOCIETY.

Dear members,

We conducted a simulated Disaster Communication Exercise on 9th & 10th June 2001.
5 teams participated in the exercise consisting of the following:-

Team [A] - VU2NLF & VU3MBF location : Malavali.
Team [B] - VU2ZRS & VU3AUA location : Wangaum.
Team [C] - VU2JPN, VU2SWS & VU2LIB location : Dhanu.
Team [D] - VU2UGJ, VU2UGO & VU3SOB location : Asangaon.
Team [E] - VU2HIT & VU2RIO loaction : Boiser.

All locations were able to establish contacts with all teams successfully. But the best part is 3 Teams were carrying Laptop Computers, Team -A, B, D. All 3 teams successfully worked digital on HF with each other.
Team A transmited a Message from Malavali to Team D in Asangaon on 7.020 Mhz [40 meters] as under :-

Team A Questionaire
---

1. What is the name of the village, Taluka & District ?
A. Village: Patan, Taluka: Mavad, District: Pune

2. Name of the Sarpanch of the village ?
A. Mr. Gulab Tikone

3. Population of the village ? Total & per family ?
A. About 2500. 5 to 6 people per family.

4. Male:Female Ratio ?
A. 60:40

5. Old:Young Ratio ?
A. 80:20

6. Migration levels of humans, birds & animals ?
A. No migration.

7. Are there animal husbandry / Poultry ?
A. Yes.

8. What are the water facilities ?
A. Tap water.

9. What are the electric facilities ?
A. Tube light, Fan, TV

10.What are the communication facilities ?
A. Telephones.

11.What transport facilities are available ?
A. Auto-rickshaw, Train.

12.What banking facilities are available ?
A. Banks are there.

13.Are postal facilities available ?
A. Yes

14.Are medical facilities available ? Hospital's name, Doctor's Name ?
A. No Hospitals. Four doctors available at Railway Station.

15.Are Govt. medical aids available ? Family Planning, Vaccination ?
A.

Becoming a Ham - Part 3
By T. A. Benham, W3DD

The FCC pays me a visit

There were two incidents involving the FCC that occurred about this time. One afternoon there came a knock at the front door. It was a man from the FCC. "I've come to inspect your log." "Ok," I said, "come out to my radio room." We were required to keep a record of every transmission. I opened the file drawer and pointed to the cards. He said, "Pick one at random." I did and handed it to him. "I can't read this! It's in Braille, or something." "I keep the log that way." "But, I can't read it." "The law doesn't say how the log should be kept." "You're right," he replied. "Read this card for me." I did so and he was satisfied. He stayed a while and chatted about how I got along. The other incident happened a couple of years later. I received in the mail a "pink ticket," a warning that I was interfering with a commercial station on a certain frequency. When I thought about it a while, I realized the frequency mentioned was exactly twice my operating frequency. After studying the problem, I discovered that the tuning of the antenna was seriously affected by rain. The interference was eliminated by carefully tuning the system so that rain did not cause the second harmonic of my transmitter output.

Some Special Friends

A Ham friend from this period deserves some attention. He was Bob Maloney of Perth Amboy, NJ, W2PBY. He appeared in my log on March 9, 1932, and was in it many, many times until 1938. He and I chatted in CW almost every day. A good deal of my skill in operating, sending and receiving the code is due to our contacts. He came to visit a couple of times, staying for a few days each time. I went off to college in 1934 so we did not have as many contacts after that except for a visit with him to the huge commercial ship to shore station at Tuckerton NJ, WSC. I used to listen to it handling messages many times so I knew its procedures, jargon, and format. It was a Saturday afternoon, so the place was not busy. In fact, only the operator was there. After we chatted a while and the operator had shown me everything he could, I sat down at the operator's position and located the bug and dials. A bug is a key that send dots automatically in order to increase sending speed. It has the official name of Vibroplex, probably the name of the original one, but there have been several other manufacturers since the first. The operator showed me the switch which disabled the transmitter, turned it off, and said, "Go ahead, practice sending and get used to the feel of the

thing." I played around a few minutes sending nonsense sentences and tuned the receiver a bit. Suddenly I found a ship calling WSC, so without saying anything, I flipped the switch to "on" and began to answer the ship. The operator jumped up and shouted, "What are you doing, you can't do that." Pause. "Oh hell, go ahead, you seem to be making out alright." I always carried a Braille slate with a file card in it in my pocket along with my stylus, so I grabbed them with the other hand and put them on the desk. By this time, the ship had gotten my signal and was ready to reply. He said he had a message. I sent, "g a (go ahead)." He sent a message at about 25 wpm. I copied it without trouble, acknowledged and signed off. The operator of WSC was flabbergasted, jumping up and down with excitement and congratulations. I said, "Do you want me to read the message to you so you can get it in your log?" He said, "I have it. I wrote it at the same time, but read it to see if we agree." We agreed and all was well. You can imagine my excitement at all that and the pleasure it has afforded me over the years since. I had a similar experience except not so exciting one other time at about the same age. I had learned the old Morse code, as I mentioned earlier, but didn't have a chance to use it. However, one afternoon I was with a couple of friends when we went to the operating room of W I P, the station that operates on 610 KHz and is now known as the "Sports" station. At that time, about 1932, it played music and such, but it was also in communication with other stations by wire. They used old Morse to communicate between stations in the network of that time. As we were standing in the communications room talking, I heard the "sounder" send W I P W I P. No one paid any attention to it. After about four or five W I P's I said, "Hey, isn't that your call?" The operator on duty jumped and said, "Oh my god, yes", and ran to the desk. Of course, I was the hero of the day. One evening in September of 1938, I came home from a job I had at the time. I was greeted by Mother who said, "I have some bad news for you. Bob died the other day. He was only 25. He just dropped over while shaving. Here is a note from his mother." Of course, that was a sad moment in my life as we had had so many hours of pleasure together and now I would never hear W2BPY again. After thinking about it for a few days, I decided I would like to have something of his as a memento. I wrote to his mother and asked her if I could have his bug, the telegraph key that he had used all those years. She sent it to me. I have it on my desk even today beside the one I used then and still use. Mine is set to be used at 30 words per minute, considered to be quite fast, and his is set at 22 wpm. I left mine at the speed we always used after I got good enough, but I set his for 22 wpm because it is necessary to send at a slower rate some times. Also, some days I don't seem to be sufficiently alert to keep up the faster rate. Another interesting friend I came to know quite well was Howard Humpton, W3BY. My log shows I first contacted him in November, 1931, just after I got started. He lived close by, so he invited me to his house. I learned he was a ship's radio operator home on leave. He was not married and lived with his parents when he was home. He was an excellent CW

operator and helped me get my speed up and my sending as perfect as possible. I finally got good enough at 30 wpm for him to remark, "Gee, I can't tell whether you are sending or a machine is doing it." It has always been my ambition to send so that people would ask if I was using a machine. W3BY was one of my favorite call signs. I loved to hear it on the air. Howard sometimes called me on the phone. When I picked up the handset and said hello, and he was sure it was me. I would hear dot dash dash dot dot dot dash dash dash dot dot dash dot dot which is W3DD. He would carry on the entire conversation with his key sending code. Sometimes I would get my bug and a buzzer and answer in code, too. Of course, we could have done it over the air just as well. We did many things together. One evening he took me to Philadelphia to hear and meet Ted Weems and his orchestra. Naturally, Ted Weems became one of my favorite band leaders. The piece he did that I liked the most was "Heart Aches" which had a marvelous whistler featured in it. One evening, in Spring of 1932, he took me down to the Philadelphia dock area and took me aboard a ship that was anchored there. I forget the name of the boat and its radio operator, but he introduced me to both. The station call sign was W N W. I was allowed to operate it with the hand key, not his bug, and I contacted two or three ships at sea. I saw Howard, W3BY, off and on for many years. We would contact each other by Ham radio while he was at sea. He had his Ham station on board, and he called by phone when he was home on leave. All Hams were off the air during World War 2, when I began teaching Physics, Electronics, and Engineering at Haverford College, but were back in action immediately after. I was very active for a couple of years after the War, but then I got away from it for a while. I remember running into W3BY two or three times during those relatively inactive years. In July, 1962, the phone rang and when I answered it, there was the voice of W3BY. He asked me if I could get on the air to have a chat. He was staying somewhere near by. He said he had a station in his car and would call me on a certain frequency at 5:00 PM that day. I didn't tell him I had no transmitter. My receiver was in good working condition as I had been using it to contact satellites. So, between his phone call and 5:00 PM, I hurried to put together some sort of a transmitter. By schedule time I had a one tube thing with a few watts output. I called W3BY several times, signed my call, W3DD, and set about to listen on the agreed frequency. Much to my surprise, a station replied and signed W5DD. I about fell off of the chair. The long and short of it was that Howard had lost his original call, W3BY, and requested the F.C.C. to give him W5DD. Being an old-timer, he was granted the favor and got as close to my call as he could. His residence was in a state that came under the fifth district, which is how he got the W5 designation. This event gave me the incentive to get myself on the air properly, so a Haverford student helped me build a transmitter kit and put up a proper antenna. When Howard left Ardmore to go back to his ship, we kept in touch all the way down to New Orleans, where he was living when ashore. I heard and contacted him now and then for the next few years. In about 1973, I was talking

to a Ham on a ship just off the north coast of Brazil. He said he was from New Orleans. Since I hadn't heard from Howard for two or three years, I asked him if he happened to know W5DD. He replied "Yes, and he was a good friend of mine." "Was?" I asked. He told me that W5DD had died at sea two years ago. Howard had always been a rather "sickly" person, always having something bothering him, so it wasn't a big surprise, but I certainly was sad to think I would never

============================================================

==>HAM RADIO IS HOT AT "THE BIG PROJECT" PILOT SCHOOL

The Texas elementary school serving as a pilot school for the ARRL's "The
Big Project" educational initiative already boasts more than a dozen new
hams--including the teacher who's spearheading the program--and a lot of
enthusiasm. Now, thanks to The Big Project, it's got some new ham gear.

The Everette Lee DeGolyer Elementary School in Dallas
(http://www.degolyer.com) recently received some $2600 worth of equipment
paid for through the ARRL Education Project Fund to equip its ham radio club
station, K5DES. Plans call for establishing similar programs at other
schools across the US, after The Big Project--formally The ARRL Amateur
Radio Education Project--is fully in place and under way.
```

"Once we get a coordinator--an educational professional--at Headquarters, we'll begin to develop additional curriculum and coordinate with additional schools across the country," said ARRL President Jim Haynie, W5JBP. Haynie proposed The Big Project shortly after taking office last year. The ARRL Board has adopted it as a League program, but it's still under development.

The ARRL Education Project supplied a Yaesu FT-847 HF/VHF/UHF multimode transceiver plus Cushcraft HF, VHF and UHF antennas as well as other accessories for K5DES. As a bonus, the club station recently benefited from the generosity of Keith Pugh, W5IU, who donated an ICOM IC-706MkIIG that he'd won at the recent HamCom convention. Pugh is AMSAT-NA vice president for operations.

DeGolyer teacher Sanlyn Kent, KD5LXO, says that, so far, 14 youngsters--ranging from 10 to 12 years old and in grades 4 through 6--have become licensed. Kent, an art teacher at the school, got her Technician ticket only last fall and says she's been learning along with the kids.

The DeGolyer students plan to be active during Kid's Day this weekend from K5DES.

Kent said the school has been able to integrate ham radio into nearly all aspects of the DeGolyer curriculum, from geography and social studies to science and math. In the art classroom, youngsters have been designing their own QSL cards.

While the program was initially intended to be aimed at middle school students, Kent says she believes it works better at the elementary level. She said older youngsters often find themselves involved in too many other activities by the time they reach middle school. "One of the greatest things is that ham radio gets kids used to talking to other people," she said. "We keep finding ways every day to make it fit in."

With a group of largely Technician class operators at this point, Kent said she and the other K5DES members are looking forward to upgrading, so they can chat more readily with stations in other countries and learn more about different cultures.

Under the guidance of ARRL Vice President Kay Craigie, WT3P, the ARRL Amateur Radio Education Project will work directly with teachers who use Amateur Radio as a teaching strategy in the classroom. "The goal is to improve the quality of education for kids by providing educationally valid techniques involving Amateur Radio for teaching all sorts of subjects--science, geography, languages, speech," Craigie said. "Kids get the hobby of a lifetime and preparation for good careers--that's the ultimate goal."

For information on donating to The ARRL Amateur Radio Education Project, contact ARRL Chief Financial Officer Barry Shelley, N1VXY, 225 Main St, Newington, CT 06111; bshelley@...; 860-594-0212, to discuss details. The ARRL is a 501(c)(3) organization, and donations are tax-deductible.

==>ARRL OFFERS CLASSROOM EMERGENCY COMMS COURSE

The ARRL "Introduction to Amateur Radio Emergency Communications" on-line course (EC-001) now is available in a classroom version. Instructors and examiners are being sought.

The Level I class--the first of three emergency communications training levels offered through the ARRL Certification and Continuing Education program--already has been offered in a small-group setting in South Carolina and for a much larger group in Texas, where ARRL Public Service Specialist Steve Ewald, WV1X, and certified examiner Joe Dorn, W5VEX, led 60 people through the classroom course at Ham Com, June 9-10. The Level II (Intermediate) and Level III (Advanced) classes will be added in the future.

In-person classes may be organized and sponsored by any interested group. At least one registered and qualified certification instructor is required to teach the class. Two registered and qualified certification examiners are required to conduct the certification exam. ARRL provides course materials, exams, and answer sheets.

Those interested in becoming certification instructors or certification examiners should review the ARRL C-CE Course Administration Criteria, available on the ARRL Web site (http://www.arrl.org/cce/ccecriteria2.html). Qualified individuals may sign up on-line using the CE/CI Registration Application (http://www.arrl.org/cce/ciceapp.html).

More information on the ARRL Certification and Continuing Education (C-CE) Program is on the ARRL Web site (http://www.arrl.org/cce/faq.html) or from Certification and Continuing Education Program Coordinator Dan Miller, K3UFG, cce@....

==>OREGON YOUNGSTERS ENJOY SPACE CHAT

Youngsters at Henley Middle School in Klamath Falls, Oregon, spoke this week via Amateur Radio with astronaut Susan Helms, KC7NHZ, aboard the International Space Station. Using the NA1SS call sign, Helms answered a dozen questions from the students--several of them also amateurs--during the June 12 QSO.

The Henley Middle School schedule, bumped from last week, was handled via a telebridge with Tony Hutchison, VK5ZAI, in South Australia. In Oregon, teacher Walter Jones Jr, KC7HEX, coordinated a group of 11 youngsters in grades three through 10 from the Henley Elementary, Middle and High schools. Many of the youngsters belong to the Klamath County Schools Amateur Radio Club, KC7VWW. Jones said all 400 middle school students got to listen in via the school's public address system.

Helms told the students that the Expedition Two crew has been conducting an "unofficial experiment" growing onion plants aboard the ISS. She said the onions arrived aboard a recent Russian supply ship. The crew wrapped the vegetables in wet wash cloths and attached them to the wall of the space station where they're now sprouting, she said.

She also addressed a question about the possibility that the ISS might encounter another object in space. "There is a lot of space stuff out here,"

she said. "We just have not seen it." She speculated that most of the space debris was in a higher or lower orbit than the ISS, and it has not yet presented a problem. Helms also said that ISS crew members no longer had to suck their meals through tubes. "We actually have fairly civilized food," she said, "like you could get at the grocery store."

Jones said most of the participating students had taken a class at the middle school, "Introduction to Amateur Radio," and have earned their ham tickets. He said response to the successful contact was extremely positive. "Everybody was ecstatic," he said. "Everybody had butterflies at first, but it went off perfectly."

The Henley Middle School has a Web site, http://www.jones-clan.com/amateur_radio/Klamath_County_Schools_ARC.htm

==>GULF REGION HAMS WADE IN TO HELP IN ALLISON'S WAKE

Amateur Radio continues to support relief agencies in the wake of heavy flooding in Texas, Louisiana and parts of Mississippi. South Texas ARRL Section Manager Ray Taylor, N5NAV, said June 15 that several dozen more volunteers were needed to help provide communication support for Salvation Army, Baptist Mens' Kitchen and Red Cross relief operations.

An FCC-declared general communications emergency in Texas and Louisiana for 3873 and 7285 kHz was rescinded at 2300 UTC on June 15.

The region suffered some of the worst flooding in decades after Tropical Storm Allison moved ashore last weekend and stalled. The storm claimed more than a dozen lives.

Although the initial flooding was receding, additional rainfall this past week--and more predicted--created an uncertain situation in the region.

Taylor said hams had been using HF links between their field volunteers and their regional headquarters operations in the Dallas area to support Salvation Army and Baptist Mens' Kitchen feeding efforts in the stricken area. Cellular telephone service was made available, however. Other links were made using Amateur Radio VHF.

Hams also have been using VHF and UHF repeater nets to provide emergency communication and to coordinate relief activities on the local level, including at Red Cross shelters. Taylor said he expected hams would be needed for the next couple of weeks.

Amateur Radio volunteers with VHF capability--either an H-T with extra batteries or a mobile and portable antenna--were needed to help relief agencies with conventional and cellular systems still knocked out due to flooding. Prospective volunteers should contact Taylor via e-mail at n5nav@...; South Texas Section Emergency Coordinator Bob Ehrhardt Sr, W5ZX, w5zx@..., or Jeff Salmons, N5ECP, n5ecp@....

Radio Amateur Civil Emergency Service member Bruce Paige, KK5DO, in Houston said telephone service was lost in most of downtown area in the immediate

aftermath of the flooding. Several hospitals and the medical center also lost power and water, he said. In some cases, basement flooding prevented emergency generators from taking over.

Paige said hams provided a link between the Medical Center and local hospitals and were stationed at a triage center set up at the Houston Astrodome. He reports that hams assisted at local Houston fire stations last Saturday when the dispatch system went down. Hams helped to direct emergency calls for service to the station best-equipped to handle the call. Amateur Radio also handled health-and-welfare messages from the affected area to the outside.

Amateurs also provided vital links between the Austin Emergency Operations Center and Houston and Fort Bend EOCs after Houston and Fort Bend lost telephone service. Paige said ham radio was a communications mainstay at one point as other systems fell victim to the flooding or power outages.

In Louisiana, East Baton Rouge Parish EC Karl R. Sandstrom, K5MAN , reports that ARES and RACES were activated June 7 to assist the Red Cross in the Baton Rouge area following upwards of two feet of rain during the weekend.

The Red Cross opened shelters in Baton Rouge and Denham Springs and hams provided communication. Hams were able to stand down from duty when the Red Cross was able to re-establish its normal communication infrastructure.

"Communications Coordinator Joe Ross and the Red Cross extended their very sincere appreciation for the time and effort put forth by local ham operators helping to fill communications gaps," Sandstrom said.

Taylor said many hams in the Gulf region have volunteered to help out in the aftermath of the flooding, but he did not yet have an accurate head count.

==>NEW MEXICO ARES/RACES ACTIVATES IN WILDFIRES' WAKE

New Mexico ARES/RACES members responded earlier this month to Red Cross calls for communication assistance. The activation came after wildfires in Lincoln County caused several evacuations as they threatened Ruidoso. Hams also provided supplementary communication for the firefighting efforts.

American Red Cross official Arthur Hoopes, KD5NDK, put out the call for amateur assistance June 1 to Pat Chappelle, WA5HOK, JP Kenmore, K5FBK, and Lincoln County ARES Emergency Coordinator and RACES Officer Rick Sohl, K5RIC. Amateurs responded and worked steadily over the next four days. They set up communication between the Red Cross Office in Ruidoso, a shelter and command post, a canteen and five mobile radio units that were taking people and equipment to many areas of the fire. They also moved food and supplies to the Homestead fire suppression team.

A second fire developed the following day near the Inn of the Mountain Gods. As a precaution, commercial power was shut down, putting the Sierra Blanca Amateur Radio Club and the Buck Mountain repeaters off the air. Hams were forced to improvise. They reverted to simplex operation--just as they had rehearsed in training sessions. Sporting his brand-new K5RIC call sign

issued the same day, Sohl set up a relay station at his home. HF was used to communicate with other New Mexico ARES/RACES units and with the state EOC in Santa Fe. A secondary net was activated using a solar-powered repeater on Captain Mountain. ARES/RACES members in Rio Rancho set up a remote base to hit the Captain Mountain repeater and to keep in contact with members of the Lincoln County ARES/RACES team.

ARRL Section Manager Joe Knight, W5PDY, and New Mexico ARRL SEC and RACES Officer Bill Kauffman, K6YEJ, provided communication support and information to local ARES members.

Sohl said the extended power failure was excellent training for Amateur Radio VHF/UHF operations without the use mountaintop repeaters. "This event highlighted one of the main reasons that Amateur Radio stations can provide reliable radio communications during major disaster events," he said. "They can improvise and set up special radio networks without repeaters or commercial power and still provide local and statewide coverage."

Sohl said many of the Lincoln County ARES/RACES members who pitched in for the fire emergency had only recently become licensed and undergone emergency response training. More than a dozen amateurs assisted in the fire emergency.

==>WWV SURVEY NOW AVAILABLE ON THE WEB

The National Institute of Standards and Technology survey seeking information on how WWV and WWVH listeners use the standard time and frequency broadcast services now is available on the Web. The survey is posted at http://www.timesurvey.nist.gov/. It's also available as a printable PDF or HTML file.

The survey has been available as a hard-copy, mail-in version and promoted via WWV broadcasts. WWV Station Manager John Lowe says that more than 4000 completed surveys have been received so far by mail. "This proves the radio community is large and very active," he said.

NIST says the survey should take just a few minutes to complete. The survey deadline is September 30.

According to Lowe, the last WWV-WWVH user survey was done in 1985. He confirmed that the data collected ultimately could be used to determine whether WWV and WWVH remain on the air--especially given the popularity of NIST's other outlets, including its Web-based time server that gets in excess of 3 million hits a day. Lowe strongly encouraged WWV and WWVH users to send in a survey, but he has suggested that more weight will be given to survey responses from corporate and institutional users of the radio service than to individuals.

WWV in Ft Collins, Colorado, and WWVH on Kauai, Hawaii, broadcast continuous time and frequency information to millions of listeners worldwide. Information broadcast includes time announcements, standard time intervals, standard frequencies, UT1 time corrections, a BCD time code, geophysical

alerts, marine storm warnings, and Global Positioning System status reports.

For more information, contact John Lowe, lowe@....

==>JAN CARMAN, K5MA, JOINS ARRL HEADQUARTERS STAFF

Jan Carman, K5MA, has joined the ARRL Headquarters staff. Carman will supervise the Headquarters' Book Team. He replaces Joel Kleinman, N1BKE, who is now QST managing editor.

Carman's career has spanned the fields of aerospace, oil-field equipment, industrial control and instrumentation, underwater acoustics, communication systems, manufacturing automation and consulting.

"Jan Carman will be an outstanding addition to the ARRL publications staff," said QST Editor and ARRL Production and Editorial Department Manager Steve Ford, WB8IMY. "He brings decades of management experience and a fresh perspective."

Carman holds bachelor's and master's degrees in electrical engineering from the University of Pennsylvania. His Amateur Radio interests include contesting, DXing and VHF/UHF weak signal work. He is a member of the DXCC Honor Roll and the First Class CW Operators Club (FOC). He's also a member of the Yankee Clipper Contest Club.

==>SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: Sunspot numbers and solar flux rose this week. Average daily sunspot numbers were up nearly 75 points and average daily solar flux was up more than 26 points. The daily sunspot number peaked on Saturday at 250, dipped, and rose again to 249 on Monday. Daily sunspot numbers have not been that high since the big jump in activity around the end of March.

Disturbed days were Saturday and Sunday, when planetary A indices were 20, and the planetary K index was five over two three-hour reporting periods.

Solar flux rose to 194.7 on Thursday, but is expected to dip below 170 this weekend. Predicted planetary A index is 10 for Friday and Saturday and 15 for Sunday. On Wednesday a strong solar flare propelled a coronal mass ejection pointed away from earth. There is a possibility of more flare activity on Friday.

Sunspot numbers for May 31 through June 6 were 93, 120, 141, 143, 125, 160 and 170, with a mean of 136. The 10.7 cm flux was 132.8, 133, 134, 145.3, 153.8, 153.4 and 157.7, with a mean of 144.3. Estimated planetary A indices were 7, 11, 21, 11, 11, 9 and 10 with a mean of 11.4.

Sunspot numbers for June 7 through 13 were 163, 179, 250, 217, 249, 193 and 221, with a mean of 210.3. The 10.7 cm flux was 164.8, 180.2, 177, 163, 162.4, 166.4 and 181.4, with a mean of 170.7. Estimated planetary A indices were 12, 8, 20, 20, 10, 7 and 14 with a mean of 13.

==>IN BRIEF:

* This weekend on the radio: The All Asian DX Contest (CW) the SMIRK QSO Party, Kid's Day and the West Virginia QSO Party are the weekend of June 16-17. JUST AHEAD: ARRL Field Day, the Marconi Memorial HF Contest, and the ARCI Milliwatt Field Day are the weekend of June 23-24. The RAC Canada Day Contest is July 1. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Kid's Day is Saturday! Kid's Day is Saturday, June 16, 1800 to 2400 UTC. There's no limit on operating time. The suggested exchange is name, age, location and favorite color. Invite a youngster to operate from your shack. Participants are encouraged to work the same station again if an operator has changed. Operating details are on the ARRL Web site, http://www.arrl.org/FandES/ead/kd-rules.html.

* ARRL seeks QST technical editor: The ARRL Publications Group is seeking a full-time QST technical editor. The position is located at ARRL Headquarters in Newington, Connecticut. The QST technical editor will provide leadership to the technical Amateur Radio community by developing and promulgating a vision of the state of the Amateur Radio art through the pages of QST. Responsibilities include: soliciting and preparing QST technical material for publication; working cooperatively with authors during the development, writing, editing and production of QST technical articles; working effectively and cooperatively with other QST editors, production staff and other in-house staff; editing QST technical manuscripts for technical accuracy, grammar, style and usage; ensuring that technical manuscripts and graphics are prepared for publication in a polished and professional manner, and by deadline; evaluating QST technical manuscripts and recommending whether or not they should be accepted for publication. Qualifications include a broad knowledge of and experience with Amateur Radio and electronics; design and construction of Amateur Radio equipment, antennas and accessories; and Amateur Radio software. Applicants should possess a college degree, preferably in a technical field; a minimum of three years of writing or editing experience; demonstrated ability to work effectively and productively with a variety of people; proficiency with Microsoft Office, especially Word and Excel; and an Amateur Extra Class license. To be considered for this position, send a resume, cover letter and salary expectations to QST technical editor position, Robert Boucher, ARRL, 225 Main St, Newington, CT 06111-1494; fax 860-594-0298; rboucher@.... No telephone calls, please. ARRL is an Equal Opportunity Employer.

* QRZ.com is for sale: The QRZ.com Web site is for sale. Owner and webmaster Fred Lloyd, AA7BQ, says he wants to retire. "After eight years work on this project, I've simply decided to pursue other interests," he said. "When I started QRZ, I also became a certified flight instructor. Now I would like to spend more time teaching people how to fly." Lloyd said the Web site is being offered as a running business. For details contact Fred Lloyd, flloyd@qrz.com or visit http://www.qrz.com/qrz_sale.html .

ARRL RF Safety Committee chair named to FCC Technological Advisory Council: The FCC has re-established its Technological Advisory Council, and several Amateur Radio operators have been asked to serve as members. Among those appointed was ARRL RF Safety Committee Chairman Greg Lapin, N9GL. Technology guru Dewayne Hendricks, WA8DZP, a charter member of the TAC, was appointed to another two-year term. Also reappointed was former FCC Office of Engineering and Technology Chief Dale Hatfield, W0IFO. Hatfield, now with the University of Colorado, started the TAC while he was still with the FCC. The list of amateurs on the TAC also includes Telegen CEO Jessica L. Stevens, KF6WMY. The TAC is comprised of a broad array of well-known technologists and chaired by Robert Lucky of Telcordia. The TAC helps provide technological insights that the FCC needs to stay abreast of innovations in technology. Additional information about the Technological Advisory Council is available via the FCC's Web site, http://www.fcc.gov/.

* Ten-Tec Inc adds Doug Smith, KF6DX, to staff: Amateur Radio manufacturer Ten-Tec Inc of Sevierville, Tennessee, has announced that Doug Smith, KF6DX, will be joining the Ten-Tec engineering staff. Smith will start in his new position July 1. Previously employed by Kachina , Smith was lead designer for the Kachina 505DSP computer-controlled HF Amateur Radio transceiver. A respected author and editor, he serves as editor for the ARRL publication QEX/Communications Quarterly. He is also chairman of the ARRL Digital Voice Committee.--Ten-Tec news release

* Call issued to help with New York antenna bill: ARRL Hudson Division Director Frank Fallon, N2FF, and Atlantic Division Director Bernie Fuller, N3EFN, are asking New York amateurs in their respective divisions to express support for the Amateur Radio antenna bills pending in The Empire State. Fallon and Fuller are urging telephone calls or e-mails to three key decision-makers: Senate Majority Leader Joe Bruno of the Senate Rules Committee (518-455-3191; bruno@senate.state.ny.us); Assembly Ways and Means Chairman Herman D. Farrell Jr (518-455-5491; farrelh@...); and Assembly Speaker and Rules Committee Chairman Sheldon Silver (518-455-3791; speaker@....ny.us). The suggested message: "Please bring these bills to the floor for a vote so New York State Amateur Radio operators can continue to serve their communities, at no cost to the state, in times of communication emergencies like those now taking place during the Texas and Louisiana floods." Senate Bill S.2893B is currently in the Rules Committee. Assembly Bill A.1565B is in the Ways and Means Committee. For additional information, visit the ARRL Hudson Division Web site, http://www.arrlhudson.org.

* Hurricane Center hams honored: Amateur Radio operators at National Hurricane Center station W4EHW received the Volunteer of the Year award June 1 at the South Florida Hurricane Conference. The amateurs were recognized for 22 years of dedicated service at the National Hurricane Center, collecting weather and damage data for the NHC forecasters when tropical storms or hurricanes are within 300 miles of any land mass. Accepting the award on behalf of the many amateur volunteers were Amateur Radio Coordinator John Mc Hugh, KU4GY; Assistant Amateur Radio Coordinator Julio Ripoll, WD4JR, and volunteer operator and former Miami-Dade County RACES Officer Joel Kandel, KI4T. WD4JR and KI4T are founding members of the

station. The conference, held for the seventh year at the Broward County Convention Center in Ft Lauderdale, is sponsored by the emergency management and public safety agencies of Monroe, Miami-Dade, Broward, Palm Beach, Collier, and Lee Counties. It addresses many hurricane preparedness and response issues of particular concern to South Florida. More than 600 attended the conference luncheon and award ceremony, held propitiously on the first day of the Atlantic hurricane season.

* YU1RL takes up duties as Yugoslav ambassador to Brazil: Well-known contester and DXpeditioner Radivoje "Rasa" Lazarevic, YU1RL, has taken up his post as Yugoslav ambassador to Brazil. He arrived in Brasilia June 1. The 39-year-old Lazarevic has operated many times from Brazil and Fernando de Noronha. He says he likes Brasilia very much and hopes to be there for a long time.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections

effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

==========

==>AMATEUR MORSE TESTING CHANGES EFFECTIVE JULY 1

New Morse code exam standards go into effect Sunday, July 1, for all Volunteer Examiner Coordinators. The new standards call for Farnsworth character speed in the 13-to-15 WPM range and the end of multiple-choice questions for routine Morse code exams.

The National Conference of Volunteer Examiner Coordinators voted last July to set up the revised standards for the administration of Morse code examinations in the US after amateur restructuring established 5 WPM as the sole Amateur Radio Morse code requirement.

ARRL VEC Manager Bart Jahnke, W9JJ, points out the required change to the Farnsworth protocol replaces the 18-WPM character speed ARRL VEC has used since 1989. "Standard 5 WPM messages with 5 WPM characters are available as an accommodation," he said. "Standard (non-Farnsworth) speed messages are available upon special request from the ARRL VEC for ARRL VE teams." In addition, the Morse exam audio frequency range should be between 700 and 1000 Hz for routine exams.

Consistent with the revised standards, Jahnke said, ARRL VEC has set 15-WPM characters as its Farnsworth setting and 750 Hz as its audio-frequency standard.

Code practice transmissions from Maxim Memorial Station W1AW will reflect the new Farnsworth standard. W1AW Station Manager Joe Carcia, NJ1Q, says transmissions using the new protocol will begin Monday, July 2. "Any of our code transmissions at speeds below 18 WPM will drop from 18 WPM to 15 WPM character speed," he said. "We will maintain the standard method at speeds above 18 WPM--20 WPM at 20, 25 WPM at 25, etc."

Carcia said the W1AW Web code practice files <http://www.arrl.org/w1aw/morse.html> also will be changed to mirror the W1AW transmission protocol. ARRL's Your Introduction to Morse Code cassette tapes and audio CDs also have adopted the new standards.

The new Morse examination standards also affect test administration. After July 1, Morse examinees will have to supply fill-in-the-blank answers for the 10-question Element 1 quiz. Multiple-choice type examinations no longer will be acceptable. Under the new testing regime, Morse code examinees must either correctly answer seven of the ten fill-in-the-blank questions or correctly copy 25 consecutive characters.

==>NEVADA ARES SUPPORTS RED CROSS IN FIRE RESPONSE

As a forest fire raged out of control along the Nevada-California border this week, amateurs from both states responded to lend valuable communication support to the American Red Cross. The Red Cross Sierra Nevada Chapter provided relief services to firefighters battling the major woodland blaze southwest of Reno. Northern Nevada Amateur Radio Services--representing Washoe County Amateur Radio Emergency Service and Radio Amateur Civil Emergency Service--is coordinating the Amateur Radio effort.

The so-called Martis fire began June 18 about 20 miles west of Reno near Truckee, California--possibly the result of an improperly doused campfire that got out of control from high winds. Residents of several areas along Interstate 80 in California were briefly evacuated earlier in the week but were allowed to return home after the fire danger had subsided. At week's end, the fire covered nearly 15,000 acres and was considered 50-percent contained on the western side.

Nevada Section Emergency Coordinator Paul Cavnar, NN7B, said most of the fire is burning dense forest areas that have not burned for nearly 200 years.

Cavnar said local Amateur Radio resources have become strained as the week wore on because several volunteers were away on vacation or had full-time jobs during the daytime when the need for operators has been the greatest. Cavnar said hams from the Douglas County Amateur Radio Team (DCART) have provided "mutual assistance" operators during the day. "Most of them are traveling 50 or 60 miles," he said.

To the west of the fire in California, the California Department of Forestry set up a staging area in the Hirshdale area--not easily accessible from the east due to smoke and fire. Cavnar said he contacted Sacramento Valley (North) SEC Dave Thorne, K6SOJ, who alerted section leadership of the need for assistance from the California side of the fire. Placer County (West) EC, Wayne Mikel, KE6DJE, responded by providing operators for daytime shifts.

Efforts June 22 were concentrated on the fire's southern and eastern sides, Cavnar said. "We're all keeping our eyes on the weather. If we do get strong winds, we will go into active alert status, and all available operators will be put on standby to mobilize."

Washoe County RACES Officer and NNARS team member Russ Shively, W7LWI, said the Red Cross initially requested NNARS communication support because its radio liaison was on duty for the Texas and Louisiana floods. In light of the isolated, mountainous terrain involved, hams have made use of several repeaters. "Many of these areas were so remote, even cell phone links were inoperable," Shively said.

At one point on June 18, one of the Red Cross Emergency Response Vehicles lost its radio, and a ham with a hand-held transceiver was assigned to ride shotgun to provide communications. After an ERV broke down and lost contact and another ERV radio failed, it was decided that hams with H-Ts would ride along with all ERVs, Shively said.

==>AO-40 ORBIT SHIFT SET

With the AO-40 satellite's transponders still shut down, preparations are under way for a slight shift in orbital configuration. Ground controllers want to raise the satellite's orbit at perigee--the position nearest Earth--by about 200 km. As AO-40 approached the planned attitude, ground controllers successfully activated the arcjet--or ATOS--propellant feed system during orbit 295. According to telemetry, the ammonia heater, flow-rate controller, valves and pressure indicators seem to work appropriately.

For the "cold" test, the gas was warmed by a 120-W heater and flowed for approximately 22 minutes. Since AO-40's solar panels have not been fully deployed, no electric current was applied to the arc. Plans call for additional cold firings of the arcjet.

The next out-gassing will occur when the spacecraft reaches apogee again. It will probably last about an hour. The S2 transmitter will be turned off during the test to save power, so all telemetry will be logged in the IHU-2's memory and downloaded later. Guelzow says that if the hour-long

out-gassing works successfully, then it will be extended--possibly to as long as four hours.

AMSAT-NA President Robin Haighton, VE3FRH, has said the arcjet firings will not significantly change the apogee. He said it's hoped that a slightly higher perigee for AO-40 will eliminate the effects of what he described as "a mysterious force" that alters the satellite's attitude when it comes through perigee. One possible theory, he said, is that atmospheric expansion caused by the current sunspot cycle peak is influencing the satellite's orbit in some way.

For more information on AO-40, visit the AMSAT-DL Web site, http://www.amsat-dl.org/ or the AMSAT-NA Web site, http://www.amsat.org.--thanks to Bruce Paige, KK5DO

==>COLORADO STUDENTS INTERVIEW ASTRONAUT VIA HAM RADIO

Eight students from several schools in the Boulder, Colorado, area used ham radio to ask US astronaut Jim Voss about his experiences and activities aboard the International Space Station. The June 21 contact was arranged through the Amateur Radio on the International Space Station (ARISS) program.

Participants ranged from elementary school age through college, including one questioner who attends the University of Colorado in Boulder, Voss' alma mater. The students gathered at the home station of Bill McCaa, K0RZ, in Boulder for the linkup, which lasted just over 10 minutes.

Students' curiosity ran the gamut from scientific to spiritual. One high schooler asked about how the lack of gravity affected Voss' sensation of balance.

"Actually, the fluids of your inner ear do change a little bit, but after a day or so, you're used to it--your eyes take over and you don't really feel like you're off balance or anything like that," Voss replied. Voss said the body adapts very quickly to space, "and you feel like you're right at home, whether you're upside down or right side up."

Another youngster asked Voss if being aboard the International Space Station made him "feel any closer to any heavenly body." Voss pointed out that the ISS was only a couple of hundred miles or so above Earth and that the view of the heavens wasn't that much different than from the ground. "I just feel further away from Earth," he said.

Voss told the students that he and his crewmates still can see the stars and planets, but they don't twinkle as they do on Earth because of the lack of atmosphere. More spectacular, he said, is the view of Earth from the ISS. "It is truly beautiful!" Voss exclaimed. Seeing Earth from space for the first time was "a very emotional experience," he said.

He said the crew has been working to get the Canadian-built manipulator arm working properly and would be involved next month in the installation of a module that will serve as a launch platform for space walks.

Voss used the NA1SS call sign for the contact. Each student got to ask two questions. Questioners included at least two hams, 17-year-old Brian Bowman, KC0FSO, and 12-year-old Emily Arthur, KC0GIA.

Voss said he hoped to make it back to Boulder for an in-person visit after he returns to Earth. The Expedition 2 crew of Voss, Susan Helms, KC7NHZ, and Yuri Usachev, RW3FU, is scheduled to leave the ISS in mid-August.

==>FCC ORDERS TWO AMATEURS OFF MOST REPEATERS

Never say that FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth lacks creative flair in applying enforcement sanctions. Acting in two ongoing cases, Hollingsworth this month notified two Technician licensees that they must stay off all repeaters on the 144, 222, and 440-MHz bands for the next three years.

Hollingsworth invoked Section 97.27 of the FCC's Amateur Service rules to modify the licenses of Ted R. Sorensen III, KC6PQW, of Agoura Hills, California, and Joseph Mattern, KG4NGG, of Orlando, Florida. Both licensees have been the subject of repeater-related enforcement inquiries.

Sorensen's restriction was among other actions recently taken in conjunction with the Los Angeles-area W6NUT repeater. In February, the FCC asked Sorensen and Gregory S. Cook, ex-KC6USO, of Chico, California, to respond to allegations that they conspired in making late-night one-way transmissions on W6NUT that originated from Sorensen's station.

In March the FCC accepted Cook's voluntarily surrendered license. For his part, Sorensen, who did not dispute the allegations, wrote the FCC offering to accept a year's banishment from the W6NUT 147.435 repeater "as fair punishment." Instead, the Commission imposed a ban on the use of all repeaters on the three most popular repeater bands for the next three years.

Mattern, who formerly held the vanity call sign WW4WJD as a Tech Plus, was called for retesting last September after the FCC received allegations that the licensee had been using amateur repeaters in his area to solicit traffic reports for his employer, a company that markets the reports. In a reply to the FCC, Mattern characterized his traffic-reporting activities as "a hobby" that earned him very little money. He also agreed to abide by the wishes of repeater control operators who had asked him to stay off their machines.

Mattern failed all elements of last year's retest, but he passed the Technician exam earlier this year, and was granted KG4NGG on May 3. In reaction to numerous additional complaints from Central Florida amateurs the FCC set aside that license grant until the Enforcement Bureau could investigate. Mattern's application was granted on June 8 with the repeater restriction imposed.

==>ROUND-THE-WORLD HAM-SAILOR SETS NOVEMBER RETURN DATE

Ham-sailor David Clark, KB6TAM, plans to sit out the Atlantic hurricane season and complete his round-the-world sail this fall. Clark left Brazil June 10 and expects to make Trinidad around June 25. There he plans to rest and wait out the hurricane season before resuming his adventure. He now says

he'll arrive in Fort Lauderdale, Florida, on his wife's birthday, November 18.

Clark, 77, is seeking to be the oldest solo circumnavigator on record. Lynda Clark has been in regular contact with her husband via Amateur Radio phone patches. This week, however, Clark reported his radio was not working when he called his wife during a refueling stop in French Guiana.

Clark survived a disaster in February that sank his original sailboat, the Mollie Milar. His beloved canine companion Mickey was lost during the rescue efforts.

Clark gets support from corporate sponsors, but he has funded much of the trip through Social Security earnings and occasional clarinet gigs. For more information on Clark's journey, visit http://www.dclark.com and http://www.captainclark.com.--Archie McKay, K4GA

==>REGISTRATION OPENS FOR ARRL ON-LINE LEVEL II EMERGENCY COMMUNICATIONS COURSE

Registration for the ARRL Level II--Intermediate Amateur Radio Emergency Communications Course (EC-002) will open Monday, June 25, at 4 PM EDT. The on-line class will begin the following week.

For those with previous experience and for anyone who took the Level I course (EC-001) the Level II course will enhance your skill and knowledge by providing a more in-depth look at emergency communications. Among the many topics covered are: Working With Volunteers, Human Resource Aspects for NCS, Net Manager Duties and Qualifications, Mutual Assistance and the ARESMAT Concept, FCC Emergency Frequency Declarations, Handling Hazardous Material Incidents, and National Disaster Medical System Emergency Communications.

If you found Level I--Introduction to Amateur Radio Emergency Communications an interesting and educational experience, you will certainly appreciate the Level II course even more.

The registration fee is $40 for ARRL members and $70 for non-ARRL members. To enroll, visit the ARRL Course Registration Page, https://www.arrl.org/forms/cce after 4 PM Monday, June 25. ARRL course welcome letters will be sent later in the week once mentors have been assigned to each student. Access codes will be sent the following week, so that all students can begin the program.

==>MARK SIMCIK, WA1VVB, JOINS HQ STAFF

Mark Simcik, WA1VVB, of Bloomfield, Connecticut, has joined the ARRL Headquarters staff. He will work in the Electronic Publications Branch as a Web applications programmer.

"Mark will be a strong addition to our group," said Electronic Publications Branch Manager Jon Bloom, KE3Z.

Simcik's career has been in the field of embedded software engineering and transaction processing. He's a University of Connecticut graduate with a degree cognitive science--an interdisciplinary degree in computer science, linguistics and psychology.

Simcik recently upgraded to General class and now serves as the president of the Bloomfield Amateur Radio Club. He is an ARRL Life Member.

==>SOLAR UPDATE

Heliophile Tad Cook, K7VVV, Seattle, Washington, reports: All solar indicators rose this week. New sunspots emerged, and the average daily sunspot number for this week rose over 43 points. Average solar flux was up 32 points. 289 was the sunspot number on Sunday, the highest since April 1, when it was 320.

A strong interplanetary shock wave struck Earth on Monday, beginning its journey last Friday from a coronal mass ejection. The ejection was not aimed toward Earth, but as it expanded through the gaseous interplanetary medium it created a shock wave that affected Earth's magnetosphere. The result was a planetary A index on Monday of 34.

Solar flux for Friday through Monday is expected to be 205, 205, 200 and 195. Geomagnetic conditions should be fairly stable, with a predicted planetary A index of 10, 10, 10 and 12 for the same days.

Sunspot numbers for June 14 through 20 were 273, 264, 276, 289, 220, 222 and 232 with a mean of 253.7. 10.7 cm flux was 194.7, 196.9, 207.6, 204.6, 221.3, 195.4 and 198.5, with a mean of 202.7, and estimated planetary A indices were 9, 12, 7, 9, 34, 14 and 15 with a mean of 14.3.

==>IN BRIEF:

* This weekend on the radio: ARRL Field Day (see May QST, page 112), the Marconi Memorial HF Contest, and the ARCI Milliwatt Field Day are the weekend of June 23-24. The RAC Canada Day Contest is July 1. JUST AHEAD: The Michigan QRP July 4th CW Sprint is July 4-5; IARU HF World Championship is July 14-15. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* ARRL Headquarters seeks teacher: The ARRL is seeking a state-certified teacher/educator with classroom experience to serve as the coordinator of the ARRL Amateur Radio Education Project ("The Big Project"). Candidates should hold a current Amateur Radio license, have several years of teaching experience at the middle/junior high school-level, have excellent communication, computer and interpersonal skills and be involved in a wide range of amateur activities. The position is at ARRL Headquarters in Newington, Connecticut. Send resume and salary expectations to Education Project Coordinator, Bob Boucher, ARRL, 225 Main St, Newington, CT 06111; fax 860-594-0298; rboucher@.... For more information, contact Rosalie White, K1STO, rwhite@..., 860-594-0237. The ARRL is an equal opportunity employer.

* West Texas getting new Section Manager: Lee Kitchens, N5YBW, of Ransom Canyon, Texas, has been appointed West Texas Section Manager, effective July 1. He succeeds Clay Emert, K5TRW, who stepped down for health reasons. Emert had been appointed SM last January and was recently elected to a two-year term. He also has served as an assistant section manager and assistant director. Kitchens is a retired electrical engineer. An ARRL member even before he got his license, he's been a ham for 10 years and holds a Tech Plus ticket.--Rosalie White, K1STO

* Ham radio-carrying balloon launch set: Four high-altitude balloons carrying Amateur Radio gear will be launched from Manhattan, Kansas, the weekend of June 30-July 1. Participants in "Great Plains Super Launch 2001" are preparing payloads supporting 2-meter APRS navigation and telemetry via packet radio, a 70-cm simplex voice repeater, 70-cm and 13-cm ATV, 2-meter SSTV, science experiments and film cameras. Amateur Radio operators within 350 miles of northeastern Kansas are encouraged to participate in all communications modes. More information is available at the Great Plains High Altitude Balloons site, http://users.crosspaths.net/~wallio/gpsl2001.html .--Ralph Wallio, W0RPK

* AMSAT-NA announces nominations for directors: AMSAT-NA has announced the slate of candidates for the four seats available on the AMSAT-NA Board of Directors. They are Barry Baines, WD4ASW; Dick Daniels, W4PUJ; Robin Haighton, VE3FRH; Bill Tynan, W3XO; Richard Hambly, W2GPS and Bruce Paige, KK5DO. Bains, Daniels, Haighton and Tynan are incumbents. Ballots will be mailed by July 15.

* GM creates Web link to aid mobile installations: In response to a request from ARRL, the General Motors Engineering Center has created a Web link to its official guidelines for installing radio transmitters in vehicles. The Radio Telephone / Mobile Radio Installation Guidelines page is http://service.gm.com/techlineinfo/radio.html. Installation guidelines for Chrysler and Ford are reprinted, with permission, in the ARRL RFI Book, http://www.arrl.org/catalog/6834 . ARRL offers additional information about automotive RFI on its Web site, http://www.arrl.org/tis/info/rficar.html.

* Hams assist US Navy flight: Participants on the 20-meter Maritime Mobile Net June 13 were a bit surprised when a ham aboard a US Navy plane checked in for assistance. John Pierce, KC4YWP, informed the Net that the Navy aircraft--using the military call sign "Copperhead 5"--had lost communication with its base. "He asked us to place a telephone call to his base to inform them he was returning due to loss of communications," said Bob Puharic of Pennsylvania--one of the net controllers. Puharic said that retired US Air Force Col Bob Botik, K5SIV, placed the call and informed Copperhead 5 that it had been delivered. "The US Navy thanked the net and secured," Puharic said.

* QRZ.com is for sale: The QRZ.com Web site is for sale. Owner and webmaster Fred Lloyd, AA7BQ, says he wants to retire. "After eight years work on this project, I've simply decided to pursue other interests," he said. "When I started QRZ, I also became a certified flight instructor. Now I would like to spend more time teaching people how to fly." Lloyd said the Web site is

being offered as a running business. For details e-mail Fred Lloyd, flloyd@... or see http://www.qrz.com/qrz_sale.html .

* QSL card postage jumps a penny on July 1: It will cost another penny to mail a QSL card (postcard) after July 1. The US Postal Service announced in January that it would raise the postcard rate by one cent--to 21 cents. The complete postal rate schedule is available on the USPS Web site, http://www.usps.com/ .

* Space tourist Tito expresses appreciation to ARISS: Dennis Tito, KG6FZX, the first so-called "space tourist" has written a letter of thanks to the Amateur Radio on the International Space Station (ARISS) International Team. "Now that I have returned to Earth and found my footing after nearly a week of weightlessness, I wanted to write to you to extend my personal gratitude for your assistance while I was aboard the International Space Station," Tito said. "Your help made it possible for me to share my deep feelings of joy and fulfillment. I thank you very much for making my space flight so much more meaningful for my family and me."--ANS

* Vote on QST Cover Plaque Award: The winners of the QST Cover Plaque Award for June were Wes Hayward, W7ZOI, and Bob Larkin, W7PUA, for their article "Simple RF-Power Measurement." Congratulations. The winner of the QST Cover Plaque award--given to the author of the best article in each issue--is determined by a vote of ARRL members. Voting takes place each month on the Cover Plaque Poll Web page, http://www.arrl.org/members-only/qstvote.html. As soon as your copy arrives, cast a ballot for your favorite article in the July issue of QST. Voting ends July 15.

* ARRL-Affiliated Club database now available to all: Each year thousands of people contact ARRL asking for information on Amateur Radio. Prospective hams may want to know if there is a nearby ARRL-affiliated club that holds licensing classes. Licensees may be looking for a club that offers assistance in a specialty area. The ARRL maintains a Web site, http://www.arrl.org/FandES/field/club/clubsearch.phtml, that permits searches by state, ARRL section, ZIP code and club name or call sign. Club officials may update their clubs' information via a special site, http://www.arrl.org/FandES/field/club/forms/fsd2/. As a security measure, clubs that are inactive or have not contacted ARRL within two years may not change any data. The site http://www.arrl.org/FandES/field/club/biglist.html is available for all clubs to input data, and it's checked daily. Once verified, the data are transferred to the current database.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; http://www.arrl.org. Jim Haynie, W5JBP, President

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb at http://www.arrl.org for the latest news, updated as it happens. The ARRLWeb Extra at

http://www.arrl.org/members-only/extra offers ARRL members access to informative features and columns.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

260. Hello, I have shifted

The ARRL Letter
Vol. 20, No. 26
June 29, 2001
***************

IN THIS EDITION:

* +ARRL asks members' opinions on Novice band refarming
* +KC7NHZ conducts first Field Day operation from space
* +FCC fines, revokes ham, GMRS tickets of reputed radio pirate
* +Hams stand down as forest fire is contained
* +No more Mr "NOCALL" on ISS
* +W1AW seeks signal reports on 80
* Ham radio praised at disaster communications conference
* Solar Update
* IN BRIEF:
This weekend on the radio
Beat the clock! Special ARRL membership rates expire June 30
+Dayton attendance down slightly
+DXCC announces 12 meter DXCC
NCVEC sets July meeting schedule
California club to operate as W1AW/6 during IARU HF World Championship
RAC announces Morse code proficiency certificate
Vera M. Tallman, K4ICA, SK

============================================================

==>SURVEY SEEKS INPUT ON NOVICE/TECH PLUS HF SPECTRUM

The ARRL Novice Spectrum Study Committee is soliciting input from the
amateur community on possible ways to optimize use of the present Novice and
Technician Plus allocations on 80, 40, 15 and 10 meters. Survey results
might form the basis for the ARRL to approach the FCC and request changes in
the ways amateurs may operate within HF bands that contain Novice subbands.

The Novice Spectrum Study survey is available to ARRL members on the Web
<http://www.arrl.org/members-only/NoviceSurvey.html>. Members will be able
to complete and submit the survey only once. Nonmembers are invited to
e-mail comments and suggestions to novicesurvey@... .

The committee--chaired by ARRL International Affairs Vice President Rod
Stafford, W6ROD--has been examining the status and usage of the present
Novice HF bands with an eye toward determining what changes might be needed
now that the FCC no longer issues new Novice licenses. The survey offers
```

members a chance to express opinions and preferences on various options--including leaving things as they are. Respondents are invited to add comments and suggestions before submitting the survey.

Some 40,000 Novice licensees remain in the current FCC database, and that number is dropping by some 6000 licensees each year through attrition and upgrading.

The Novice Spectrum panel will present an interim report at the July ARRL Board meeting, and a final report at the annual meeting next January.

==>SUSAN HELMS, KC7NHZ, THRILLS FIELD DAY OPS FROM ISS

Astronaut Susan Helms, KC7NHZ, took time out aboard the International Space Station to join in the ARRL Field Day fray last weekend. The operation was believed to mark the first time anyone participated in Field Day from space.

Helms worked several dozen stations--most of them Field Day operations--as the ISS passed over the US. ARRL Contest Branch Manager Dan Henderson, N1ND, says the NA1SS contacts will count for Field Day credit, but they will not count for satellite bonus points.

Helms sounded like a veteran contester during Field Day, although not without some confusion as to what exchange she should transmit. Initially acting on incorrect information, Helms was giving out "one alpha maritime mobile-Russia" for a Field Day report. Later, she resorted to "1 alpha battery on the space station."

The NA1SS Field Day operation infused a lot of enthusiasm into the occasion. "This Field Day is the one I'll remember the most, even after doing FD for 40 years," said ARRL Wisconsin Public Information Coordinator Jim Romelfanger, K9ZZ. Romelfanger worked NA1SS as part of the WB9FDZ Yellow Thunder Amateur Radio Club Field Day crew. "Susan was having a ball up there!" he said.

Dave Swartz, KC7RRH, said his club's Field Day operation was another lucky enough to snag a contact with NA1SS. It happened almost by accident. Swartz, who operated with the Federal Way Amateur Radio Club's WA7FW setup in Washington, said the group was set up for a packet contact via the ISS when he heard Helms' voice coming over the speaker. Although he was on 20 meters at the time, he grabbed the mike at the packet setup next to him and made the QSO. Swartz said he was "very psyched" about working Helms but disappointed not to get the bonus points.

Henderson said that ISS contacts will not count for bonus points because the ISS is not an "Amateur Radio satellite," as rule 7.3.7 specifies <http://www.arrl.org/contests/announcements/rules-fd.html>. Henderson said that, because of their nature, bonus points "need to be readily available to everybody," and the ISS offers only a limited window of opportunity.

As for the correct Field Day operating class for NA1SS, Henderson said there is more than one possible choice, but the question is largely academic. "Whatever exchange she sent out, count it as a valid contact for Field Day

and enjoy the experience," he said. Field Day entries require a list of call signs worked by band and mode.

Henderson said Helms' ISS Field Day entry will end up "in a class by itself."

US stations working NA1SS aboard the International Space Station QSL to Margie Bourgoin, KB1DCO, ARRL, 225 Main St, Newington, CT 06111. Canadian stations QSL to Radio Amateurs of Canada, 720 Belfast Rd--Suite 217, Ottawa, ON K1G 0Z5. A self-addressed, stamped envelope is required to get a QSL in return.

==>FCC REVOKES HAM TICKET OF ALLEGED RADIO PIRATE, ISSUES FINE

The FCC has revoked the Amateur and General Mobile Radio Service licenses of reputed pirate broadcaster Leslie D. "Doug" Brewer of Tampa, Florida, and fined him $11,000 for "willful and repeated violation" of the Communications Act. Brewer already owes the US government $11,000 in forfeitures assessed previously for similar violations.

"Operating unlicensed radio facilities in deliberate and brazen defiance of our rules cannot and will not be tolerated," the FCC said in its Order of Revocation and of Forfeiture, released June 26. The FCC said that based on its considerable evidence, Brewer "lacks the basic character qualifications to be and remain a Commission licensee." The Order contained a footnoted reference to the case of Herbert L. Schoenbohm, ex-KV4FZ, who lost his Amateur Radio license on the basis of character issues.

The FCC said Brewer failed to file any notice of appearance at the revocation proceeding. As a result, the presiding judge waived hearing, and the FCC made its determination in the case based on the information it had before it.

Earlier this year, the FCC suspended Brewer's General ticket, KC4HAZ, for the rest of its term while it initiated revocation proceedings. Brewer also held the GMRS call sign KAE1170. He has 30 days to file a petition for reconsideration of the FCC's Order. Otherwise, he has 30 days to pay the fine. The revocations are to take effect 40 days from the release of the Order.

Brewer, 46, runs a two-way radio and electronics shop. He's the trustee of several Amateur Radio repeaters in Tampa and is well-known within the Tampa amateur community.

FCC and other sources say Brewer operated "The Party Pirate" on 102.1 MHz from his home. He was among those caught up in a November 1997 sweep by federal agents to shut down unlicensed broadcasting operations in Tampa.

The FCC said Brewer "continues to display a cavalier disregard toward his licensee obligations . . . notwithstanding clear and repeated notice that his behavior was unlawful." The $11,000 forfeiture was the maximum the FCC could have imposed in the case. The government is continuing its efforts to collect the $11,000 in forfeitures already assessed against Brewer.

The FCC Order in the Brewer case is available on the FCC Web site <http://hraunfoss.fcc.gov:8835/edocs_public/attachmatch/DA-01-1489A1.doc> .

==>NEVADA ARES/RACES WRAPS UP FIRE RESPONSE

With a forest fire along the Nevada-California border now largely contained, Amateur Radio support to the Red Cross relief effort has concluded. Amateur Radio Emergency Service District 1 Emergency Coordinator Matt Parker, N7TOD, said communication support efforts wrapped up June 24.

"Amateurs remain on standby should additional communication support be needed," Parker said this week. "However, at this point, it does not appear that any further assistance will be needed with this incident." He said hams also have volunteered to assist the Red Cross to rectify operational problems that cropped up with the agency's 47-MHz radio system during the incident response.

The Red Cross Sierra Nevada Chapter provided relief services to firefighters battling the major woodland blaze southwest of Reno. Northern Nevada Amateur Radio Services--representing Washoe County ARES and Radio Amateur Civil Emergency Service--coordinated the Amateur Radio effort.

On a couple of occasions, radios aboard Red Cross Emergency Response Vehicles failed. As a result, H-T-equipped ham radio operators were designated to ride shotgun on all ERVs. As of week's end, the Red Cross had released some or all of its ERVs to return to their home bases.

The so-called Martis Fire began June 18 about 20 miles west of Reno--possibly the result of an improperly doused campfire that was blown out of control. Eventually, it consumed some 14,500 acres. Residents of several areas along Interstate 80 in California were briefly evacuated.

Last weekend, some feared that gusty winds might further spread the flames, but that did not happen. Parker said cooler temperatures and some rainfall earlier this week helped alleviate the situation.

Firefighters remaining on duty this week were "mopping up the hot spots," said Nevada Section Emergency Coordinator Paul Cavnar, NN7B. He reports one mobile home and three vehicles fell victim to the flames, but no one was hurt or killed.

"It has been a good learning experience for us and did expose some weaknesses that we will be addressing very soon," Cavnar said. "We actually had a few hams volunteer from other states to come in and assist as needed. Now, that's what I call solid commitment!"

==>NEW PACKET TNC ON THE WAY TO ISS

Amateur Radio on the International Space Station Board Chairman Frank Bauer, KA3HDO, says the ARISS-US team has delivered a new packet module to NASA. "This new packet module is expected to correct several of the problems that have been observed on the current ARISS packet system," he said.

The module is expected to undergo a "bench review"--or inspection--in the near future by one of the US astronauts. It is scheduled to fly to the ISS on shuttle mission STS-105, currently planned for launch in early August.

Bauer says Expedition 3 Crew Commander Frank Culbertson, KD5OPQ, plans to make the packet module changeout early in his ISS tour of duty. Culbertson will be joined aboard the ISS in mid-August by Russian cosmonauts Mikhail Turin and Vladimir Dezhurov.

Bauer says all pertinent TNC parameters are embedded in the PROM, so the packet module should be fully functional even with a dead battery. It's believed the current TNC lost its backup battery. As a result it displays <NOCALL> as a call sign. Stations cannot connect but have been able to digipeat through the system, however. The new TNC will display the Russian call sign RS0ISS. The Personal Mailbox System (PMS) uses the call sign RS0ISS-1.

==>W1AW SEEKS 80-METER SIGNAL REPORTS

Maxim Memorial Station W1AW has changed its 80-meter bulletin antenna system and requests signal reports from those monitoring the 80-meter transmissions. An 80-meter "cage" dipole joined the W1AW antenna farm in May. W1AW Station Manager Joe Carcia, NJ1Q, says the new dipole is oriented to radiate east-west. The "cage" complements a coaxial dipole that's been in use for several years.

Field Day marked the first official test of the new 80-meter cage. Previously, RFI problems with the alarm system had prevented general use of the new skywire. Carcia and Building Manager Greg Kwasowski, KB1GJF, solved the RFI problem by installing a number of ferrite cores on the unshielded wires entering the alarm box from the various smoke heads. "The wire installers failed to take into account that the alarm system is located in a high RF-environment," Carcia said.

Signal reports received during Field Day indicated the 80-meter "cage" antenna appears to be functioning quite well. W1AW put 512 QSOs into its Field Day log on 80, 40, 20, 15, 10 and 6 meters, using CW, SSB and RTTY--for a claimed score of 1366.

Reports on W1AW's 80-meter signal should note your location, time of reception, mode, signal strength and quality. Use of the standard R-S-T system is acceptable. Mail reports on a postcard to W1AW 80-meter reports, 225 Main St, Newington, CT, 06111. E-mail reports may be sent to w1aw@.... The complete W1AW Operating Schedule appears in July QST, page 105, and on the Web, http://www.arrl.org/w1aw.html.

==>DISASTER COMMUNICATIONS CONFERENCE PRAISES HAM RADIO

Amateur Radio's role in emergency communication received high praise in an opinion adopted by the recent Second Tampere Conference on Disaster Communication. Several speakers at the conference, held in late May in Tampere, Finland, also lauded the work of amateurs in the wake of disasters.

An Opinion of the Conference expressed appreciation for "the role played by volunteers, in particular those of the Amateur Radio Service," and encouraged administrations to facilitate their work in emergency telecommunications.

In the role of International Amateur Radio Union expert consultant, ARRL Technical Relations Manager Paul Rinaldo, W4RI, spoke at the conference on Amateur Radio and disaster communications. Approximately 125 attended the conference, including what Rinaldo called, "a notable percentage of radio amateurs" representing agencies or companies from several nations.

The conference Opinion also invited administrations to consider "the recognized need of disaster relief organizations to use their existing radiocommunication equipment under disaster relief situations" as well as "the need to conclude frequency arrangements" for such equipment in emergencies.

The conference--sponsored by the United Nations Office for the Coordination of Humanitarian Affairs and the International Institute of Communications--was organized to raise visibility of the 1998 Tampere Convention <http://www.arrl.org/news/stories/1998/12/02/1/> and to urge its ratification. The US is not yet among the nine countries that have ratified the Convention. Tampere II also provided a forum for administrations and nongovernmental organizations to exchange information about disaster communications.

==>SOLAR UPDATE

Propagation prognosticator Tad Cook, K7VVV, Seattle, Washington, reports: Conditions were good over Field Day weekend, with no big geomagnetic upsets. Forty meters was probably the best all-around band for Field Day contacts.

Sunspots and solar flux have been high recently, but both currently are declining. Average sunspot numbers dropped more than 48 points from last week, and average solar flux was off by nearly 17 points. Currently geomagnetic conditions are very quiet, and are expected to remain that way over the next week.

Single digit planetary A indices are forecast until after July 4. Solar flux is expected to decline over the next few days, to 130 on Saturday, Sunday and Monday. Flux is expected to rise to 160 by July 6 and 190 by July 11.

Sunspot numbers for June 21 through 27 were 212, 203, 228, 212, 220, 177 and 185, with a mean of 205.3. The 10.7-cm flux was 200.3, 203.6 206.2, 194.8, 182.4, 167.9 and 147.9, with a mean of 186.2. Estimated planetary A indices were 13, 7, 8, 10, 8, 13 and 10 with a mean of 9.9.

==>IN BRIEF:

* This weekend on the radio: See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Beat the clock! Special ARRL membership rates expire June 30: A few hours remain to take advantage of special ARRL membership rates before new dues rates take effect July 1, 2001! Current or prospective ARRL members in the US and US possessions may qualify by Saturday, June 30, for the special five-year renewal rate: $146 ($122 for those 65 or older). Complete your renewal or new application online <http://www.arrl.org/join.html>. Members also may opt to lock-in an ARRL Life Membership at current rates. To beat the dues increase, Life Membership Applications must be completed, signed, and FAXed (860-594-0303 or 860-594-0259) to ARRL by Saturday, June 30. A downloadable PDF Life Member application is available <http://www.arrl.org/lmember.pdf>. On July 1, ARRL full membership dues increase to $39 per year for individuals ($34 per year for those 65 and older). Due to postal considerations, we cannot extend the special five-year discount plan to those living outside the US. Special discounts apply to family, youth and visually impaired applicants. A complete rate schedule and application form is available on ARRLWeb <http://www.arrl.org/join.html>.

* Dayton attendance down slightly: Dayton Hamvention General Chairman Jim Graver, KB8PSO, reports the official attendance at the 2001 Dayton Hamvention--the 50th event--was 26,151, down roughly 9% from last year's 28,804. Hamvention attendance peaked at 33,669 in 1993, before the change in date from April to May in 1996. Graver blamed rainy weather on the opening day of the event and high gasoline prices for the attendance drop. Graver also will chair next year's Dayton Hamvention.

* DXCC announces 12 meter DXCC: The ARRL DXCC Desk has announced the addition of the 12-Meter Single Band DXCC. Applications will be accepted starting July 2, 2001. The 12-Meter DXCC certificates will be dated but not numbered. Twelve-meter credits will not count toward the DeSoto Cup competition until October 1, 2001, but they will be included in the DXCC Challenge totals. DXCC records as Adobe PDF files may be ordered via e-mail to dxcc@... . The 12-meter band was added to the printout on January 1, 2001, and DXCC records ordered since then contain 12-meter credits. Hard copies also are available from DXCC, 225 Main St, Newington, CT 06111. Include $2 for postage and handling. For more information, contact the DXCC Desk at dxcc@....--DXCC Desk

* NCVEC sets July meeting schedule: The National Conference of Volunteer Examiner Coordinators holds its annual VEC conference July 27 and 28 in Gettysburg, Pennsylvania. Among items on the agenda is discussion of the impact of Amateur Radio license restructuring on the amateur population and the topic of testing in sparsely populated areas, such as Alaska. Representatives from at 12 of the 14 Volunteer Examiner Coordinators in the US have indicated they'll attend. Bill Cross, W3TN, of the FCC Wireless Telecommunications Bureau staff is expected to be on hand to present the Commission's perspectives and to answer questions from VECs. Riley Hollingsworth, K4ZDH, of the FCC's Enforcement Bureau also will be at the meeting. Attending on behalf of ARRL will be ARRL VEC Manager Bart Jahnke, W9JJ, and Vice President Kay Craigie, WT3P. The NCVEC also will elect its board and officers during the conference.

* California club to operate as W1AW/6 during IARU HF World Championship: ARRL has authorized the Northern California Contest Club to use the famous W1AW call sign for the IARU HF World Championship. For 24 hours on the weekend of July 14-15, NCCC operators will make W1AW/6 available to the world and attempt to top the IARU HQ competition category in this event. (The DARC's DA0HQ made nearly 20,000 QSOs in last year's running and is the current champion and record holder.) W1AW/6 will be active on 160-10 meters, SSB and CW. A certificate will be awarded to each station completing a QSO on 10 of the possible 12 band-modes, and an endorsement is available for working all 12 band-modes. Look for W1AW/6 near these frequencies: CW, 1818, 1833, 3508, 3538, 7008, 7038, 14,038, 21,038 and 28,038 kHz; SSB, 1848, 3738, 3898, 7158, 7238, 14,158, 14,238, 21,338 and 28,338 kHz. Details on the awards and the operation will be available in the July NCCC club report on the Northern California Contest Club Web Site, <http://www.nccc.cc/>. Contest rules are available on the ARRL Web site, <http://www.arrl.org/contests/announcements/rules-iaru.html> and in April 2001 QST, p 111.--Ken Keeler, N6RO/NCCC

* RAC announces Morse code proficiency certificate: Radio Amateurs of Canada now offers a Certificate of Proficiency in Morse Code, for speeds of 12, 15, 20, 25, 30, 35, and 40 WPM. A certificate, also available in the French language, will be issued for each qualification. The $5 charge covers printing, handling and postage. Industry Canada RIC-1 standards will be used. Accredited Examiners also may certify candidates who produce an original Advanced Amateur, First Class or Second Class Commercial, or military Morse Code qualification certificate issued by the Canadian government. For more details, see the RAC Web site Morse program page, http://www.rac.ca/morseprog.htm.--RAC

* Vera M. Tallman, K4ICA, SK: Vera Mayree Tallman, K4ICA, of Mt Pleasant, Tennessee, died June 19, 2001. She was 99. Tallman was founder and past president of YL International SSBers (http://www.qsl.net/yl-issb/). She also was a nurse and one of the first airline stewardesses for American Airlines in Little Rock, Arkansas. A service was held June 23 in Mt Pleasant. Her son and a sister are among her survivors.--thanks to Bob Brown, KS4TD; The Daily Herald

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

262. Happy Birthday - VU2VPQ

Hi to all my ham friends,

Belated birthday wishes to VPQ

Reminding Jayprakash for the receipt .

265. Monthly Meeting

Yahoo group: m_a_r_s
Date: 2001-07-05 14:50:28 UTC
From: vu2nlf@bol.net.in
Topic: 191 Message: 265

dear Members,

The monthly meeting for July 2001 shall be held on 8th July 2001
at 10:00 am at Shishu Vihar School, Opp King George School, Dadar(E).
All members are requested to attend the same.

All members who have not paid their membership fees for 2001-2002 are
requested to bring their fees along with them.

A Another Scrammble Team (Simulated Disaster Communication Exercise)
will be held on 21/22 July 2001 (sat/Sun). Priliminary Briefing will
be conducted along with the Monthly Meeting. (Hint: This exercise
will be mostly digital and working Satellites) Interesting..!!!

73s
NLF.

==>AMATEUR LF SIGNAL SPANS THE PACIFIC!

A signal transmitted on 184 kHz from ZL6QH--the Wellington, New Zealand,
Amateur Radio Club's Quartz Hill station--has spanned the Pacific. The
transmission, part of a series of announced transpacific tests, was received
on June 30 by Steve McDonald, VE7SL, of British Columbia, Canada.

"A claim is made for the confirmed reception of ZL6QH by VE7SL, on 184.4
kHz, over a path of 11,709 km," said Bob Vernall ZL2CA, who organized the
transpacific tests. "This is a one-way confirmation, as VE7SL does not have
transmitting capability." Vernall said that on June 30, seven New Zealand
stations--including ZL6QH--and one Australian transmitted test signals in
the 160-190 kHz band for the transpacific tests. Amateurs in New Zealand
have access to that band.
```

Reception of weak LF signals typically is done using spectrographic software. McDonald used Argo software to capture the ZL6QH signal and very likely that of ZL4OL, although no claim was being made for the latter. The reception occurred right around the time of sunrise in British Columbia.

ZL6QH was transmitting dual-frequency CW with two-minute elements, one frequency representing dits, the other dahs. The ZL6QH station was running approximately 100 W into a longwire antenna.

Amateurs spanned the Atlantic in both directions earlier this year on 136 kHz. Efforts to make it across the Pacific on LF have been under way during the winter season in the Southern Hemisphere.

The ARRL has petitioned the FCC to authorize Amateur Radio allocations at 136 kHz and in the 160-190 kHz band. The petition is pending.

==>ASTRONAUT GREETS PARENTS DURING NEW MEXICO ARISS QSO

Astronaut Susan Helms, KC7NHZ, briefly greeted her parents via Amateur Radio June 27 before answering questions posed by youngsters visiting the New Mexico Museum of Natural History and Science in Albuquerque. The contact was arranged at Helms' request by the Amateur Radio on the International Space Station--or ARISS--program.

"Hi, Mom, hi Dad!" Helms said to her parents, before turning to the youngsters' questions. Patrick and Doris Helms live in Albuquerque and serve as volunteers at the museum.

It took several calls to raise Helms at the NA1SS mike aboard the ISS. Once contact was established, however, she reported being able to hear the Earth station's calls for two or three minutes before NA1SS was heard on the ground. Jerry Schmitt, KK5YY, who set up the Earth station, said part of the museum building was in the signal path. Joe Huffman, KG5GM--also a museum volunteer--was at the mike of the Earth station to establish the initial contact.

Seven third, fourth and fifth-graders--all enrolled in the museum's Space and Astronomy Day Camp--stood by with their questions in hand. Given the tardy start and a mid-QSO change in frequency, not all youngsters had a chance to ask their questions, however. Elementary pupils from a nearby school also were on hand as visitors.

Helms told the youngsters that music sounds the same in space and that the view from the ISS is "a spectacular sight," with the blue Earth and white cloud cover surrounded by a layer of air--although space, by contrast, is "absolutely dark, absolutely black," she said. The astronauts are able to spot large physical features on Earth, she said. "You can see the Grand Canyon and the Great Wall of China with no problem."

Schmitt, an engineer with Los Alamos National Labs, answered youngsters' questions following the contact. Jim Baremore, K5QQ, Brian Mileshosky, N5ZGT, and Paul Henckel, KA5H, assisted in the contact.

Helms also took the mike as RS0ISS on July 4 to speak with students at the St Petersburg, Russia, Junior Technical Centre, RZ1AWO. This marked the first European school contact arranged under ARISS. "It was really successful," said earthbound chief operator Boris Kirshenblat, UA1AAF. Two young hams were among the students asking questions.

For more information on the ARISS program, visit the ARISS Web site, <http://ariss.nasa.gov>.

==>AO-40 ACHIEVES A NEW ORBIT

AO-40 now is in a new orbit. Recent efforts to raise the satellite's orbit at perigee--its point closest to Earth--were somewhat more successful than originally anticipated. Ground controllers had planned to lift the perigee from 280 km to around 500 km. Successive firings of cold arcjet ammonia fuel resulted in an orbit that's 851 km at perigee, however.

"Indeed, the good news is that AO-40 is now in a safe and stable orbit!" said AMSAT-DL President Peter Guelzow, DB2OS, on behalf of the AO-40 team. "The bad news: All 53 kg of ammonia probably has been used up." This means further orbital adjustments--at least using the arcjet--are unlikely. Guelzow said ammonia stopped flowing after orbit 302, "and the pressure indicators in the telemetry show no more pressure in the motor and in the ammonia tanks, while the perigee clearly is higher than anticipated."

AO-40's height at apogee--58,971 km--was unchanged by the orbital adjustment.

Guelzow said stored telemetry was being downloaded and analyzed. Shut down prior to the start of the orbital adjustment, AO-40's transponders remain off the air. They will stay off as ground controllers adjust the satellite's attitude using on-board magnetorquing.

AMSAT-NA President Robin Haighton, VE3FRH, has said it's hoped that a slightly higher perigee for AO-40 will eliminate the effects of what he described as "a mysterious force" that alters the satellite's attitude when it comes through perigee. One theory, he said, is that atmospheric expansion caused by the current sunspot cycle peak was influencing the satellite's orbit in some way. The higher perigee should eliminate any atmospheric impact.

For more information on AO-40, visit the AMSAT-DL Web site, <http://www.amsat-dl.org/> or the AMSAT-NA Web site, <http://www.amsat.org>.--thanks to AMSAT News Service

==>2001 ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE SET

The 20th ARRL and TAPR Digital Communications Conference will be held September 21-23 in Cincinnati. The annual gathering provides an international forum for radio amateurs involved in digital communication, networking, and related technologies to meet, publish their work, and present new ideas and techniques for discussion.

Papers are invited for publication in the conference Proceedings. Presentation at the conference is not required for publication. Submit papers by August 6 to Maty Weinberg, KB1EIB, ARRL, 225 Main St, Newington, CT 06111 or via the Internet to lweinberg@.... Paper submission guidelines are available on the TAPR Web site, <http://www.tapr.org/dcc>.

The DCC is for digitally oriented amateurs of all experience levels to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. Sessions at the beginner, intermediate, and advanced levels will be offered in selected areas of digital communication. For those interested in attending only a session or two, registration for the conference is not required.

This year's fifth annual Automated Position Reporting System (APRS) National Symposium will be an all-day Friday event moderated by Steve Dimse, K4HG--the developer of javAPRS and www.findu.com.

Conference presentations, meetings, and seminars will be held at the Holiday Inn Cincinnati--Airport and Conference Center <http://www.basshotels.com/hotels/cvgap>; 859-371-2233. A special DCC room rate of $89/ (single or double) per night is available until September 1.

Conference registration includes the conference Proceedings, sessions, meetings, and lunch on Saturday. Registrations received before September 1 are $45. After September 1 or at the door, registration is $55. The Friday APRS National Symposium is $25; the Saturday banquet is $30; the Sunday seminar is $20.

Full information is available from Tucson Amateur Packet Radio <http://www.tapr.org> ; 940-383-0000; e-mail: tapr@....

==>"MISTER GUITAR," CHET ATKINS, W4CGP, SK

Guitar picker, music legend and Amateur Radio operator Chester B. "Chet" Atkins, W4CGP, of Nashville, Tennessee, died June 30. He was 77. Atkins reportedly died of cancer complications. Known as "Mister Guitar," Atkins--from East Tennessee--began his musical career in the 1930s playing fiddle. He earned his reputation as a guitarist, however, and went on to become the most-recorded solo instrumental musician in history.

Formerly WA4CZD, Atkins, a General licensee, in 1998 obtained the vanity call sign W4CGP--"certified guitar picker." He was an ARRL member. He won 14 Grammy awards during his career and was elevated to the Country Music Hall of Fame in 1973. He was presented with a Lifetime Achievement Award in 1993 by the National Academy of Recording Arts and Sciences in part to recognize his guitar-picking technique as well as his wide influence on music. He had more than 100 albums to his credit.

In addition to his own success as a performer, Atkins helped launch the careers of other notable performers. He is given primary credit for developing the uptown "Nashville Sound" that helped country music to compete with pop music.

In his later years of performing, he sometimes paired up with musicians from the pop and jazz worlds and was a frequent guest on the radio program "A Prairie Home Companion."

A funeral service for Chet Atkins was held July 3 in Nashville's Ryman Auditorium, which formerly served as the home of The Grand Ole Opry where Atkins performed for many years.

More information on Chet Atkins is on the Chet Atkins, Mister Guitar Web site <http://www.misterguitar.com/index.html>.

==>KC8BFD IS NEWSLINE'S 2001 YOUNG HAM OF THE YEAR

Patrick Clark, KC8BFD, a 17-year-old ARRL member from Elkview, West Virginia, has been named the 2001 Amateur Radio Newsline Young Ham of the Year. Award Administrator Bill Pasternak, WA6ITF, says Clark is heavily involved in public service, emergency communications and youth recruitment.

The Young Ham of the Year Award is jointly sponsored by Pasternak's Los Angeles-based Amateur Radio Newsline, Vertex Standard USA (Yaesu) and CQ magazine. The award is presented each year to a radio amateur 18 or younger who has provided outstanding service nationally or locally or has contributed to the betterment of the state of the art in communication through Amateur Radio.

A licensee since age 10, Clark comes from an all-ham family. His father, Jeff, and mother, Tina, are K8JAC and N8TSY respectively; his sister, Erin, is KC8PZZ. Patrick Clark has been involved in emergency service work from the day his ham radio ticket arrived in the mail. He was among amateurs who responded in the wake of the West Virginia Field Day floods of 1998--when the annual emergency preparedness drill turned into the real thing as the skies unexpectedly opened up.

In addition to his Amateur Radio Emergency Service activities, KC8BFD is also a certified severe weather spotter with SKYWARN. Clark has twice spoken at the Dayton Hamvention Youth Forum, and he promotes Amateur Radio to other youngsters through personal appearances.

Among those supporting Patrick Clark's nomination was ARRL West Virginia Section Emergency Coordinator Morris "Mac" McMillian, W8XF. "I have always been able to rely on Patrick's ability to think on his feet in a drill or actual ARES activation," McMillian said, adding that he believes that the future of ham radio is in good hands with amateurs like Patrick Clark, KC8BFD.

The 2001 Newsline Young Ham of the Year Award will be presented on Saturday, August 18, at the Huntsville Hamfest in Huntsville, Alabama. As Young Ham of the Year, Patrick Clark will receive--courtesy of Vertex Standard USA--an expense-paid trip to the 2001 Huntsville Hamfest, along with a gift of Yaesu ham radio equipment. CQ magazine will treat Clark to an expense-paid week at Spacecamp Huntsville and other gifts. Amateur Radio Newsline will present a commemorative plaque at the award ceremony.

For more information, visit <http://www.arnewsline.org/> .--Amateur Radio Newsline press release

==>ARRL MEMBER TOPS FIELD IN WORLDWIDE DESIGN COMPETITION

ARRL member Indranil "Kitchu" Majumdar, VU2KFR, of Calcutta, India, is the overall winner of the Texas Instruments Analog Design Challenge <http:www.ti.com/sc/analogdesignchallenge>. The competition carries a $100,000 top prize. An independent panel judged Majumdar to be the overall winner as well as the winner for Asia.

A member of the Calcutta VHF Amateur Radio Society, Majumdar won the top prize for designing a railway collision-avoidance system. His design incorporated a variety of Texas Instruments' power-management, interface, RF, logic and microcontroller products. The TI competition called on engineers to come up with real-world designs that utilized Texas Instruments devices.

Texas Instruments said that Majumdar's Railway Collision Avoidance System 2001, or RACAS, "uses paired digital transponders for radio ranging and quasi-packet connectivity."

Licensed since 1984, Majumdar is a founding member of the Calcutta VHF Amateur Radio Society and a life member. He's been an ARRL member since 1989. He's also a member of the Amateur Radio Society of India and of IEEE.

Majumdar was active during the Orissa cyclone disaster operation in 1999 and took part in the Sagar mobile operation last year (see "Sagar 2000: Public Service in India," QST, May 2001, written by Kitchu's brother, Nilanjan "Horey" Majumdar, VU2HFR). In addition to public service and VHF and satellite activities, he's an avid DXer and HF CW, PSK31, and digital-mode operator.--thanks to CVARS

==>SOLAR UPDATE

Solar sage Tad Cook, K7VVV, Seattle, Washington, reports: It has been a quiet week. There were no active or disturbed days, and solar activity declined. Average daily solar flux, compared the past week to the previous, declined over 51 points and average sunspot numbers were down more than 86 points.

Activity will probably reach a short-term minimum on Friday and Saturday, when solar flux is around 115, then it is expected to rise back to 130 by July 10, and near 200 around July 13-20. No increased geomagnetic activity is forecast, but the emergence of new sunspots could change that.

With summer here, MUF (Maximum Usable Frequency) is depressed. About the only openings on 10 meters are E-layer skip, which is somewhat sporadic and doesn't offer the longer distances of F layer communications. Twenty meters is open well into the night.

Sunspot numbers for June 28 through July 4 were 143, 98, 115, 108, 130, 132 and 106, with a mean of 118.9. The 10.7-cm flux was 140.2, 139.9, 136.6, 135.4, 134.3, 131.9 and 127, with a mean of 135. Estimated planetary A

indices were 5, 7, 10, 12, 8, 9 and 8 with a mean of 8.4.

==>IN BRIEF:

* This weekend on the radio: The annual run of The Great Circus Train (W9D) with operation on 7.240 or 14.240 plus 146.55 MHz FM simplex (details at http://www.bsss.org) and the Venezuelan Independence Day Contest (SSB) are the weekend of July 7-8. JUST AHEAD: The IARU HF World Championship, the FISTS Summer Sprint, the CQ Worldwide VHF Contest and the QRP ARCI Summer Homebrew Sprint are the weekend of July 14-15. See the ARRL Contest Branch page, <http://www.arrl.org/contests/> and <http://www.hornucopia.com/contestcal/weeklycont.html> for more info.

* ARRL Audio News shifts to single audio format: Starting with the July 6 edition, ARRL Audio News will be available only in MP3 format, which is compatible with currently available media software, including RealPlayer. ARRL Audio News will continue to be available for playback directly from the ARRL Web site <http://www.arrl.org/arrlletter/audio> or for downloading as an MP3 file. ARRL Audio News--a weekly Amateur Radio newscast--is available for personal or repeater playback without charge or special permission. ARRL Audio News will remain available as a dial-up telephone service at 860-594-0384. ARRL Senior News Editor Rick Lindquist, N1RL, produces the program. He said the change to MP3-only will mean consistently superior audio quality and eliminate the duplication of effort involved with producing the newscast in two audio formats.

* Outgoing QSL Service tops one million cards for 2001: The ARRL's Outgoing QSL Service Manager Martin Cook, N1FOC, reports that as of June 29, 2001, the service had shipped 1,041,316 QSL cards. This includes cards going to US incoming bureaus and cards sorted and mailed by contractor. "This is an increase of 135,456--15%--more cards than we had mailed at this time last year," Cook said. The Outgoing QSL Service handled 1,868,895 cards in 2000. For more information, visit the ARRL Outgoing QSL Service Web site, <http://www.arrl.org/qsl/qslout.html>.

* New York cell phone law does not apply to Amateur Radio: The widely reported New York bill banning the use of hand-held cell phone while driving should have no affect on Amateur Radio mobile operation, according to ARRL General Counsel Chris Imlay, W3KD. "There is no ambiguity in the bill," he said. The bill, A.9280, was signed into law recently by Gov George Pataki, a former amateur. It requires cell phone users to use hands-free devices when calling. The measure specifies "mobile telephone" use, and defines a "mobile telephone" as a device used by subscribers to a wireless telephone service. That, in turn, is defined to specify a commercial two-way wireless telecommunications service that accesses the public switched telephone network. The bill also specifies "using" as holding the mobile telephone "to, or in the immediate proximity of, the user's ear." The new law will be phased in starting November 1. It calls for fines of up to $100. The measure also calls upon the New York Commissioner of Motor Vehicles to study the effects of the use of mobile telephones "and similar equipment" in

conjunction with the operation of a motor vehicle and report back to the legislature in four years. The full text of the measure is available on the New York legislature's Web site <http://assembly.state.ny.us/leg/?bn=A09280&sh=t> . A similar measure requiring hands-free cellular telephones recently passed the Rhode Island legislature.

* Museum ship special event set for July 21-22: Amateur Radio stations aboard or associated with some 60 historic vessels will be on the air July 21-22 for the annual museum ship special event. The yearly outing is sponsored by the USS Salem Radio Club, K1USN, in Quincy, Massachusetts. Warships, submarines and various motorized vessels from WW II and earlier from the US and elsewhere will be on the air. All have a history and a story to tell. A certificate is available. Visit the USS Salem Web page <http://www.qsl.net/k1usn/event.html> for a list of participating ships, operating frequencies and certificate information.

* New York amateur antenna bill a step closer to passage: ARRL Hudson Division Director Frank Fallon, N2FF, says that New York's Amateur Radio antenna bill, Assembly Bill 1565, has been reported out of the Ways and Means Committee. Both A. 1565 and the companion bill, S. 2893, are in the Rules Committee, where they can immediately be brought to the floor before the 2001 session ends. Fallon says the legislative session resumes July 10. "The good news is that it's not over yet, but the bad news is that we have to continue to make the telephone calls, write the letters and send the e-mails," Fallon said. "We need to continue pushing for action on the bills." Fallon urged New York hams to continue sending the same message to Albany, "Please enact the Amateur Radio legislation." He said Senate Majority Leader Joe Bruno <bruno@...>, House Speaker Sheldon Silver <speaker@assembly.state.ny.us> and Gov George Pataki <gov.pataki@...>--a former ham (K2ZCZ) and a current ARRL member--each have the power to bring these bills to the floor for a vote. "We need to ask them to do so, now." Additional information on how to contact key lawmakers is available on the Hudson Division Web site, <http://www.arrlhudson.org>. "You may want to send QSL cards this time around," Fallon said. "The governor knows what they are."

* Ten-Tec solicits comments on pending transceiver: Ten-Tec is looking for comments and suggestions from the amateur community on its proposed Model 516 "IF-DSP" low-power (variable from 1-5 W) HF transceiver--a general coverage, software-defined radio. The rig is expected to be on the street by next January at a price under $600. It will offer CW, SSB and FM and AM and 38 DSP filters from 200 Hz to 8 kHz. Because of its software-defined design, Ten-Tec will be able to incorporate changes much later in its production schedule than typically is possible with discrete-component design. Ten-Tec says almost all functions and features are stored in flash ROM. To add new features, users will download the latest software version from the Ten-Tec Web site. Ten-Tec invites suggestions for features to be incorporated in the new radio via e-mail, sales@.... Details on the transceiver are available on the Ten-Tec Web site, <http://www.tentec.com/TT516.htm>.

* July is IOTA Month: DXers who participate in the IOTA (Islands On The Air) program, sponsored by the Radio Society of Great Britain (RSGB), know that July is IOTA Month. This is quite possibly the best month to work a new one, because so many people in the Northern Hemisphere go on IOTA DXpeditions at this time of year, especially during the RSGB IOTA Contest the last full weekend of the month. If you are just starting out in this DX award program you can easily work your first 100 IOTA counters and some of the more serious operators can work well over 200. This year's contest will be held on the weekend of July 28-29. For more information on IOTA, visit the RSGB's Islands on the Air Web site, <http://www.rsgbiota.org/>.

* French RAC Web site to close: Radio Amateurs of Canada has announced that it's closing "with regret" its French-language Web site. RAC said it attempted in vain for more than a year to find a volunteer with the time and skills to manage the French language pages on the RAC Web site. "Much of the information is no longer current, and we have therefore reluctantly decided that as of June 30 we will close down the French pages and replace them with links to other francophone sites," an RAC announcement said. "We apologize to those of our members who make use of our services in the French language." The RAC Web site is at <http://www.rac.ca>.--RAC

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration

to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

I think he is just trying to recover the cost of burning the CD which seems justified. In any case ethically NO copies of the CD should be made.

287. Disaster Communication Field team / base team.

Yahoo group: m_a_r_s
Date: 2001-07-31 06:58:50 UTC
From: vu2nlf
Topic: 287 Message: 287

Dear Friends,

During the Gujrat earthquake Disaster, Hams have done a great job Specially MARS hams on Field and at base in Mumbai.

This has brought a lot of attention to Ham Radio, Specially because of the Press coverages. Many of NGOs and Govt Organisations have approched us to tie up with them for preparedness of possible future disasters.

So far we have not tied up with any of the NGOs or Govt organisations, But sooner or later we need to tie up with some of them for the following reasons.

1. Financial Aids.
2. Fast Transportation to the Disaster Area.
3. Proper utilization of our services.
4. Systematic planning and coordination for optimum results.

In order to tie up with any orgainsation we need to first evaluate our strength (Man Power). We need to have a clear picture for commitment.

We have learnt a lot from the gujrat Disaster. There were many flaws in planning and prepareness. But Most importantly The Base was not properly coordinated. On one hand VU2RIG from his QTH and VU2ZRS & VU2GT from Mantralaya did a great job, others
felt left out and could not contribute to the cause.

It is quite obvious that not everybody can venture into the fields during the disaster, but they would surely like to contribute from Mumbai. In Future We Shall require many many hams working from Mumbai coordinating with the NGOs and Govt. We can have Specific assigned hams interacting with the NGOs and GOVT throughout the year and keep ourselves updated with the latest news. These specific Hams can then perform and provide the optimum service during the actual disaster.

The Disaster Communication Teams with be in 2 parts, (1) The Field teams . (2) The base teams (Mumbai). This will be on permenent bases, even during the Simulated exercises, these Hams will work from their assigned locations. (Field or base) such as Mumbai Hams will work from matralaya and other NGO locations, they will have to actually put up a station at their locations in Mumbai and field teams will work from the field.

All members interested can give choice (field or base) to me (NLF) A.S.A.P. This will help in evaluating our strength and speed up the process of tieups with the NGOs and the Govt.

MUMBAI AMATEUR RADIO SOCIETY

Dear Friends,

The Ganesh Visarjan this year is on 1st September 2001. The past records reflect that we have maximum
participation in this event, most of our members volunteer to offer their communication support during this event. Lets hope that we can more number of participents this year.

Mr. P.V.Jaiprakash [VU2JPN] shall be handling the affairs of this event, all members interested to participate may contact JPN on 5244784 at the earliest. This will help him to plan & co ordinate with the concern NGOs and Govt Authorities.

Dear Nilesh
I send my first e-mail to the e-group.
Your approach is most appropriate for Ham Radio related Disaster Management preparation.
As for me, I?m available for both locations - field / base. We would be able to decide suitable use of oneself with discussions and prior planning
Regards
Rajen

Subject: [m_a_r_s] Disaster Communication Field team / base team.

Dear Friends,

During the Gujrat earthquake Disaster, Hams have done a great job Specially MARS hams on Field and at base in Mumbai.

This has brought a lot of attention to Ham Radio, Specially because of the Press coverages. Many of NGOs and Govt Organisations have approched us to tie up with them for preparedness of possible future disasters.

So far we have not tied up with any of the NGOs or Govt organisations, But sooner or later we need to tie up with some of them for the following reasons.

1. Financial Aids.
2. Fast Transportation to the Disaster Area.
3. Proper utilization of our services.
4. Systematic planning and coordination for optimum results.

In order to tie up with any orgainsation we need to first evaluate our strength (Man Power). We need to have a clear picture for commitment.

We have learnt a lot from the gujrat Disaster. There were many flaws in planning and prepareness. But Most importantly The Base was not properly coordinated. On one hand VU2RIG from his QTH and VU2ZRS & VU2GT from Mantralaya did a great job, others
felt left out and could not contribute to the cause.

It is quite obvious that not everybody can venture into the fields during the disaster, but they would surely like to contribute from Mumbai. In Future We Shall require many many hams working from Mumbai coordinating with the NGOs and Govt. We can have Specific assigned hams interacting with the NGOs and GOVT throughout the year and keep ourselves updated with the

latest news. These specific Hams can then perform and provide the optimum service during the actual disaster.

The Disaster Communication Teams with be in 2 parts, (1) The Field teams . (2) The base teams (Mumbai). This will be on permenent bases, even during the Simulated exercises, these Hams will work from their assigned locations. (Field or base) such as Mumbai Hams will work from matralaya and other NGO locations, they will have to actually put up a station at their locations in Mumbai and field teams will work from the field.

All members interested can give choice (field or base) to me (NLF) A.S.A.P. This will help in evaluating our strength and speed up the process of tieups with the NGOs and the Govt.

Dear Friends,

Ganesh Visarjan is probably the most popular event, reason best known to you all. Maximum Members participate in this event
VU2JPN is handling the affairs this year. vu2jpn@...

I now request all the members to kindly inform about your participation to him [ASAP] and also extend your assistance in preparation of this mega event.

I also request all the SWL's to take this oportunity and participate in this event, which I am sure will give them a very good exposure to our wonderful hobby.

Please note this year we are offering our services to many Govt & Non Govt Organisations. Hence we require as many hands as possible.

My XYL (of two months) won't let me go to a hamfest by myself - she has this fear that she will come home one day and find a 40+ foot tower in the backyard - I just don't understand why she feels this way .

A good tip I got from a fellow ham that I bought a two meter rig from at our last hamfest: "Tell her it cost $40.00" Matter of fact, tell her everything cost forty dollars. After a while, she'll catch on but she'll go along with the gag (hopefully!) At least it worked for me.

Be a MAN. If they don't like you digging up their flower garden to put up your 70ft tower, or they get upset because your ham shack overtook the spare bedroom then the kitchen and then the living room, or they complain because they have to ride in the back of the bed of the new pickup truck because your ham gear took over the passenger seat, tell them to get out. Who needs them anyway. That next contact is what it is all about. If they don't know that they don't deserve you anyway. I almost forgot it was the money she makes on her job that got you all that neat stuff. Any relationship is a give and take situation be it ham radio equipment or everything else. I found that while a $3,000 state of the art rig would have been nice my old HW101 got me enough wall paper to cover two or three rooms. The 100ft tower would have been great too but the wires worked. I would loved to have had a Corvette but the minivan-got me back and forth. Tell you what guys I would trade all my eqipment to have her back but the good Lord wanted her more then me. The key to it all is just make

sure you get a good one and it will all work out. And you are right KU4QD this is a very sexist question. 73 WB4QNG

I know a ham that used the "It cost forty dollars" option a lot. It worked very well until by accident he left a receipt for a new dual-band mobile worth $400.00 on the table. The XYL found it, and all @#&⋆! broke loose.

Needless to say, the marriage ended soon after. But to be fair, she was a royal pain anyway. My XYL even said that!

No, I don't use the "forty-dollar" option; my XYL has her ticket and scours the magazines and tells me what HF beam to check out!!! (I love her!!!)

My wife saw the fun my son and I were having hamming it up and studied hard to become a Tech (a totally new field of study for her). She maxed the test and even though she said she just wanted to get the tech license had me stop on the way home to buy the books and code tape for the general exam.
Me thinks me is in trouble, she may very well beat me to an upgrade.
Since she is licensed now she understands and moderates and tolerates my purchases.
Love you KB9YOD
BTW a RN who can build an antenna from scratch (I showed her some soldering and brazing tricks), who could ask for more? And she has an interest in kits...

Brother, have you got issues!

Hoo boy, what an article. I really, seriously, hope this was supposed to be humour, and that you realize it's sick humour. This world has seen a dramatic rise in divorce rates and I think it's actually higher amongst hams than others. At least, I am seeing far more hams in my counseling practice that I did, say, ten years ago, despite claims that the ham population is declining.

Each of this person's responses is scary. First, because I have known hams who would have used any one of these ten items, and thought it was reasonable to do so. Secondly, because each one points out a very real problem in people in this hobby. I'm not a politically-correct type by any means; the writer had every right to write this. I just hope that most of us can tell how off-balance and socially dangerous a person is who believe any one of these excuses. Based on the hams I counsel and the ones I meet at clubs who really need counseling, I fear that most of the readers on this website won't "get it".

Ten problems that the original article writer has, based on his own ten list:

1) He's not financially successful enough to own a home, yet he's spending so much at hamfests that he's willing to create tension in his marriage.

2) He puts his hobby above the well-being of his children. Alternatively, he had children before he was mature enough to deserve to have him. some people should not breed.

3) He believes in the "your" versus "mine" approach to confronting issues. This, of course, creates a win-lose scenario, increasing tension and driving a rift between two people who, in theory, agreed to be team mates until death "do us part".

4) He treats his wife as if she's stupid. If he shows up at home with a new rig, is she really going to believe that a homeless ham mugger "gave" it to him in return for his wallet? Also, he shows sympathy for a group that has incredible political strength: the homeless. You ought to come down here to Sausolito to hear them wage fights for the right to sleep on the benches on the beach, instead of being asked to sleep on the benches in the park across the street. "This is the lifestyle we have chosen, and we're not about to give it up" is the quote in the newspapers. He expects his wife to be stupid enough to fall for this.

5) He expects his wife to adhere to the stereotype that she focuses on her looks. But then again, maybe he's shallow enough that he married a woman based on her looks. Further, he makes the assumption that she has desires based on material goods (dresses) just as he does (hamfest acquisitions).

6) He thinks it's OK to make decisions on behalf of other human beings. The family needs to diet? Wouldn't that be their decision, not his? Lots of hams are arrogant, but this is extreme.

7) More evidence of financial irresponsiblity. Whatever happened to "the amateur is balanced"?

8) He thinks that parroting the latest headline catch-phrase can cover his irresponsible spending habits.

9) He believes in using a person's words against them. Sort of a mercenary soldier attitude.

10) Sort of a repeat of number 6, he thinks it's OK to choose what a person will do for entertainment.

My wife is not a ham. She took a ham class, because she was interested in emergency preparedness, but she becamse dreadfully bored with radio theory and rules & regs (note to the anti-cw crowd: she thought CW was very cool and was up to 20wpm in four weeks using SuperMorse). So she never took the test. She does not understand my desire to chat with people in far away lands, but she accepts it willingly. That is because we have a good marriage. I do not need excuses to spend money at hamfests. I let her know what things I'm looking to buy and why, and what I'm willing to sell in order to get them. She even looks for things on eBay that I'm seeking and helps. This is the only way to fly, boys. Get rid of the old stereotypes, and you'll get rid of the old boundaries, and you'll have a lot more fun. Don't go to hamfests just meandering; go with a goal and do nothing else.

The guy who wrote this either has real issues with women, or has a sense of humour that's 20 years out of date. It isn't funny, in any case.

Based on the hams I meet and the pix I see on the 'net, number six applies mostly to the hamfest attendee.

How come so many hams are obese? No wonder the younger generation doesn't seek the hobby. They wouldn't want to be seen around the bellies that hang over the belts! Geez, I don't, for fear I'll become one!

You are just a kid, skinny boy. Wait till you get into your forties, fifties and sixties. You will be just like one of us, whether you are a ham or not. Obeseness has nothing to do with the hobby of amateur radio.

You with the counseling practice, why don't you get a life and a sense of humor? Do you really think those 10 "excuses" are really used? I take this article as being tongue-in-cheek. I think most of the rest of those who replied do too.

First of all, never forget the old adage: "If mama ain't happy, ain't nobody happy."

I got my wife an expensive diamond anniversary ring early this year, so all hamfest purchases this year are "covered." Furthermore, after she let me buy the new Sea Ray last fall, anything I bring home from a hamfest would cost chump change by comparison.

Finally, judging from hamfest and ham club attendees I see, I think hams ARE more obese than the average population, for the same socio-economic distribution.

C'mon guys, get away from that rig and that computer. Join a health club/gym. Walk the golf course instead of riding, and take a 2 mile walk each day that you don't walk the course. If you weigh more than 10 pounds above what you weighed when you were 20, then shame on you.

It seems to me that you are the only one who didn't "get it". I think the only person on this site that needs counseling is the "counselor". For you to believe that this was a serious post and to go to the effort of writing a long and detailed analysis of a humorous post, clearly shows that you need some professional help. Good luck in getting a grasp on reality. Maybe its time for a vacation bud. You might try calling Dr. Laura. Ask her to help you find your sense of humor.

Dr Laura, counciling and sense of humor

I'm pretty sure these three concepts don't belong together. Especially since Laura's doctoral degree is in physiology.

Hey Guys, I am the luckiest ham in the world! My XYL, Alice KG4FUP, has never objected to what I buy at Hamfests. She's got an Extra, we go to Dayton every year and we both have a great time. She has a sharp eye for classic gear like Collins and Drake, and appreciates the value of quality radio!

Just our 2 cents worth.

Omigosh, thankyou thankyou thankyou!!! It has been a LOOONG time since anybody called me a kid! I'm 73 years old. I have always weighed within about 10-20 pounds of what I weighed when I was 20. The formula seemed real easy. If I was getting too big, I just ate less. It always puzzled me howcome hams are smart enough to pass tests, get licenced, build antennas and radios, but not smart enough to understand that little bit of simple math!

In my nearly 50 years of hamming, I've always noticed that the places I go where I see the fattest people are ham clubs and hamfests. Lots of people 40, 50, 60, 70, 80 live near me, and the vast majority are within 20 pounds of what some might call an "ideal" weight. There are no bellies hanging over belts. This "fat ham" trend seems worldwide, but it seems more prominent in the U.S. than elsewhere. But then, obesity seems more prominent in the U.S. than elsewhere.

"You will be just like one of us, whether you are a ham or not." Really? Sounds like today's pop psychology, where people are mean spirited, angry, or ADD because of their parents. Nobody seems to be willing to admit "I am what I am because of the choices I made." You're not fat because you're a ham, that's true. But you're also not fat because you're 40, or 50, or whatever. You're fat because you eat too much for the amount of exercise you do. Unless you have a thyroid problem, and those are completely treatable, so they're also not an excuse.

Seems simple to me....

<<....Do you really think those 10 "excuses" are really used?>>
Yes. I have heard them being used at hamfests. I have had wives of hams in my practice tell me that these excuses have been used at home. I have had hams in my practice tell me that they use these excuses (and more that are even worse).

Most humour comes from a bit of real life. You've probably heard the phrase "There's truth in jest." This is a very clear case of it. There's a lot of truth in this particular jest.

No difference. As I said in a different post, I would find it funny if it weren't for the fact that hams and their spouses come to me for marriage counseling, and one of the major issues is very often ham gear spending and the excuses used for it. It's OK to spend money on having fun. That's absolutely wonderful. But priorities need to be kept in mind - family first. Thankfully, this list of 10 at least did not indicate the sort of lies that guys often use (again, based on guys telling me what lies they use in a counseling environment, where they claim they're not telling a joke). Spending is fine, just be sure you and your spouse are on the same page - that you agree it's OK to spend the money. No matter if it's a new lawn mower, diamond necklace, boat, ham gear, golf equiment, or daughter's prom dress.

Am I being too serious? Would the author's spouse think the list is funny? If not, then I'm not being too serious. If she (I'm assuming traditional male/female roles here; pardon me if that's offensive) DOES think the list is funny, then the author and his wife are to be commended on having a good marriage with open communications.

PLEASE TAKE THE TIEM TO READ THIS!! THANKS

i think that this article is great..and there is a lot to learn from it..as i am only 16 years old i have just got my ticket fro 6m, 2m and 70cm..its just great..i have never fallen in love and dont intend to untill i find the one that doesnt mind me been on radio[hopefully she is a ham also].i feel sory for other hams that have had there wife walk out on them because they could let there husbands have there hobby while they had therr's..from every comment that somone has put up on this subject..there is somthing to learn.

and you must be a sick ham to put these articles down..ham radio is not dicouraging young people at all..[and never think/say it is] then internet is doing it..

i believe older hams should get off there seats in there ham shack and get out there and help get new blood into it..

i believe there is a lot to learn from the old hams..but most carnt be stuffed putting the effort into teaching new people what tehy were taught when they first got there licence..

i started out on CB radio 2 years ago..and then i heard about this thing called "Ham Radio"..i knew nothing about it..nothing about electronics,nothing about propogation,nothing about how to use ham radioes...i spent 1 year studying to get my licence and with the help of a very nolagble ham who was willing to teach me..i became "ZL2TCR"...

i am very proud to have my licence framed and hanging on my wall in my shack..
my pearants or family have never been interested in radio of any kind..but they have been so supportive and were so proud when i got my licence..i was only 15 years old when i

passed the exam..

my point is that the internet is taking away the communication in ham radio by young people..it is sad to see..there is only one way we can get more hams..we have to get out of our shacks [when someone new become interested in the hobby] and help them,encourage them and give them all the help they want/need..

i do not mean to offend any one by the content of this article

Several things I have learned over the years...

When going to Dayton, bring back something with diamonds.
Zales has a good sale during the Hamfest. It gives the message that you were thinking of her.

An old Elmer taught me that when coming home with the latest Hamfest prize, if you could not get it in through the basement window, then you had better bring it in through the front door, wrapped in a fur coat!

Hi Hi,
Bob

A few things that have worked well for me and my wife...
- I always make sure the finances are in order before purchasing new gear. Sometimes this means selling some other gear online, but that's okay with me.
- I usually talk to my wife before taking out the pocketbook. This way she knows how much it is going to cost and there aren't any "surprises".
- Ham gear holds its value if you take care of it... so it's not like you're throwing your money away. In most cases, a person can get close to 100% (or better in some cases) of his

purchase cost back by selling online. Explain this to your spouse. If you ever need the money (or just don't need the gear anymore), you can sell it and be in good shape.

Mail this to a friend! (http://www.eham.net/forums/mailto/1?id=8151)

I get tired of the political correct people hammering others when they have a story or comment having to do with the normal differences of the sexes.

More hams are male than Female, Its a fact. I think most men hams have DREAMED about getting their Wives intrested in ham radio. I give the sales pitch every year when the classes are forming. I tell her that I will go to class with her, and that she could talk with me every night on her way home from work. Its not that she is not smart enough for it, I have helped her study for some of her state certification tests (Hospital worker) she is simply not interested in ham radio.

As far as my purchases, I have never had her even ask me to return something I have purchased. I was a ham when we were renting before we purchased our first house, I must admit most of my hamming was with used "Good Deal" equipment and wire antennas back then. I used to go to Dayton every year with my Son and friends, twice my Wife went with me.

Something I have always done is buy ham and computer stuff with my Extra Earnings. Wire some phones here, fix a computer there, making a little money on the side, I used to save that and a couple of times I would have 1000.00 to spend at Dayton. That is how I purchased my Icom-735 and its almost 10 years old and still works great. I guess the only sales pitch I have given my Wife is "Pam it will last for years"

So guys, try and not spend the Familys money (your regular job income) on toys, instead get something going on the side and then you dont have to feel guilty when you buy something.

I have not been to Dayton in over 6 years, but every year Pam reminds me of it comming up (When she is planning our vacation days for work) But with Ebay its like a Hamfest in my computer whenever I have time to look and have the extra money to spend.

If you have a Good Marriage it can handle a few bumps, like bringing home a new radio, even if its a little more than you should have spent. Don't lie to her (or him) about it, thats insulting and why insult the most important person in your life? If you dont have a Good

Marriage, nothing in your life will work, and alot more important things than ham radio will suffer (The bigest thing that will suffer is your Children) so Fix the Marriage before you do anything!

These words are something to live by, If Mom is happy then the entire Family is happy, if she is never happy than life if a living hell!

73's

Lying to the wife

This is exactly what I'm talking about. Assuming this guy is serious, his marriage is in trouble. What do you suppose his wife BSes him about? Do you think she really spends all that time at the mall?

On a lighter note, even if I did believe it was acceptable to tell my wife a lie, this one wouldn't work for me. I'm too much of a collector as it is. Her reply would be "How nice of you to save your friend the trouble of finding a charity for it. I know just the college ham club that can use it!"

KA8OCN knows what he's doing

Great job, Delbert! You use a sales pitch with your wife that is based on truth and honesty. When you start out like that, you'll be forgiven if you go over a pre-set spending limit.

Regarding "normal difference between the sexes", you are right that hams are more often males. However, this does not excuse us from family priorities.

I tried to get my wife into ham radio. She took a class, and hated the theory, but found the code easy and fun. To this day, she still cranks up Morse Academy on the PC and practices, because she enjoys it; much as I enjoy playing my violin (even though I'm horrible at it).

She made an offer that got me to quit asking. She said, "I'll be glad to become a ham, attend club meetings and even get on the air, if you'll join me in one of my activities. If you'll take a Shiatsu massage class and join me and my friends when we give massages to the poor, then I'll become a ham." So for me, when the rubber finally hit the road, I became thankful that we communicate well, and felt no more compunction to encourage her to get into the hobby!!!

If your wife becomes a ham, what of her activities are you willing to learn and participate in? One guy I know has an agreement with his wife. He can do whatever he needs to for ham radio - radios, antennas, towers - as long as she can spend the same amount on landscaping and her flowers. And he has to help her with the parts of landscaping that she can't do well, like digging holes.

Make a deal with her, and things go very well, without having to make excuses.

I did have to chuckle last night, though. I was reminded just how much I've absorbed over the years that she has let go past. I shut down the rig sooner than normal, and mentioned that the band had gone dead. She asked, "How much will that cost to fix?"

I still can't decide what the best excuse out of the top 10 is.

3. "Your Mom ate that much during her last stay."
5. "I saw a nice dress for you at Goodwill."
9. "You said not to pass up a good sale."

These are all pretty good. But I think number 9 is the BEST, blame it all on her! "But you TOLD me NOT to pass up a good sale!"

I should perhaps add that my XYL had her own callsign when we met at the radio club some 25 years ago.....this means major purchases are discussed and agreed anyway. Like the discussion on whether to have a big tribander for the HF bands, or monobanders. We started with agreement on the 80 foot tower, and then discussed what went on it. The only time this might have failed was when I was told to buy a decent oscilloscope because the old one was too unreliable.

This is an interesting topic. If the XYL doesn't understand and complains about what you spend, then a $400 piece of equiptment becomes $40. What I do, is leave it in the trunk, and bring it in when she isn't around. As far as new equiptment purchases, I have them sent to my office, and do the same trunk routine. She never knows whats what in the shack anyway.
gl to all..

Since we're migrating from humor to real approaches to this problem, I'll throw in my 2 cents. My wife fits the stereotype anti-ham pretty well, but we are still in love. I tell her I want something then start shopping and studying features, costs, benefits, etc. With the wealth of info on the web, this can take a long time. I also feel that studying for the General (done) and Extra (in progress) licences and attending a few ham club meetings is helping me get ready to buy something, and this eats up more time. Even after all the studying, there's still choices to make, since available funds in my case will only support one rig at a time. Well anyhow, after a long enough time, say about two years since my Tech licence and first rig , she seems to be softening up a bit. By the way, my first rig was a 2-meter that was a Xmas present, not causing too much heartburn. Once I really know what I plan on getting, I think that sufficient warning and/or making the item a gift request, combined with suffienct solvency (she manages the checkbook), oughtta do the trick. This may seem like an extreme case of delayed gratification, but I really think it takes a long time to know what you're getting and exactly why (specially if you're not already an RF engineer). I am making it a point to really try to understand the stuff in the licence manuals, so that I buy smart, when I finally do it. And I will admit, after so many years as a student, I am used to studying for gratification.

When the XYL Objects to Hamfest Buys

Reply (http://www.eham.net/forums/post/Articles/8168)

Tell the XYL its far cheaper, far healthier, and far more conduscive to family life than drinking and staying out all night.

I have told all my single friends to do do what I have done. When you first start talking marriage, tell her, in no uncertain terms, that while everything else is open to discussion, complaining about ham radio is off the table and below the belt (Unless its really ridiculous)

I must be approaching this hobby all wrong.

I've been buying new (to me) gear fairly regularly - some of it is even really NEW gear. Like the guy who does side jobs, my radio fund comes from "out of the loop" income. I'm on a bonus program at work; about every 5th or 6th monthly bonus goes at least in part towrds Amateur Radio. Usually most of that money goes for trips for the kids, trips to Mervyns and Dilliards (one wife, two daughters - you figure it out), family vacations, guns and reloading gear (my other vice); maybe even automotive repair. One went for a massage table - I DON'T do massages. A couple of February & October checks have gone to jewelers and the like (guess who's birthday and Anniversary). Sometimes something has come up and I've put off purchases for a month; but they never get completely dropped.

It helps that I'm a cheapskate - always holding out for the lowest price on what I want, even if THAT makes me wait. I've gotten my goodies, and no complaints from the boss.

I must be doing something wrong.

Jimmy

Why didn't the "Therapist" comment on this approach??

This is an interesting topic. If the XYL doesn't understand and complains about what you spend, then a $400 piece of equipment becomes $40. What I do, is leave it in the trunk, and bring it in when she isn't around. As far as new equipment purchases, I have them sent to my office, and do the same trunk routine. She never knows what?s what in the shack anyway. GL to all..

Everything in moderation....
Mark

I think my view of this technique is predictable. If the author of this suggestion will accept 10% honesty from his wife in return, then they've achieved parity.

I appreciated one comment made on here about rigs. If you purchase them a bit used (but new to you), then you can sell them later for nearly what you paid. Thus, the process of getting a newer one isn't really that expensive.

Explaining to your wife-to-be in advance about the hobby seems like a direct approach, likely to succeed, or to identify the prospective bride as someone you really don't want to marry.

Presenting ham radio as a "lesser evil" compared to drinking and carousing has some interesting consequences. Most people expect you to continue to evolve. Therefore, having made it seem that you've evolved from drinking and carousing to ham radio, the XYL may wonder when you'll evolve from ham radio to whatever is the next 'less evil' thing. I rather expect most XYLs figured that you were giving up drinking and carousing in exchange for getting married anyway!

Makes me think of my early ham and marriage days. Without even meaning to, we often got our wives confused between ham radio and 'drinking and carousing' (today it's called "Beer v4.0", right?). We used to get together over a few 807s. Whether that was transmitting tubes or beers sometimes wasn't clear, although it was never intended as a ruse.

Hmm, nowadays, I suppose we all get together over a couple of 2SC2789s, eh?

BTW, 'counselor' would be more appropos to what I do than 'therapist'.

Gosh, why are we all typing away on here instead of getting on the radio?

Friends

Shree Ganeshaya Namaha.

All participants for ganesh visarjan should have the following:

1. VHF handies
2. Whip antenna
3. Tiger tail for whip
4. Head phones
5. Extra Battery /cells
6. Licence copy
7. Caps
8. ID cards
9. Rain wears
10. Polythene sheets
11. Power supply
12. Base stations
13. External antenna
14. Coax
15. SWR/Power meter

Those who cannot volunteer the event can lend their base stations etc for our towers and other locations. Pls.volunteer to lend the equipments.

Lets have more Ganesh Visarjans with all your help.

Dear OMs & YLs,

Mumbai Amateur Radio Society will be conducting a special Night Owl's Net on 14th August, 2001 at 23.45 hours in Mumbai, to celebrate 54th Independence Day of India.

The Net controllers are VU2NFS - Ms.Nafisa Shikari, VU2WLL - Mr.Vispy Mirza. The Net will be conducted on VHF 145.100 MHz. and 145.100 MHz. - 600 KHz. via repeater.

Please make it a point to check in to the Net and also help other fellow HAMS to attend the same. Please provide equipment assistance to HAMs who do not have any two metre capability.

Kindly convey the above information to other fellow HAMs.

73s,

De VU3MBF.

From: mehul2k@vsnl.com
Topic: 321 Message: 321

Dear OMs & YLs,

I am happy to inform you that we have been granted the permission to have our own tower at Chowpatty for communication ease.

This enables us to function more efficiently in the event and also promises better scope in terms of recognition & assistance from legal authorities.

This also leaves us with a higher expenditure which can be counter-acted only by bringing donations and increasing the corpus. Therefore I request all HAMs to put their best and try to arrange for whatever funds in form of donations, etc. for the event.

Please co-operate with your fullest to enable us bring more life to our events and society.

73s,

De VU3MBF.

Dear Friends,

Mehul has already put up the request for Donations for this Mega Festival Event.

We are likely to incur expense of about Rs.12,000/- , So far we have managed to Rs.5,500/-

Rs. 5000/- from a Construction Company .. Thanks to VU2UGJ - Mukesh Jaitley.
Rs. 500/- From Mr Narayan Sharma ....Thanks to VU2SWS - Sarla Sharma.

We are still talking to many sponsorers, we may get some good sponsership (Since we have our own exculsive tower at
the prime location at Chowpatty).

Nevertheless I request all our members to get donations/Sponsorers and donate generously for this Mega Event.

73s

Subject: [m_a_r_s] Ganpati Visarjan Event

> Dear OMs & YLs,
>
> I am happy to inform you that we have been granted the permission to have our own tower at Chowpatty for communication ease.
>
> This enables us to function more efficiently in the event and also promises better scope in terms of recognition & assistance from legal authorities.
>
> This also leaves us with a higher expenditure which can be counter-acted only by bringing donations and increasing the corpus. Therefore I request all HAMs to put their best and try to arrange for whatever funds in form of donations, etc. for the event.
>
> Please co-operate with your fullest to enable us bring more life to our events and society.
>
> 73s,

The ARRL Letter
Vol. 20, No. 35
August 31, 2001
***************

IN THIS EDITION:

* +Northern California ARES responds to fire emergency
* +ARRL clears the air in power-line noise cases
* +Brief AO-40 outage gives earthlings another scare
* +FCC wants explanation for alleged interference
* +ITU adopts recommendation on amateur qualifications
* +US, UK WRTC 2002 teams choose partners
* +Former ARRL staffer Bill Jennings, K1WJ, SK
* Solar Update
* IN BRIEF:
This weekend on the radio
Correction
Sign up for ARRL Level II Emergency Communications on-Line course
+Tristani to depart FCC September 7
ISS crew to resume ARISS school contacts after Labor Day
Ham-sailor KB6TAM postpones return
ARRL E-Mail Forwarding Service address changes with call sign
WRTC 2000 video available from ARRL
Japan's Ham Fair to feature special event station

+Available on ARRL Audio News

==========================================================

==>NORTHERN CALIFORNIA ARES ACTIVATES FOR "OREGON FIRE" EMERGENCY

Northern California members of the Amateur Radio Emergency Service this week
assisted with communication at the "Oregon Fire" emergency near the historic
town of Weaverville in Trinity County. The fire, named for nearby Oregon
Mountain, caused the temporary evacuation of around 1000 residents.

Sacramento Valley (North) Section Emergency Coordinator Dave Thorne, K6SOJ,
reports that more than a dozen trained volunteers were providing emergency
radio communication and other support for the American Red Cross and the
California Department of Forestry and Fire Protection.

Emergency Communication--or EMCOMM--stations were set up at Red Cross
evacuation centers near Weaverville and at the Red Cross Shasta Area Chapter
Headquarters. Team members--who are also registered with the CDF's
Volunteers in Prevention, or VIP, program--helped CDF officials at the fire
```

scene and at CDF facilities in Redding.

The fast-moving fire near Weaverville was reported around 2:30 PM on August 28. Evacuations ordered in the town of approximately 3,000 included the local hospital's patient population. Thorne said patients were transported via air or ground to hospitals in Redding. About a dozen homes were destroyed in the fire, believed caused by sparks from a motor vehicle. Evacuated residents were allowed to return August 29.

ARES operators successfully handled several out-of-state disaster welfare inquiries.

The ARRL Sacramento Valley Section's mutual aid plan was activated, and additional team members from Shasta and Tehama counties provided back-up support.

==>ARRL HELPS TO CLEAR THE AIR IN LINE NOISE CASES

The ARRL has successfully "run interference" in several recent cases where electric utilities were accused of causing problems for amateurs. One longstanding case in Tennessee involved suspected power-line interference affecting both the amateur bands and satellite dish reception. Other successful outcomes occurred in New Mexico and North Carolina, where amateurs had been plagued by line noise.

Paul Fulk Jr, N8ITF, of Springfield, Tennessee, had first complained to Cumberland Electric Membership Cooperative more than two years ago to get his noise situation resolved. After the company claimed it had done everything possible, the FCC's Riley Hollingsworth advised the utility in June to get in touch with the ARRL. The ARRL convinced Cumberland to secure the services of Mike Martin, K3RFI, who operates RFI Services in Traceys Landing, Maryland. Martin was able to pin down the problems in fairly short order.

"As of today all interference has been cured," Fulk recently reported to Hollingsworth. He credited Martin with "an exceptional job" in finding the interference sources.

Since coming to Headquarters in May, ARRL RFI Engineer John Phillips, K2QAI, has been working closely with the Cumberland and other suspected power-line-interference situations. He says even some experts are easily befuddled while trying to pin down interference sources, but that Martin's technique is nothing short of amazing.

"He's almost supernatural in his ability to find line noise," said Phillips, who attended Martin's RFI seminar earlier this year. Phillips says line noise usually turns out to be the result of something that's typically fairly easy and inexpensive to fix. "You just need to know the techniques," he said.

Another recent case referred to the ARRL was resolved without heavy FCC pressure. Mark Mandelkern, K5AM, of Las Cruces, New Mexico, had reported noise apparently coming from lines operated by the El Paso Electric Company.

"We merely wrote a letter to the CEO of El Paso Electric--with a copy to Riley Hollingsworth--and it quickly trickled down to a local manager who called me with a real sound of apprehension in his voice," Phillips recalled. Mandelkern wrote Hollingsworth August 14 that the company has been very cooperative and has begun work to completely rebuild a troublesome section of line.

In North Carolina, Jim Scholten, AD1V, had been frustrated by noise from Duke Power Company lines for several years. After a letter went out from ARRL to Duke Power--with a copy to the FCC--Scholten reported that linemen suddenly appeared at the suspect poles, and his noise problems abated. "It was impossible to make the power company do their job without you!" he wrote Phillips.

Amateurs suffering from interference believed to be emanating from power-generation or transmission facilities may contact John Phillips, K2QAI, rfi@... .

==>AO-40 GIVES EARTHLINGS ANOTHER SCARE

Sighs of relief were heard around the world as the 2.4-GHz S2 beacon aboard the AO-40 satellite reappeared August 28 after an ominous absence. The beacon failed to return as scheduled on Orbit 381 after the RUDAK connections shut off.

Gunter Wertich, DF4PV, who is equipped for moonbounce work, reported hearing normal telemetry blocks very weakly, however, so ground controllers were assured that the onboard computer had not crashed. Ground controller Stacey Mills, W4SM, suspected--correctly, as it turned out--that a solid-state matrix connection had not properly latched up and that DF4PV was hearing "bleed through" of the middle beacon through the IF matrix.

When the satellite came into view at Mills' Virginia location, he manually cycled the middle beacon-to-S2 transmitter connection off and on, "and the middle beacon popped back up."

According to Mills, the beacon glitch has occurred before and may be related to critical software timing issues. "This event will be studied further, and we will watch closely for several days to see if this occurs again," he said. If it does, ground controllers will try to make changes to the spacecraft's software to prevent a recurrence.

AO-40's S1 transmitter recently failed after only a short time of operation. Attempts to restore it have failed.

The RUDAK has been turned off temporarily, but the schedule will remain in place. For now, there will be no middle beacon and no RUDAK from MA=30 to 44. AMSAT-NA says AO-40 is entering a long period during which the Earth eclipses the sun near perigee. During September, eclipses will peak at 85 minutes. In order to conserve the batteries the S2 transmitter, including the middle beacon, will be off from MA 220 to 250. The on/off times will be adjusted as the eclipse periods change. Eclipse periods will continue well into June of next year.

==>FCC WANTS EXPLANATION FOR ALLEGED INTERFERENCE DURING DECLARED EMERGENCY

The FCC apparently wants to let the amateur community know that it intends to put teeth into its infrequent emergency declarations. The Commission has written William C. Dennison, K0VCD, seeking an explanation for interference it alleges the Springfield, Missouri, amateur caused to an emergency net after the FCC declared a general communications emergency on June 10.

In a letter to Dennison on August 16, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth called Dennison's apparent failure to abide by the emergency declaration "a serious breach of the amateur rules."

Because of severe flooding in Texas and Louisiana, the FCC had declared 3.873 and 7.285 MHz--plus or minus 3 kHz--off limits to all but flood emergency traffic. Agents say they monitored Dennison on 75 meters later that evening, operating in the vicinity of--and causing interference to--an emergency net. At one point, the FCC said, Dennison moved onto the net's frequency to challenge the net control station.

FCC agents at the Commission's High Frequency Direction Finding Facility in Columbia, Maryland, were maintaining a watch on 3.873 and 7.285 MHz when Dennison was heard. After determining that Dennison's signal--on 3.875 and subsequently 3.876 MHz--was interfering with the net, an FCC agent telephoned Dennison to make sure that he was aware of the communications emergency and requesting that he change frequency.

The FCC continued to monitor Dennison's signal "splattering onto the net" on 3.873 MHz, Hollingsworth said in his letter. Dennison is said to have commented on the air regarding the telephone call from the FCC, then moved to 3.873 MHz, where he contacted the emergency net control station to challenge the net's use of HF rather than 2 meters for the emergency traffic. Hollingsworth told ARRL that Dennison subsequently either moved away from the net's frequency or went off the air, and the net experienced no further problems.

Hollingsworth requested that Dennison, a General class licensee, respond to the letter within 20 days with a detailed explanation of his operation during the periods detailed in the letter.

==>ITU ADOPTS RECOMMENDATION ON AMATEUR QUALIFICATIONS

The International Telecommunication Union has adopted a recommendation that outlines basic qualifications for Amateur Radio operators worldwide. Recommendation ITU-R M.1544, Minimum qualifications of radio amateurs, states that minimal operational and technical qualifications are necessary for proper operation of an amateur or amateur-satellite station. It recommends that any person seeking an amateur license at least be able to demonstrate specific theoretical knowledge of radio regulations, radiocommunication methods, radio systems, radio emission safety, electromagnetic compatibility, and RF interference avoidance and resolution.

"The international Radio Regulations have long required that administrations take such measures as they judge necessary to verify the operational and

technical qualifications of any person wishing to operate an amateur station," observed International Amateur Radio Union Secretary David Sumner, K1ZZ. "In anticipation of changes that are likely to be made in the amateur and amateur-satellite service regulations at the next World Radiocommunication Conference, the new recommendation provides additional definition to these qualifications without reducing the prerogative of an administration to set its own standards."

Recommendation M.1544 came about as part of the IARU's multi-year effort to prepare for the 2003 World Radiocommunication Conference, where delegates will consider possible revision of Article S25 of the international Radio Regulations.

IARU President Larry E. Price, W4RA, said that establishing uniform minimum qualifications for Amateur Radio operators should help in the area of mutual recognition of amateur licenses for international roaming "and particularly for cross-border movement of amateur operators for disaster communications." Having the recommendation in place, he explained, makes it possible to maintain an ITU document on Amateur Radio operator qualifications within oversight of the ITU-R Study Group and avoids the cumbersome process of modifying Article S25 of the Radio Regulations.

ITU Recommendations are available from the ITU electronic bookshop: <http://ecs.itu.ch/cgi-bin/ebookshop>.--IARU news release

==>DO-SI-DO! WRTC 2002 US, UK TEAMS CHOOSE THEIR PARTNERS

World Radiosport Team Championship 2002 team captains from the US and the UK have chosen their partners. The WRTC 2002 Organizing Committee has announced US and UK pairings for the event, to be held next summer in Finland.

The 10 teams representing the US are (in alphabetical order by team captain) Ralph Bowen, N5RZ, and Rus Healy, K2UA; Doug Brandon, N6RT, and Andy Blank, N2NT; Daniel Craig, N6MJ, and Dave Mueller, N2NL; John Dorr, K1AR, and Doug Grant, K1DG; Bill Fisher, W4AN, and John Laney, K4BAI; Trey Garlough, N5KO, and James Brooks, N1YC; Steve London, N2IC, and Dave Hachadorian, K6LL; Dave Patton, NT1N, and Mark Obermann, AG9A; Bob Shohet, KQ2M, and Dan Handa, W7WA; and Randy Thompson, K5ZD, and Tom Frenaye, K1KI.

Team UK will consist of Andy Cook, G4PIQ, and Fred Handscombe, G4BWP.

Jointly organized by Contest Club Finland <http://www.qsl.net/ccf/> and the Finnish Amateur Radio League--SRAL <http://www.sral.fi>, WRTC 2002 will run from July 9 through July 16. The on-the-air portion of the event will be July 13 and 14, in conjunction with next year's International Amateur Radio Union HF World Championship <http://www.arrl.org/contests/announcements/rules-iaru.html>. In all, 50 teams of world-class contesters will compete for gold, silver and bronze medals in WRTC 2002 on and off-the-air events.

The 10 US team captains were elected by major contesting clubs. Captains then selected operating partners of their choice. Slots for two US "wild

card" teams at WRTC 2002 remain open for participants not proposed through the mainstream US club nomination process.

WRTC 2000 winners Dan Street, K1TO, and Jeff Steinman, N5TJ, are expected to defend their title at WRTC 2002. The K1TO-N5TJ duo also topped the field at WRTC 96.

The WRTC 2002 Organizing Committee recently announced that ARRL Executive Vice President David Sumner, K1ZZ, and Pekka Länsman of Finland will co-chair the judging committee for the event. Sumner was the chief judge for WRTC 2000 in Slovenia. For more information, visit the WRTC 2002 Web site <http://www.wrtc2002.org/.>

==>FORMER ARRL STAFF MEMBER BILL JENNINGS, K1WJ, SK

Former ARRL Headquarters staff member Ernest W. "Bill" Jennings, K1WJ, of Franklin, Connecticut, died August 26. He was 54. An amateur beekeeper, Jennings succumbed after being attacked and repeatedly stung by a swarm of his own bees.

Jennings came to ARRL Headquarters in 1976 as a communications assistant--shortly after getting his Extra ticket--and went to work in the Contest Branch. He was assistant communications manager when he left in 1984. "He was one of the kindest and funniest people I have ever met," said QST Publisher Mark Wilson, K1RO, who worked with Jennings in the early 1980s.

Others who knew Jennings from his days at ARRL Headquarters remarked on his irrepressible sense of humor. ARRL Field and Educational Services Manager Rosalie White, K1STO, recalled Jennings as "a super guy" who always tried to keep his fellow staff members in high spirits and smiling.

During his ARRL days, friends and colleagues recalled, a rubber chicken became Jennings' trademark gag. Those who knew him said Jennings frequently would wave the toy out his car window to acknowledge acquaintances he'd pass on the highway.

A lifelong Connecticut resident, Jennings was first licensed as WN1AHI in 1963 and was an ARRL Life Member. He graduated from Northeastern University in 1972 with a bachelor's degree in electrical engineering. Jennings was a DXCC Honor Roll and A1 Operator Club member.

Jennings authored the chapter "Basic Operating" that appeared in several editions of The ARRL Operating Manual. He also penned many of the contest writeups that appeared in QST during his ARRL Headquarters tenure. Most recently, Jennings was an engineer for Computer Science Corp.

According to The Hartford Courant, Jennings was working with one of the three bee hives he kept on his property when he was attacked. Jennings reportedly was wearing protective gear and was armed with a "smoker" to calm the insects, which apparently got underneath his clothing and headgear. Investigators have been trying to determine why the bees were so ferociously aggressive--a trait uncommon in typical European honeybees kept in New

England.

Survivors include Jennings' wife, Carol Smith, AJ2I, whom he'd met while both were on the ARRL staff. A memorial service was held August 31.

==>SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: The solar flux has been rising this week. Several new sunspots are visible, and flux values are up around 200 again. Average solar flux rose nearly 35 points this week. The latest projection shows solar flux rising above 200 over the next few days. Friday's flux is expected at 205, with 210 on Saturday and Sunday, and 205 on Monday and Tuesday.

Sunspot 9591 caused a big stir last weekend when a coronal mass ejection caused a sudden HF radio blackout. WWV reported a major solar flare occurring at 1635 UTC on August 25--said to be the largest solar flare since last April. A pair of new spots on the sun's northeastern limb pose a threat for more flares. Unsettled conditions and a geomagnetic storm are possible this weekend, making things a bit dicey for the All-Asia DX Contest (SSB).

Sunspot numbers for August 23 through 29 were 194, 187, 132, 139, 182, 189 and 136 with a mean of 165.6. The 10.7 cm flux was 169.7, 174.9, 199, 189.9, 192, 199.2 and 197, with a mean of 188.8. Estimated planetary A indices were 12, 4, 10, 12, 12, 15 and 9 with a mean of 10.6.

==>IN BRIEF:

* This weekend on the radio: The All Asian DX Contest (SSB), the CCCC Contest, IARU Region 1 Field Day (SSB), and the Michigan QRP Labor Day CW Sprint are the weekend of September 1-2. JUST AHEAD: the WAE DX Contest (SSB), the SLP Competition (SWL), the ARRL September VHF QSO, the North American Sprint, (CW) and the ARCI End of Summer PSK31 Sprint are the weekend of September 8-9. NOTE: The dates indicated in September QST ("Contest Corral") for the CQ WW RTTY Contest are incorrect. The contest is September 29-30 weekend. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Correction: A story in The ARRL Letter, Vol 20, No 31 (Aug 3, 2001), "FCC Scrutinizing Georgia ARRL VEC Exam Session" incorrectly reported the number of applicants at that session in Statesboro, Georgia. All nine applicants at the May 19 session qualified for a new license or upgrade.

* Sign up for ARRL Level II Emergency Communications on-Line course: There's still time to register for the ARRL Intermediate (Level II) Emergency Communications on-line course (EC-002). But, don't delay! The course begins the week of September 3. The Level I class is not a prerequisite. The Level II class offers new tools for those desiring to learn more about emergency communications and net procedures. Visit the ARRL Course Registration Page <https://www.arrl.org/forms/cce> to take advantage of this continuing

education training. Each class is limited to 50. New classes open every four weeks. Additional information is available at the ARRL Certification and Continuing Education Web site <http://www.arrl.org/cce>. Be sure to check out the links in the box at the right. Level II course manuals (order item 8519) now are available through the ARRL catalog <http://www.arrl.org/catalog/>. To learn more, contact Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* Tristani to depart FCC September 7: FCC Commissioner Gloria Tristani has announced that she will leave the Commission on September 7, 2001. "It has been a great honor to serve as a member of the FCC during this period," she said, adding that after nearly four years on the FCC, she believed it was time for her to move on. A Democrat and Clinton appointee, Tristani plans to return to New Mexico, where she previously served as a member and chairman of the State Corporation Commission. It's been speculated that Tristani might seek elective office from her home state--possibly the governorship or a seat in the US House. FCC Chairman Michael Powell thanked Tristani for "her outstanding contribution" to the FCC over the last four years and cited her leadership on issues such as the V-Chip and bringing communication services to underserved areas. Tristani's departure leaves three Republicans and one Democrat on the five-member FCC until President Bush appoints someone to complete her term, which expires in June 2003.--FCC and press reports

* ISS crew to resume ARISS school contacts after Labor Day: The International Space Station's Expedition 3 crew is scheduled to resume Amateur Radio school contacts after Labor Day. The first ARISS crew contacts had been penciled in for late August, but members of the crew, headed by Frank Culbertson, KD5OPQ, requested that ham radio activities be rescheduled while they got acclimated to their new home. The first scheduled contact is set for Tuesday, September 4, with Science Magnet Program students at Seabrook Intermediate School in Texas. A contact with Altamonte Elementary School in Florida has been tentatively set for the following week. The ARISS packet station reportedly is on the air, but still using the old TNC that does not reflect a call sign. A new packet TNC, correctly programmed with RS0ISS, now is aboard the ISS and scheduled to be installed by the Expedition 3 crew.

* Ham-sailor KB6TAM postpones return: David Clark, KB6TAM--who hopes to become the oldest person to sail solo around the world--will delay his departure from Trinidad at least until mid-November. Clark has been sitting out the Atlantic hurricane season there and had hoped to embark on the final leg of his round-the-world journey in time to reach Ft Lauderdale, Florida, on his wife's birthday, November 18. Lynda Clark said this week that her husband's been told by several sources that it's neither advisable nor safe to leave Trinidad until mid-November, so he's now setting his sights on a mid-December arrival in Florida. She said her husband has been spending some of his time in Trinidad working on a book about his round-the-world sail. Clark left Ft Lauderdale in December 1999. He nearly lost his life when his original sailboat sank last February off Cape Town, South Africa. Clark resumed his journey from South Africa in a new vessel last April.

* ARRL E-Mail Forwarding Service address changes with call sign: ARRL Information Systems Manager Don Durand reminds ARRL members who are planning to obtain new calls sign that their ARRL E-Mail Forwarding Service address will follow suit. So, plan ahead. The @... system is designed to provide only one e-mail forwarding address per member, based on your current call sign. Durand says the system will automatically update your ARRL E-Mail Forwarding System address to reflect your new call sign. ARRL membership records also are automatically updated using data provided by the FCC Amateur Service database. Visit the ARRL E-Mail Forwarding Service page <http://www.arrl.org/members-only/emailfwd.html> for more information.

* WRTC 2000 video available from ARRL: A half-hour video--"The Ham Radio Olympics"--produced by The Yasme Foundation and The Northern California DX Foundation--is available from ARRL. The video, produced and narrated by Dave Bell, W6AQ, recounts the events of World Radiosport Team Championship 2000 held in Bled, Slovenia, where teams of the world's top operators competed in on and off-the-air events. The 48-hour Olympic-style competition is a celebration of contesting and ham radio. "The Ham Radio Olympics" is available from ARRL in VHS videocassette format or as a Video CD for $19.95. Visit the ARRL on-line catalog <http://www.arrl.org/catalog/> for details.

* Japan's Ham Fair to feature special event station: Special event station 8J1HAM will be on the air during the Amateur Radio Festival 2001--better known as Ham Fair--August 31-September 2 in Yokohama, Japan. A special QSL card is available. For more information, contact the JARL Operation Section, oper@....

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; http://www.arrl.org. Jim Haynie, W5JBP, President

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb at http://www.arrl.org for the latest news, updated as it happens. The ARRLWeb Extra at http://www.arrl.org/members-only/extra offers ARRL members access to informative features and columns.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Fellow Hams ,

This to thank all the hams, who partcipated in the ganesh visarjan, activity, well this year with ganeshas grace, the activity passed of quite well, without any major casualties reported, and we also had hand in reporting abt 6 lost and found cases .

This year was also significant in a way , that we had tower of our own , especialy enmarked for HAMS , and MUMBAI AMATEUR RADIO SOCIETY was representing them .oh what a feeling was that operating from place of your own , one had to be there to feel that , for those who lost out on that oppurtunity , well there always another time , but yes u got to have that inclination for that.

I would also like to take oppurtunity , our sponsors , a) M/S JMP CONSTRUCTIONS , who donated us Rs.5000/-
b) Mr. sharma , for his personal donation of Rs . 500/-
c) vu3PAN , PRAVIN , whose company sponsored our identity cards to the tune of Rs.2500/-

Also , special thanks to vu2 HIT, huzefa , who did the wonderful job of catering , job well done .
and allso to vu2 zrs , zyros , for his fortune cookies , well it was his way of doing his bit .

As this event has been completed quite satisfactorily and successfully , i here by take oppurtunity to call for vounteers for upcoming, JOTA , event , on 20 th and 21st october , for which an invitation from , MAHARASTRA SCOUTS AND GUIDES , organisation , to be ther part of their activity , and help , scouts boys and guide girls go on air , using our transreceiver , wel past such activity , have shown how these , boys and girls , it up with their smiles , when they talk to their fellows scouts and guides from far of laces in india , and abroad , lets once again acheive this and make the boys and girls happy , and mind u they depend upon on us for this .

So , i here by request you to , come forward and volunteer , and please , let me know , of your availability, so that necessary , licensing can be applied for .

Hope to make , the JOTA , too a sucessful event .

73s vu2ugj
mukesh jaitley.

Fellow Hams ,

This to thank all the hams, who partcipated in the ganesh visarjan, activity, well this year with ganeshas grace, the activity passed of quite well, without any major casualties reported, and we also had hand in reporting abt 6 lost and found cases .

This year was also significant in a way , that we had tower of our own , especialy enmarked for HAMS , and MUMBAI AMATEUR RADIO SOCIETY was representing them .oh what a feeling was that operating from place of your own , one had to be there to feel that , for those who lost out on that oppurtunity , well there always another time , but yes u got to have that inclination for that.

I would also like to take oppurtunity , our sponsors , a) M/S JMP CONSTRUCTIONS , who donated us Rs.5000/-
b) Mr. sharma , for his personal donation of Rs . 500/-
c) vu3PAN , PRAVIN , whose company sponsored our identity cards to the tune of Rs.2500/-

Also , special thanks to vu2 HIT, huzefa , who did the wonderful job of catering , job well done .
and allso to vu2 zrs , zyros , for his fortune cookies , well it was his way of doing his bit .

As this event has been completed quite satisfactorily and successfully , i here by take oppurtunity to call for vounteers for upcoming, JOTA , event , on 20 th and 21st october , for which an invitation from , MAHARASTRA SCOUTS AND GUIDES , organisation , to be ther part of their activity , and help , scouts boys and guide girls go on air , using our transreceiver , wel past such activity , have shown how these , boys and girls , it up with their smiles , when they talk to their fellows scouts and guides from far of laces in india , and abroad , lets once again acheive this and make the boys and girls happy , and mind u they depend upon on us for this .

So , i here by request you to , come forward and volunteer , and please , let me know , of your availability, so that necessary , licensing can be applied for .

Hope to make , the JOTA , too a sucessful event .

Hello Friends,

You have received a clubgreeting from vu2jpn at clubgreetings.com.

To view your clubgreeting click here (http://www.clubgreetings.com/cgi-bin/grt/yourcard.asp?sendcardid=vu2970110601AM42491&id=1).
(Please make sure you're connected to the Internet to view your clubgreeting).

We do hope you enjoy your greeting & look forward to you visiting http://www.clubgreetings.com to reply to this greeting or to send one of your own to your loved ones. You can choose from one of the largest banks of more than 4000 greetings for all those special occasions, events or emotions. Register with us or subscribe to our newsletter & we?ll make sure you don?t miss any of those important birthdays, anniversaries, events, appointments or dates.

If you are new to the net or are uncomfortable using our site, visit the comprehensive ?help? section.
http://www.clubgreetings.com/index.asp?path=help/help.htm

You may also e-mail us at opcenter@... or contact us online, at http://www.clubgreetings.com/cgi-bin/contactus.htm

Warm regards,
The clubgreetings.com Team.
clubgreetings.com.. Say it with a club!

PS: If you have trouble viewing your clubgreeting, you can use the link provided below (Recommended for AOL Users).

==>FCC REGISTRATION NUMBER BECOMES MANDATORY IN DECEMBER

Get ready (again) for the FRN! Although the FCC has slipped the deadline
before, the Commission said this week that, starting December 3, 2001,
everyone doing business with the FCC--licensed or not--must obtain and use a
10-digit FCC Registration Number--or FRN. The FCC called the move "a first
step" toward streamlining fee collection and tracking. Many amateurs
registered with the Universal Licensing System (ULS) were assigned a
10-digit FRN by the Commission Registration System--or CORES--in a one-time
cross-registration last year and notified by mail.

Details to implement CORES for the Amateur Service are still being worked
out. Steve Linn of the FCC's Wireless Telecommunications Bureau said just
how CORES and ULS will work together remains up in the air. "CORES is not
replacing the ULS database," he explained, "but there are a lot of questions
as to how it is to be integrated." A final implementation with respect to
Amateur Radio is "yet to be determined," he said. Under the most likely
```

scenario, however, CORES registration will supplant ULS registration for those who do not already have an FRN.

Those without an FRN will be required to register and provide one before transacting business with the FCC, whether or not a fee is required. An individual does not have to hold an FCC license to obtain an FRN. The requirement to obtain one extends to applicants for an Amateur Radio license as well as to anyone required to pay a fee to the FCC, such as those applying for a vanity call sign. CORES registrants will be required to supply a Taxpayer Identification Number--or TIN--typically a Social Security Number (SSN) for an individual. The FCC says CORES information is not made public.

An FRN will not be needed to file comments in rulemaking proceedings. Filings that do require an FRN but don't include one will be rejected. The FCC has not yet proposed replacing the ULS Licensee Identification Number with an FRN; many amateurs already have both, and both numbers appear in FCC licensee records. The ULS continues to be available to new registrants.

The FCC began implementing CORES last year. The agency announced the adoption of its new CORES/FRN rules on August 31 and detailed the requirements in a Report and Order.

In its Order, the FCC sounded almost apologetic for imposing yet another set of numbers on licensees and applicants. "We realize that the manner in which our electronic systems have developed has results in a multiplicity of numbers, passwords and identifiers," the FCC conceded. The FCC said that once various electronic filing systems--such as ULS--incorporate CORES and FRN into their application process, "the need to maintain registration information in multiple systems will be eliminated."

The FCC said CORES makes provision for the registration of foreign nationals unable to obtain an SSN by providing the ability to register without one. The FCC has required that club stations obtain an assigned TIN when registering in the ULS. In an apparent about-face, the FCC's CORES Order states that unincorporated radio clubs registering in CORES should use the TIN/SSN of the license trustee. The ARRL has asked the FCC to clarify.

The on-line filing system and further information on CORES is available by visiting the FCC CORES Web page, <https://svartifoss2.fcc.gov/cores/CoresHome.html>. A copy of the FCC R&O is available on the ARRL Web site, <http://www.arrl.org/news/stories/2001/09/04/3/cores-ro.pdf>.

==>ISS EXPEDITION 3 CREW CONDUCTS ITS FIRST SCHOOL CONTACT

Youngsters at Seabrook Intermediate School in Texas got their new school year off to a banner start by speaking with the International Space Station via ham radio. The September 4 contact was carried out as part of the Amateur Radio on the International Space Station program. Crew Commander Frank Culbertson, KD5OPQ, took the NA1SS microphone for the first of what's hoped will be several school contacts during his crew's four-month stay.

Ten youngsters in grades six through eight from the school's Science Magnet Program took part in the contact. Among other things, the students wanted to know how life aboard the ISS compared with the space shuttle.

"The space shuttle is fairly small," Culberton said, comparing it to "a camper on the back of a pickup truck." The space station is huge in comparison. "It's like night and day between the two," he said. "For living in space, the space station is the way to go." Culbertson said he's enjoying weightlessness aboard the ISS.

One youngster wanted to know if the crew was able to shower aboard Space Station Alpha. "We don't actually take showers," Culbertson explained. "That would be pretty messy." He said the crew cleans up using a wash cloth and hot water, plus special soap and shampoo that does not need to be rinsed off but can just be wiped dry with a towel.

"It's been a real pleasure talking with you guys," Culbertson said as he signed off from NA1SS. The students reacted with loud applause.

Participating youngsters were enthusiastic about their ARISS experience. "That was just so cool talking to people over 210 nautical miles straight up," said Banks, a sixth grader. Seventh grader Adam, who hopes to become an astronaut, called it "a very eye-opening experience." Savannah, another sixth grader, said she hoped to get her ham ticket.

Coordinating the ARISS contact at the school was Bill Wood, W5OOD, with help from the Clear Lake Amateur Radio Club (K5HOU) and the Johnson Space Center Amateur Radio Club (W5RRR). Sandy Peck, the school's science coordinator, said some of her students are hoping to attend a licensing class in the spring.

The ISS crew is tentatively scheduled to speak next week with students at Altamonte Elementary School in Florida.

The ARISS program is a cooperative venture of ARRL, AMSAT and NASA. For more information, visit the ARISS Web site <http://ariss.gsfc.nasa.gov>.--Bruce Paige, KK5DO, provided some information for this report

==>CALIFORNIA ARES GROUP RESPONDS FOR BACK-TO-BACK BLAZES

In the wake of the "Oregon Fire" activation the last week of August, the Shasta County, California, ARES team barely had time to take a smoke-free breath before being activated again.

Shasta County Emergency Coordinator Drew Witham, W1SAR, reports that just as evacuation orders in Weaverville were being cancelled and the California Department of Forestry and Fire Protection was announcing near containment of the Oregon fire, another huge blaze broke out in the nearby town of Hayfork. By late in the day of August 31, the "Hyampom Fire" had scorched an estimated 450 acres and prompted another round of evacuations.

Shasta County and Trinity County ARES members responded quickly to shadow CDF and Red Cross team members. Witham said this enabled communication from the mountain communities back to CDF and Red Cross incident support centers

in Redding.

"Heavy smoke and difficult terrain made direct communication difficult," Witham said. "At times messages were being relayed via two monitoring stations using three different repeaters." Witham said that all of the public information coming from the CDF's multi-agency information center in Redding was relayed via ham radio.

Witham said he'd first learned of the "Oregon Fire" while on duty battling another blaze with his local volunteer fire department. Still in his wildland firefighter's yellow Nomex gear, he headed for CDF Headquarters in Redding, where DEC Dick Cloyd, WO6P, had responded to the CDF activation of ARES. They quickly formulated a plan, and Witham headed for the fireline 60 miles away in the mountains.

"Despite the distance, CDF and Red Cross personnel had communications within the hour, and support was continued as needed right through the holiday weekend," Witham said. ARES operators stood down September 3.--Drew Witham, W1SAR/SCARES

==>JUDGE BANS RADIO GEAR OWNERSHIP BY FLORIDA CBER

A Florida man who's facing thousands of dollars in federal fines for unlicensed radio operation and for interfering with local hams was sentenced to probation August 30 in state court. William Flippo was found guilty of criminal mischief, a Class 1 misdemeanor, during a jury trial last spring. Palm Beach County Judge Charles Burton further ordered Flippo--a Jupiter CBer known as "Rabbit Ears"--to dispose of any radio equipment now in his possession.

The sentence resulted from a charge that Flippo rammed his vehicle into the car of a local amateur, Ed Petzolt, K1LNC, of Hobe Sound. At the time of the incident two years ago, Petzolt was assisting an FCC agent in tracking down malicious interference attributed to Flippo.

Burton had sentenced Flippo to 120 days in jail but suspended incarceration in lieu of one year's probation with multiple conditions, including the ban on owning radio equipment. Flippo has 30 days to appeal his sentence. Burton further ordered that Flippo is to have no contact with Petzolt or with any member of Petzolt's family. He also may not own or possess any weapons, and he is required to reimburse Petzolt for lost wages. Flippo also has written a letter of apology.

Flippo, 58, already owes the US government $20,000 in fines for unlicensed operation, willful and malicious interference to Amateur Radio communications, and failure to let the FCC inspect his radio equipment. He's now scheduled to appear in federal court November 5 after his arrest last summer on additional charges. Flippo faces four counts of operating without a license and four counts of deliberate and malicious interference to a licensed service--Amateur Radio.

Flippo was taken into custody in July 2000 and has been free on $100,000 bond. As a condition of his release, US Magistrate Judge Ann E. Vitunac restricted Flippo's travel and prohibited him from making any radio transmissions.

The criminal charges going to trial in November cover alleged violations between June 1999 and April of last year. Each count carries a maximum penalty of one year in prison and a $10,000 fine. In January 2000, the FCC gave Flippo 30 days to pay the $20,000 already levied. The case was referred to the US Attorney after he failed to do so, and the interference complaints continued.

==>LOWER AMATEUR RADIO VANITY FEE IS EFFECTIVE SEPTEMBER 10

The FCC says the fee for a new or renewed Amateur Radio vanity call sign will drop to $12 on September 10. Applications received on or after that date will be subject to the new fee. The current vanity call sign fee is $14.

The FCC proposed the lower fee last March in a Notice of Proposed Rulemaking for the Assessment and Collection of Regulatory Fees for FY 2001 (MD Docket No. 01-76). The FCC has estimated that 8000 applicants will apply for vanity call signs in the current fiscal year.

Earlier this year, the FCC also put paper and electronic vanity call sign applications on an equal footing in terms of processing priority. The FCC used to give priority to electronic applications for vanity call signs.

FCC rules stipulate refunds for applicants who inadvertently overpay a regulatory fee. Applicants who determine that they overpaid a vanity fee may request a refund in writing. Requests seeking a "Vanity Fee Overpayment Refund" go to FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245. Refund requests should indicate the date of application, the total fee paid, and the total refund owed.

The FCC has posted its FY2001 fee schedule on the Web <http://www.fcc.gov/fees/2001wtbguide.txt>. For more information on applying for a vanity call sign, visit the FCC Amateur Radio Web page, <http://www.fcc.gov/wtb/amateur/VanityCS.html>.

==>ARRL WELCOMES KH6HU AS "BIG PROJECT" COORDINATOR

Gerald W. "Jerry" Hill, KH6HU, of New Haven, Connecticut, has been chosen as coordinator of the ARRL Amateur Radio Education Project--better known as "The Big Project." The educational initiative of ARRL President Jim Haynie, W5JBP, is aimed at providing a turnkey Amateur Radio curriculum, equipment and resources to middle schools.

"We're happy to have Jerry on board, and now we're anxious to get going," Haynie said. Hill started work September 4.

The aim of "The Big Project" is to improve the quality of education by employing educationally valid techniques involving Amateur Radio to teach a variety of subjects--including science, geography, language and speech. In

his new position, Hill will work with national educational organizations and ARRL educational advisors to achieve this goal.

Born and raised in the upper Midwest, Hill lived for 25 years in Hawaii and considers it home. Prior to his retirement in April, Hill served as career and technical education regional coordinator for the Department of Education in Kauai. His experience in the education field includes curriculum development, assisting teachers in implementing standards in the classroom, grant writing, and a school-to-work program.

A US Navy veteran, Hill is a member and past president of Kauai Amateur Radio Club and a long-time member of ARRL.

==>SOLAR UPDATE

Sunnyside Up Tad Cook, K7VVV, Seattle, Washington, reports: Compared to the previous seven days, average solar flux rose nearly 10 points this week, but average sunspot numbers dropped about the same amount. There seems to be quite a bit of new activity emerging. Earth is exiting a solar wind, which brought planetary A indices to 17 and 20 on Monday and Tuesday. The current forecast shows a planetary A index around 10 for the next 10 days, but, of course, this could change.

A new sunspot group could bring more flare activity and coronal mass ejections. The current outlook calls for solar flux to rise over the next few days, to 225 on Friday, and around 230 on Saturday through Tuesday. This could be an exciting fall DX season, and since solar activity will be declining, perhaps the best for years to come.

Sunspot numbers for August 30 through September 5 were 138, 142, 153, 141, 168, 168 and 175, with a mean of 155. The 10.7 cm flux was 199.2, 188.7, 184.1, 182.5, 198.7, 218.4 and 218.3, with a mean of 198.6. Estimated planetary A indices were 13, 16, 8, 7, 17, 20 and 10 with a mean of 13.

==>IN BRIEF:

* This weekend on the radio: The ARRL September VHF QSO, the North American Sprint, (CW) the WAE DX Contest (SSB), the SLP Competition (SWL), and the ARCI End of Summer PSK31 Sprint are the weekend of September 8-9. JUST AHEAD: YLRL Howdy Days, the QRP Afield event, the AGB NEMIGA Contest, the Air Force Anniversary QSO Party, the ARRL 10 GHz Cumulative Contest, the Scandinavian Activity Contest (CW), the Washington State Salmon Run, the North American Sprint (SSB) and the Tennessee QSO Party are the weekend of September 15-16. NOTE: The dates indicated in September QST ("Contest Corral") for the CQ WW RTTY Contest are incorrect. The contest is September 29-30 weekend. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Sign up for September Emergency Communications Level I on-line course! September registration for the Level I--Introduction to Amateur Radio

Emergency Communications on-line course (EC-001) will open Monday, September 10, at 4 PM Eastern Time. Two classes of 50 students will be processed during the week, and the on-line classes will begin the week of September 17. After 4 PM Monday--and until all seats are filled--the registration form can be found on the ARRL Course Registration page <https://www.arrl.org/forms/cce/>. Answers to most questions are on the ARRL Certification and Continuing Education Home page <http://www.arrl.org/cce> and the C-CE FAQ page <http://www.arrl.org/cce/faq.html>. To learn more, contact ARRL Certification and Conntinuing Education Coordinator Dan Miller, K3UFG, cce@.... Registration for Level II--Intermediate Amateur Radio Emergency Communications (EC-002) will re-open Monday, September 24.

* CQ Contest publishes its final issue: CQ Contest magazine has put out its last issue. Publisher Dick Ross, K2MGA, says the magazine, in publication for almost six years, has been losing money for the past several years, and the decision to cease publication with the October issue was strictly a business decision. The content for the ham radio niche publication will be absorbed into CQ. "CQ's dedication to the contest community is in no way diminished," Ross said in "A Message from the Publisher" in CQ Contest's final edition. All CQ Contest subscribers will be converted to CQ subscribers or have their CQ subscriptions extended on a dollar-for-dollar basis, starting with the November issue of CQ. In his "The Band Edge" editorial in the October issue, CQ Contest Editor Bob Cox, K3EST, says the magazine's legacy might be carried forward in the form of a Web publication to serve the contesting community. The demise of CQ Contest leaves National Contest Journal--published by ARRL--as the sole hard-copy magazine aimed at the Amateur Radio contesting community.

* Allen B. Harbach, WA4DRU, SK: The man who had made life a bit easier for fans of vintage Heath gear, Al Harbach, WA4DRU, of Melbourne, Florida, died August 15. He was 73. He was a Life Member of ARRL and had authored several items that appeared in QST. A native of Orchard Park, New York, and an engineer, Harbach was first licensed in 1948 as W2YNI. In more recent years, he became known to many as "Mr Heathkit" and a source of parts and information about Heath amateur gear. A longstanding member of the North Florida DX Association, Harbach was a prominent DXer, DXpeditioner and DXCC Honor Roll member with 351 entities. His contesting experience using SB-200s and SB-220s led him to design several modifications to those amplifiers that he offered as products. He also sold antenna hardware. Survivors include his wife, Pat. DX Engineering <http://www.dxengineering.com> has taken over Harbach's antenna hardware business. Jeff Weinberg, W8CQ, has assumed operation of Harbach Electronics <http://www.harbachelectronics.com/>.

* Former ARRL HQ employee died of heart failure, not bee stings: Authorities now say that Bill Jennings, K1WJ, a former ARRL Headquarters staff member, died of heart failure, not as a direct result of bee stings as earlier believed. According to The Hartford Courant, Jennings--a backyard beekeeper--was attacked August 26 by bees from an especially aggressive colony, but many of the stings occurred after he'd already died. "There is no evidence that his death is in any way related to being stung by bees," Associate Medical Examiner Arkady Katsnelson said in a statement. "The

stingers seen on his face are most likely from being stung after he died from his dysrhythmia, probably aggravated by the stress of the situation." The medical examiner's office said venom from the bee stings had not entered Jennings circulatory system, and it attributed his death to an enlarged heart and generalized cardiovascular disease. Jennings, who was 54, worked at ARRL Headquarters in the late 1970s and early 1980s. QST Publisher Mark Wilson, K1RO, and ARRL New England Director Tom Frenaye, K1KI, attended a memorial service for Jennings on August 31. Wilson and Frenaye worked with Jennings when he was at ARRL Headquarters.

* DXCC squared--the hard way! The late DXpedition team of Lloyd and Iris Colvin, W6KG and W6QL, worked, confirmed, and received DXCC from more than 100 DXCC entities. This fact was among those established as research continues on a biography of the Colvins by author, Jim Cain, K1TN, a former ARRL Headquarters staff member. "We've counted DXCCs from 109 DXCC countries so far," Cain said, "not including any of the dozens of DXCCs Lloyd and Iris achieved as individuals from California. Can anyone top this?" Iris Colvin died in 1998, and Lloyd Colvin died in 1993. The couple was most active between the 1960s and the early 1990s. Commissioned by the Yasme Foundation, the soon-to-be-published book will include a history of the Foundation and a biography of the couple. Cain invites additional information, photos, and anecdotes on the Colvins and on the early Yasme days in the 1950s. Send information to yasmebook@....

* High-altitude balloon flight carried ham radio payload: Edge of Space Sciences is declaring its latest balloon launch a success. The Denver, Colorado-based non-profit organization promotes science and education by exploring frontiers in Amateur Radio and high-altitude balloons. EOSS reports that its Flight 51 was launched and recovered successfully on August 25. Seven payloads were on board. "ATV from the balloon was spectacular," said Jack Roland, KE0VH. "It showed the balloon going through a snowstorm as it ascended through 25,000 feet, on its way to its maximum altitude of slightly more than 90,000 feet." Roland said the EOSS team had clear pictures throughout the entire flight. Future flights will incorporate a crossband repeater. For more information, visit the EOSS Web site <http://www.eoss.org/index.html >.

* West Kiribati T30ES operation on the air: Eric Griffin, N1JSY, will be on the air for the next 18 months from the island of Butaritari in West Kiribati as T30ES. The T30ES operation is not a DXpedition. Griffin is a Penn State grad who's in the Peace Corps. His T30ES adventure is being supported by the Candlewood Amateur Radio Association and the Bethel Educational Amateur Radio Society, both of Connecticut, whose members donated the various elements for the T30ES station. At last report, one antenna was up and N1JSY had made a few regional QSOs as the station undergoes its shakedown cruise. T30ES will be active as his schedule permits. He's running 100 W with battery power and will operate only during his non-work hours. QSL to PO Box 3441, Danbury CT 06813. For more information on T30ES, visit The Kiribati Connection Web site, <http://people.mags.net/boem/kiribati1.htm>.--Peter Kemp, KZ1Z

* K3RXK to be digital conference banquet speaker: Tony Curtis, K3RXK, will be the banquet speaker at the 20th annual ARRL and TAPR Digital Communications Conference, Saturday, September 22 in Cincinnati. His topic will be "40 Years of Amateur Radio in Space: Where We've Been, Where We Are, Where We're Going." Curtis notes that OSCAR-1 was launched December 12, 1961. An ARRL Life Member, Curtis has written dozens of books about space, astronomy, computers and electronics. He is editor of Space Today Online <http://www.spacetoday.org>. Full DCC information, a registration form, and hotel information may be obtained by contacting Tucson Amateur Packet Radio, 972-671-TAPR (8277); fax 972-671-8716; e-mail: tapr@...; http://www.tapr.org.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; http://www.arrl.org. Jim Haynie, W5JBP, President

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb at http://www.arrl.org for the latest news, updated as it happens. The ARRLWeb Extra at http://www.arrl.org/members-only/extra offers ARRL members access to informative features and columns.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@qth.net (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

MUMBAI AMATEUR RADIO SOCIETY

Dear Friends,

I am pleased to inform you that our MARS VHF repeater is fully functional and performing very well.

Initially we had many teething problems such as Pagers, Chinese Phone QRM etc.. But now all those problems are sorted out and we are practically having no QRM on the repeater.

The Frequency for the repeater is 144.620 Mhz with a + shift of 600 Khz. [152.220]. Another added feature to the repeater is the CTCSS Encoder. The Repeater sends out a Sub Audio Tone of 88.5
along with its transmission.

All Hams who have the CTCSS [Continuous Tone Coded Squelch System] Decoder facility on their Rig can avail this option.

For people who are not aware of CTCSS , let me clarify, Once you have CTCSS Decoder ON on your rig
on repeater frequency, [144.62 Mhz] , you will not hear any station on this frequency which is not transmitting a Sub Audio Tone of 88.5. Since the Repeater is already sending this tone Your squelch will open when the repeater transmits and you will be able to hear , but will remain close all the other time.

Since the Pagers, Chinese Telephones don't transmit this Sub Audio Tone of 88.5, they cannot penetrate your defence system. You may see the signal on your Bar Graph but you will not receive any audio.

This is an excellent option for all the hams using the repeater, Specially the ones who have their sets ON all the time, they will be totally spared from the Pager and other QRM. Although this system works very well, it does have a flaw, Suppose a weak Ham signal triggers the repeater and at the same time the Pager message is also fired with a strong signal, it may over ride the Ham signal and you may hear the pagers, but this can happen on a very rare occasion, most of time you should get a clean reception.

Please note that this does not mean that the people who don't have CTCSS on their Rig cannot use the repeater. They can continue just like before without any problem [that's the beauty of this system]. In fact you would have never come to know about the facility if I would have not told you so, because the Sub Audio Tone of 88.5 cannot be hear at all.

This is surely not the 100% solution to the QRM problem, but I estimate is will do good for about 90% of
the time.

Also note that most of the latest Rigs have this CTCSS facility built in like Yaesu 50R, 51R, Kenwood TH-78A, TH-79A, ICOM Base IC-2100 etc... some may require an add on chip.

Anyone requiring further clarifications in this matter may contact me directly at
vu2nlf@....in
or on L.L. 3866312.

A guy walks into a pizza joint in America and orders for a pizza.

The cashier asks him, "Sir, how many pieces should I cut your pizza into--6 or 8?"

The guy replies, "Cut it into 6 pieces, I can`t eat 8!"

The ARRL Letter
Vol. 20, No. 37
September 14, 2001
***************

IN THIS EDITION:

* +Amateurs respond to terrorist attacks
* +ARRL president expresses pride in ham radio
* +Hams among the missing at World Trade Center
* +Wildfires stretch ARES resources in California
* +New ARISS antennas to launch in November
* +Hurricane Watch Net activates for Erin
* Solar Update
* IN BRIEF:
This weekend on the radio
+North American Sprint (SSB) cancelled
+Johnston Island K3J DXpedition on the air
+Kodiak Star launch delayed as a result of terrorist attacks
W9GFZ special event postponed
It's business as usual for AMSAT-NA Symposium and Annual Meeting
2001 ARRL/TAPR Digital Communications Conference to proceed on schedule
DXCC Annual List deadline modified
Former HQ staff member recovering from surgery
Hiram Percy Maxim Award presented at Missouri convention
Wisconsin PRB-1 drive appears to be overcoming sponsor's resignation
Lansing, Michigan, HamFair canceled
Ward Silver, N0AX, to edit QST "Contest Corral"

+Available on ARRL Audio News

==========================================================

==>AMATEUR RADIO RESPONDS IN FORCE IN WAKE OF TERRORIST ATTACKS

Some already are calling it "Amateur Radio's Finest Hour," as volunteers
answer the call to assist in ongoing relief and recovery operations in New
York City, Washington, DC, and western Pennsylvania in the wake of terrorist
attacks on the US September 11. The need continues for operators to assist
over the long haul, however. Current estimates suggest hams may be needed
for a month or longer in the New York City area, and for at least the next
two weeks in Washington, DC.

Along with most other federal agencies, the FCC closed its offices and sent
its employees home following the attacks. The FCC issued no emergency
declarations nor other special instructions to the Amateur Radio community.
```

The ARRL advised amateurs to stay alert to instructions from local authorities.

New York City-Long Island Section Emergency Coordinator Tom Carrubba, KA2D, reports that hams have been supporting emergency officials and the American Red Cross relief and recovery effort. Amateurs have been staffing several Red Cross shelters in addition to a staging/National Disaster Medical System center, various Red Cross units, and the Greater New York City American Red Cross Headquarters as well as the New York City Office of Emergency Management.

Carrubba says the telephone system in lower Manhattan continues to be problematic because of the high call volume. "American Red Cross communications are overloaded, and traffic from the shelters is coming into the New York City net at a rapid pace," he said. "The Amateur Radio ops are doing a great job under very difficult and strange conditions, but this is what they have trained for; they are getting it done well."

Red Cross Communications Officer Jay Ferron, N4GAA, agreed. "The Amateur Radio community has come out very big and very strong," he said, adding that local clubs and repeater groups have volunteered gear, frequencies and operators.

New York City District Emergency Coordinator Charles Hargrove, N2NOV, has expressed his appreciation to the amateur community. "Thank you for all the support and well wishes," he said. "This is a difficult time for all of us. We appreciate all the amateurs who have volunteered their time and equipment."

Carrubba also cited the ongoing efforts of Guy Richman, KC2AYG, who has been coordinating net controls for the ARES nets, and Manhattan ARRL EC John Kiernan, KE2UN.

Carrubba is seeking additional volunteers from the Greater New York City region. He has asked out-of-state volunteers to "stand by until we can provide for your safety and comfort." Volunteers need a VHF (2-meter) or, preferably, a VHF/UHF (2-meter/70-cm) mobile radio, power supply and cables, and mobile/portable mag-mounted gain antenna. Carrubba says hand-helds are not sufficient to deal with the difficult operating conditions.

"Operators are still needed," he said, but stressed, "This is a difficult assignment."

Amateurs are working two 12-hour shifts per day, 8 AM to 8 PM and 8 PM to 8 AM, "plus or minus three or four hours, mostly plus," Carrubba said. Additional information is available on the ARRL Web site <http://www.arrl.org>.

At the scene of the Pentagon attack near Washington, DC, Virginia Section Emergency Coordinator Tom Gregory, N4NW, reports an "upbeat" crew of about two dozen amateurs is staffing six Amateur Radio stations in the immediate vicinity of the Pentagon. "What shocked me the most was the devastation you

can see right there, 100 feet from the building," Gregory said. "The destruction is total."

The ARES operation is providing logistical support between the Salvation Army's relief and recovery effort on site and the agency's Arlington headquarters. The Salvation Army has deployed several mobile canteens and a feeding unit to serve military and civilian emergency personnel assigned to the recovery operation.

"What we're finding is that communication is very difficult because of the tremendous amount of noise from the construction-type equipment and the generators providing power for the lights and support staff," Gregory said. Because of the noise level, operators are being rotated frequently in and out of the immediate vicinity of the attack. "There's the emotion of it, and there's the tremendous amount of noise, and it's very grating on you because you can hardly hear the radio to communicate," Gregory explained.

Gregory described the entire area as "very crowded with people" inside and outside the Pentagon. "People and equipment cleaning up, finding bodies, finding plane parts, firefighters still checking for hot spots, hoses, equipment," he said. "The damage to the building looks worse when you are right next to it than it does on TV."

"I found that it took me a few minutes to realize the gravity of what was going on and the importance of what we hams are doing in our own small way to help out," Gregory said. "The devastation of that building is awesome, and it puts things in perspective and it certainly made me proud to be an Amateur Radio operator and serve the people of the United States by offering the support we could."

The Pentagon ARES operation continues to seek volunteers. "Because of the immensity of the thing, we're trying to have six amateurs on duty at all times," he said. "We need 20 volunteers every day for at least two weeks." Volunteers should e-mail Tom Gregory, N4NW, at n4nw@....

Gregory emphasized that Pentagon site security is extremely tight. All ham volunteers must have a photo ID issued by a government entity to the secured area. "The FBI is handling issuance of IDs for access to the secured area and is doing a complete NCIC check before a photo ID is issued," Gregory said.

At the so-called "fourth" plane crash site in rural Somerset County western Pennsylvania, Kevin Custer, W3KKC, reports a busy scene as the investigation continues. Custer arranged preliminary repeater communication into and out of the crash site on Tuesday to help the Red Cross, Salvation Army, Pennsylvania State Police, the FBI and other state and federal agencies on the scene.

Custer said the investigation could continue for several weeks. "At this time we are preparing for the possibility of family members coming to the crash site--or close by," he said.

Montgomery County, Maryland, Deputy RACES Officer John Creel, WB3GXW, observed that while the enormity of the attacks is bound to touch the amateur community directly or indirectly, he has seen nothing but professionalism among the responding operators in his area. Creel advised amateurs to "just be prepared," and he echoed the sentiment of many that the events of September 11 "will be with us for the rest of our lives.

More detailed and updated information on Amateur Radio's involvement in the disaster relief and recovery efforts is available on the ARRL Web site <http://www.arrl.org>.

==>ARRL PRESIDENT PRAISES AMATEURS' RESPONSE

ARRL President Jim Haynie, W5JBP, has expressed his deep appreciation to amateurs throughout the world who have sent messages of condolence and support. Haynie also praised the actions of Amateur Radio volunteers.

"The shock and horror of yesterday morning's events are still fresh in our minds," Haynie said the day after the September 11 terrorist attacks. "Radio amateurs in New York City and elsewhere around the country are doing everything they can to support the authorities in locating and assisting victims. We know that there are many among us who have been touched personally by these tragedies, but there is comfort in knowing that we are not alone in our grief."

"Never have I felt more strongly about what a great privilege it is to be a part of the extraordinary global community of Amateur Radio," Haynie concluded.

Messages of support arrived throughout the week at ARRL Headquarters from International Amateur Radio Union member societies and from individual amateurs around the world. Japan Amateur Radio League President Shozo Hara, JA1AN, expressed "great shock and dismay" at the attacks in New York and Washington and offered "heartfelt condolences to the victims and families of the victims" as well as any assistance JARL could offer. Deutscher Amateur-Radio Club Managing Director Bernd Haefner, DB4DL, relayed similar sentiments. "At this horrible time, we all are Americans," he wrote.

ARRL Vice President Kay Craigie, WT3P, noted that, on a day when many Americans were rushing home to be with their families, many radio amateurs were assisting in the emergency response. "Compared to the sacrifices by emergency responders in New York City and at the Pentagon, it was a small thing, yet a thing that should not go without notice."

==>AMATEURS AMONG THE MISSING IN WORLD TRADE CENTER ATTACK

At least four Amateur Radio operators are among the many still missing in the aftermath of the September 11 attack on the World Trade Center in New York City. The attack also destroyed the major TV and radio transmitting site atop one of the twin towers.

The hams reported missing so far include:

* Steven A. "Steve" Jacobson, N2SJ, 53, of New York City, a transmitter engineer for WPIX TV, and an ARRL member.

* William V. "Bill" Steckman, WA2ACW, of W Hempstead, New York, a transmitter engineer for WNBC TV. He was well know in the NYC area and ran a number of repeaters from the World Trade Center, most notably the 434 MHz ATV repeater.

* Robert D. "Bob" Cirri Sr, KA2OTD, 39, an ARRL member from Nutley, New Jersey and the ARRL District Emergency Coordinator for Hudson County. A Port Authority police officer, Cirri was on the job helping to evacuate workers from the building when it collapsed.

* Michael G. Jacobs, AA1GO, 54, an ARRL member from Danbury, Connecticut. Jacobs worked at Fiduciary Trust Company International, which had offices in the World Trade Center.

The collapse of the World Trade Center brought down the master TV transmitting antenna that served all but one television station in New York City, as well as several radio stations and amateur repeaters. "The broadcast community is in absolute shock," said Hudson Division Vice Director Steve Mendelsohn, W2ML, who works for ABC News. "We all knew transmitter engineers, we all knew people who worked up in those towers near those big television transmitters, and they're gone."

Mendelsohn said many viewers in the Greater New York City Area who are not on cable can only see WCBS, channel 2, which maintains its transmitter site on the Empire State Building. WCBS has offered assistance and space to help the other stations get back on the air from its site, he said.

"None of the other transmitters exist anymore. They're in the rubble along with the master antenna system, hundreds and hundreds of two-way radio system antennas, and boxes and, of course, untold thousands of people who perished."

There was cause for rejoicing in the case of another amateur who worked in the World Trade Center. Rob Nall, WV0S, reports that his friend, Herman Belderok, Jr, KB0EEB, managed to get out of the building just minutes before the structure collapsed.

==>WILDFIRES STRETCH NORTHERN CALIFORNIA ARES TEAMS TO THE LIMIT

The wildfire rampage in Northern California took a toll on Amateur Radio Emergency Service resources there. Sacramento Valley-North Section Emergency Coordinator Dave Thorne, K6SOJ, says maintaining 24-hour-per-day operations at evacuation centers and at the Red Cross chapter in Chico, plus providing field operators and HQ stations for the California Department of Forestry and Fire Protection exhausted the pool of trained ARES operators.

"As of today, things are beginning to de-escalate, and our ARES members are being released as appropriate," Thorne said September 10.

The latest major wildfire erupted September 6 north of Lake Oroville in Butte County. Dubbed the "Poe Fire," it consumed more than 7500 acres,

destroyed 27 homes, and prompted the evacuation of more than 400 residences, according to news reports. Emergency Coordinator Steve Kaps, N6NPN, says that the Butte/Glenn County ARES team was activated right away by the county emergency manager to provide emergency and auxiliary communication for the American Red Cross. Kaps said ARES also assisted CDF when its normal communication channel became overloaded.

The Sacramento Valley Section mutual aid plan was activated last Friday, September 7, but ARES teams from nearby Shasta County already were involved in their own fire-related activity and unavailable. Thorne says ARES operators from Tehama County and from as far away as Siskiyou County were dispatched, and some remained on duty earlier this week.

"These dedicated volunteers are to be commended," he said. "For some it was over a 300 mile round trip, and they pay their own expenses."

The Poe Fire was the fifth major wildfire this year to hit the Sacramento Valley-North's eight-county service area.

==>ARISS ANTENNAS MOVE CLOSER TO LAUNCH

New Amateur Radio on the International Space Station antennas could be in place by early 2002. In addition, plans now call for splitting the current initial ARISS equipment into separate ham stations aboard the ISS--initially 2 meters in one location and 70 cm in the second.

ARISS Chairman Frank Bauer, KA3HDO, said the new flight antenna systems were shipped earlier this month to Johnson Space Center for a bench review. "We will be having our final safety review with NASA on September 18," he said. He said prototype units already have been tested to see if they withstand the temperature extremes and "thermal shock" of space. Technical testing for SWR and pattern also has been completed.

The new antennas--designed to cover HF, VHF, UHF, and the 1.2 and 2.4 GHz bands--are expected to be transported to the ISS in late November aboard the shuttle Endeavour on the STS-108 mission. The new antennas could be installed during a space walk early next year after the Expedition 4 crew is aboard. Bauer said training to install the new antennas is under way.

Once the appropriate gear is in place, ARISS operation could extend from HF through 2.4 GHz. The HF antenna is a 2.5-meter long flexible tape. Bauer thinks it will definitely work on 10 meters and speculated that it might work on 15 or 20 too. The new antennas will be arrayed around the perimeter of the ISS Russian Service Module--or Zvezda.

Bauer says a 2-meter station will remain in the Russian "Functional Cargo Block"--also called the FGB or Zarya--and will use the existing Russian antennas now used for ARISS. Once the new antennas have been deployed, a second station will be set up in the Service Module. In the short term, that will be a 70-cm station, but in the long term, the Service Module station will support expanded capabilities.

The new antenna systems were developed by the US, Italian and Russian ARISS partners. Bauer concedes the hardest part of the process has been getting the new antennas space-ready. "I want to thank all the individuals from around the world who have enabled the ARISS team to get this far," he said. "It has been a challenging effort. Your persistence and can-do spirit enabled the antenna systems to go from just a dream to reality."

Visit the ARISS Web site, <http://ariss.gsfc.nasa.gov>.

==>HURRICANE WATCH NET ACTIVATES FOR ERIN

The Hurricane Watch Net and operators at W4EHW at the National Hurricane Center in Miami activated for 11 hours over the September 8-9 weekend to keep an eye on Hurricane Erin. The storm, which had threatened Bermuda, was still a Category 1 hurricane at week's end.

The Hurricane Watch Net and W4EHW activated September 9 at 1100 UTC and terminated operations at 2200 UTC after the storm had passed east of Bermuda with no significant impact.

W4EHW Assistant Amateur Radio Coordinator Julio Ripoll, WD4JR reports that W4EHW received many live surface reports from Bermuda. W4EHW operated on the Hurricane Watch Net on 14.325 MHz as well as on the Bermuda Emergency Net on 14.275 MHz. Ripoll and the Hurricane Watch Net's Mike Pilgrim, K5MP, reported that up to a half dozen Bermuda hams provided storm data, including measured weather surface reports and visual observations of the surf.

The storm, with winds at 80 MPH, moved into the Atlantic. By week's end, forecasters were calling for large swells affecting the US East Coast and the Canadian Maritimes.

The Hurricane Watch Net <http://www.hwn.org> activates 14.325 MHz whenever a hurricane is within 300 miles of projected landfall or becomes a serious threat to a populated area.

==>SOLAR UPDATE

Solar sage Tad Cook, K7VVV, Seattle, Washington, reports: Average daily sunspot numbers were up more than 86 points this week, and average solar flux rose 39 points. The daily sunspot number peaked on Sunday at 291, the highest value since April 1. Solar flux peaked on Tuesday at 249.7, also the highest since April 1. Solar flux is expected to level off over the next few days, to 235 on Friday, 225 on Saturday and Sunday, and around 215 on Monday.

There have been several coronal mass ejections since September 11, but they were not Earth-directed. Geomagnetic conditions have been quiet this week, but on Thursday we experienced a rise in activity. On Friday the predicted planetary A index is 20, and conditions are expected to be unsettled after that.

Sunspot numbers for September 6 through 12 were 204, 288, 281, 291, 217, 180 and 228, with a mean of 241.3. The 10.7 cm flux was 222.2, 226.1, 249.5, 236.2, 244.5, 249.7 and 235.1, with a mean of 237.6. Estimated planetary A

indices were 8, 6, 7, 7, 5, 9 and 13, with a mean of 7.9.

==>IN BRIEF:

* This weekend on the radio: YLRL Howdy Days, the QRP Afield event <http://www.qsl.net/wq1rp/qrpa2001.htm>, the AGB NEMIGA Contest, the Air Force Anniversary QSO Party, the ARRL 10 GHz Cumulative Contest, the Scandinavian Activity Contest (CW), the Washington State Salmon Run, and the Tennessee QSO Party are the weekend of September 15-16. JUST AHEAD: The CQ WW RTTY Contest, the Scandinavian Activity Contest (SSB) and the Radio Club Panama XXX Anniversary Contest are the weekend of September 22-23. NOTE: The dates indicated in September QST ("Contest Corral") for the CQ WW RTTY Contest are incorrect. The contest is September 29-30 weekend. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* North American Sprint (SSB) cancelled: The North American Sprint (SSB) sponsored by NCJ and scheduled for September 16, 0000-0400 UTC, has been canceled. "This is being done out of respect to all affected by this week's events and also to eliminate any possibility of interference from the contest with emergency communication that may be going on," said SSB Sprint Manager Jim Stevens, K4MA.

* Johnston Island K3J DXpedition on the air: The K3J DXpedition to Johnston Island got on the air September 13 and will remain on the island until September 18. The team had been held up in Hawaii after airline travel was suspended.

* Kodiak Star launch delayed as a result of terrorist attacks: The Kodiak Star launch that will carry three Amateur Radio payloads--including the US Naval Academy's PCSat APRS satellite--into space from Kodiak, Alaska, has been delayed due to travel disruptions caused by the recent terrorist attacks. NASA says the launch has been rescheduled for September 20, at 0100 UTC (9 PM Eastern, September 19). The Kodiak Star mission comprises four small satellites that will be launched aboard a Lockheed Martin Athena 1 rocket. The launch will mark the first orbital launch from the new Kodiak Launch Complex in Alaska. PCsat is a 1200-baud APRS digipeater to be accessible using H-Ts and mobiles. It will operate on 145.825 MHz. Starshine 3 is a mirror ball with AX.25 9600-baud telemetry on 145.825 MHz, and Sapphire has 1200-baud AX.25 telemetry and a voice replay on 437.1 MHz.

* W9GFZ special event postponed: Due to this week's terrorist attacks, the National Radio Astronomy Observatory Amateur Radio Club has postponed the W9GFZ special event operation scheduled for this weekend, September 15-16, from the NRAO in Green Bank, West Virginia. The special event will be reschuled for a later time.--Dave Finley, N1IRZ

* It's business as usual for AMSAT-NA Symposium and Annual Meeting: AMSAT-NA President Robin Haighton, VE3FRH, says he and the AMSAT-NA Board of Directors have agreed that the AMSAT-NA Symposium and Annual Meeting in

Atlanta the weekend of October 5-7 will proceed on schedule. "At present we do not see any reason why any changes should be made," Haighton said, "and we totally agree with those who believe that 'business should proceed normally as soon as possible, to show that we will not be beaten by a bunch of terrorists'." Haighton said the more who attend in Atlanta, "the bigger and stronger will be that message." Haighton invited AMSAT members and nonmembers to attend. "I look forward to seeing a record crowd!" More information and a registration form is available on the AMSAT-NA Web site, <http://www.amsat.org>.

* 2001 ARRL/TAPR Digital Communications Conference to proceed on schedule: The 20th ARRL and TAPR Digital Communications Conference will be held as scheduled September 21-23 in Cincinnati. The annual gathering provides an international forum for radio amateurs involved in digital communication, networking, and related technologies to meet, publish their work, and present new ideas and techniques for discussion. Sessions at the beginner, intermediate, and advanced levels will be offered in selected areas of digital communication. Tony Curtis, K3RXK, will be the banquet speaker Saturday evening. Full DCC information, a registration form, and hotel information may be obtained by contacting Tucson Amateur Packet Radio, 972-671-TAPR (8277); fax 972-671-8716; e-mail: tapr@...; http://www.tapr.org.

* DXCC Annual List deadline modified: Effective immediately, all applications for DXCC credit that are postmarked by September 30 will be eligible for inclusion in the DXCC Annual List that will appear in the 2001 DXCC Yearbook. It's not necessary that applications actually be received at ARRL Headquarters in Newington by that date. All submittals must show clear evidence of a postmark or posting date. This change should alleviate most problems arising from recently reported mail delays. Applications will be listed on the ARRL Web site DXCC page <http://www.arrl.org/awards/dxcc/appstatus.html> as they are received.

* Former HQ staff member recovering from surgery: Former ARRL Headquarters staff member Bob White, W1CW, is recovering from heart surgery at a Tampa, Florida, hospital. An ARRL Life Member, White, 81, worked at Headquarters for 25 years, primarily managing the DXCC program. He's also a CQ DX Hall of Fame member. His wife Ellen, W1YL, and their son Jim, K4OJ--also former HQ staffers--have expressed their thanks for the outpouring of e-mail and get well wishes. thank everyone for the outpouring of e-mail and get-well wishes. "My father is pleased by the number of e-mails he has received from hams around the world," said Jim White. "This has been very helpful to him." He said his father remains in good spirits. His prognosis is for several weeks' post-operative recovery at the hospital before being allowed to return home. E-messages can be sent to his home care of Ellen White, w1yl@....

* Hiram Percy Maxim Award presented at Missouri convention: At the recent Missouri State Convention, ARRL Midwest Division Director Wade Walstrom, W0EJ, presented 2000 Hiram Percy Maxim Memorial Award winner Thaddeus W. Huff, KC0AQG, with a plaque and a check for $1000. Huff, 19, lives in

Clarence, Missouri, and attends Moberly Area Community College, where he majors in criminal justice. Huff is active in community development and has spearheaded several programs to benefit his community, including an exhibit at the Clarence Community Resources Exposition to demonstrate Amateur Radio and emergency communications. A member of the Amateur Radio Emergency Service, he has organized severe weather spotting courses for Macon and Shelby counties. The Hiram Percy Maxim Award goes each year to a radio amateur under the age of 21 whose accomplishments and contributions are of the most exemplary nature within the framework of Amateur Radio activities. The award was established in 1936, and formal nominations come from section managers.

* Wisconsin PRB-1 drive appears to be overcoming sponsor's resignation: Wisconsin's PRB-1 bill, Assembly Bill 368, appears to be retaining its momentum despite the recent resignation of the measure's Assembly sponsor, Rep Joan Wade of Montello. Wade, who resigned August 31, had introduced AB-368 earlier this year. The bill now will be in the hands of Rep Luther Olsen of Berlin. AB-368 was voted out of committee this week on a 5-1 vote; a vote by the Assembly could happen when the legislature reconvenes in October. A public hearing on the bill was held in May by the Committee on Urban and Local Affairs. The bill's Senate sponsor will be Sen Fred Risser. If AB-368 gets to the Senate, it will be referred to a committee, and another public hearing will be held. Information on how to contact Wisconsin lawmakers is available via the Badger State Smoke Signals Web site, <http://www.bsss.org.>.--Badger State Smoke Signals

* Lansing, Michigan, HamFair canceled: The 31st annual HamFair <http://www.qsl.net/lcdra/hamfair.org.html> in Lansing, Michigan, scheduled for October 14, has been cancelled. The event, sponsored by the Central Michigan Amateur Radio Club and Lansing Civil Defense Repeater Association, was called off because of lagging ticket sales and vendor booth reservations. For more information, contact J. Ervin Bates, W8ERV, w8erv@...; 517-202-6229.

* Ward Silver, N0AX, to edit QST "Contest Corral": Ward Silver, N0AX, will take over the reins of the QST "Contest Corral" department from George Fremin, K5TR. The change is effective with the November 2001 issue of QST. Licensed since 1972, Silver--who's 46--is a Life Member of ARRL and the Western Washington DX Club. A resident of Vashon Island near Seattle in Puget Sound, Silver is married and the father of twin boys, KD7DQO and KD7FYX. "My favorite contests are CW Sweepstakes, CW Sprint, and CQ WW CW--you might detect a slight inclination towards CW on my part," he says. He's especially interested in QRP (low-power) operating but also likes participating in multiop groups, such as W7RM and K3LR. Members may contact Ward Silver, N0AX, via e-mail, n0ax@....

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

337. Happy Birthday - VU2NHR

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

You may be aware that we have received a generous donation by our Member Kiran Padiyar [VU3KPL] by way of subscription to the ARRL Membership. QST magazine subscription is a part of the membership. Till date we have already received 4 issues of the QST Magazine. (June,July,August,September 2001).

Unfortunately not many members are taking advantage of this subscription. (Hardly 5 to 6 members are making use of it)
this could be for possible 2 reasons, One that members are not really aware of it, second they don't know how to access the magazine.

During the Managing Commitee meeting held on 17th Sept 2001, it has been resolved that the magazine can be couriered to our members (Provided they courier back the magazine back to us or to the next reader). The duration for keeping the magazine with be one week (7 Days). [Vichare courier will charge Rs.7/- only]

Jaiprakash - VU2JPN has taken the charge of the Library, All members wishing to avail this facility can contact JPN directly
on Tel: 5244784 or E Mail vu2jpn@...

Please note that the library system will remain same all other books in future..

==>WORLD TRADE CENTER AMATEUR RADIO VOLUNTEERS BEARING UP WELL

New York Amateur Radio Emergency Service and Radio Amateur Civil Emergency
Service volunteers generally are in good spirits, but tired, says New York
City-Long Island Section Emergency Coordinator Tom Carrubba, KA2D. "The mood
is positive," he said, more than a week into the grim reality of the World
Trade Center attack response. "Overall, it's going very, very well.
Everybody's settling into the routine of the operation."

Two dozen or more hams per shift are covering communications and logistical
support for the American Red Cross as well as supplementing communication
for the New York City Office of Emergency Management. "It's a great effort
every day, 24/7, and it's expanding as we get more requests." A single,
multi-purpose ARES/RACES net is being maintained on the 147.000 MHz repeater
```

in Manhattan. New York City District Emergency Coordinator and RACES Radio Officer Charles Hargrove, N2NOV, is serving as the incident commander.

At this point, Carrubba said, the need for volunteers is being largely covered by amateurs from the Greater New York City Area--which includes New York City and Long Island, Eastern New York, Connecticut and Northern New Jersey. Hams have volunteered from all over, however, including at least eight Delaware-Lehigh Amateur Radio Club members from from Pennsylvania's Lehigh Valley.

Hams are deployed to 13 American Red Cross shelters, two OEM sites, several staging areas, and Red Cross headquarters, and as net controls. At any given time, up to a half dozen amateurs are posted just outside the secure perimeter of the so-called "Ground Zero" World Trade Center site, where Carrubba described conditions as "terrible." Volunteers there have been asked to provide respirators and other protective clothing. Shifts at all locations are 12 hours long.

Carrubba explained that Amateur Radio volunteers are being rotated in and out of areas and duties in an effort to equalize the stress. "The first 30 or 40 hours everybody does 'the iron man act,' I call it, because they're running on adrenaline," he said. After that, everyone gets some rest and unwinds a little bit. "The people that are going back are fresh," he said.

Since September 11, more than 350 hams have volunteered in excess of 5000 work hours.

Carrubba anticipates the Amateur Radio support operations to continue for some time to come, since the normal telecommunications systems remain disrupted or problematic. "The communications in the shelter are being used like telephones," he said. Telephone service is available, but it can take 15 or 20 tries to get a call through. Carrubba said net traffic has been substantial, although there are occasional lulls.

Many more volunteers will be needed before the ARES and RACES operation stands down "Right now our task is a long-term effort, Carrubba said. "The schedule is being filled in on a day-by-day basis." To date, more than 200 individuals have signed up via the World Trade Center Disaster Relief Communications Web site, <http://wtc.ab2m.net>.

Carrubba expects that Amateur Radio assistance might be needed at least another week and possibly longer. "As long as there's a need for communications, we will be there," he said.

In the meantime, REACT International is seeking additional Amateur Radio and licensed GMRS users, primarily to support the Salvation Army's relief efforts in New York. "We still need volunteers," said REACT International Secretary Lee Besing, N5NTG, who added that some shifts on Wednesday went unfilled. "They're burning out and having to return to their jobs," he said. REACT is now running 20 volunteers per shift. Volunteers should visit the REACT International Web site, <http://www.reactintl.org/tragedy_09112001.htm> or contact Charles Bessels,

<NYCHelp@...>.

==>PENTAGON ARES TEAM STANDS DOWN

The team managed by Virginia Amateur Radio Emergency Service to support the Salvation Army's disaster relief operation at the Pentagon stood down this week. Virginia Section Emergency Coordinator Tom Gregory, N4NW, thanked all who volunteered and turned out to assist following the September 11 terrorist attack.

"With the changes in security, increased shift times and, most of all, the ability of the Salvation Army to [now] manage their support operations via telephone, the need for Amateur Radio has ended," Gregory said. "The support provided here in Virginia, by the hams in New York--where operations continue--and in Pennsylvania clearly demonstrates the resolve and commitment by so many hams to meet the needs of our fellow Americans at this time of great tragedy."

The ARES operation--with Tom Harmon, AK1E, as incident commander--provided logistical support between the Salvation Army's relief and recovery effort on site and the agency's Arlington headquarters. The Salvation Army has been providing food and refreshments to the crews engaged in the Pentagon investigation and recovery operations. Gregory said many of the more than 100 volunteers who reported for duty between September 11 and September 18 gave up time with their families and their jobs. In a few cases, he said, he even wrote letters to employers requesting that volunteers be allowed time off to work the incident.

"Amateur Radio performed exactly as it was supposed to," Gregory said. "We responded to the need to provide communications where none were available." He said the Virginia ARES organization stands ready to jump in again "at a moment's notice" if the need arises.

Another amateur team consisting of Mt Vernon Amateur Radio Club and Arlington County Amateur Radio Club members was providing communication and technical support to the American Red Cross relief effort at the Pentagon site. Arlington County ARES Emergency Coordinator Alan Bosch, KO4ALA, said his team was running shifts from 8 AM through 1 AM each day, and he expected the operation to continue at least through week's end.

ARRL President Jim Haynie, W5JBP, visited members of the Pentagon ARES team on Monday, September 17. Gregory said he appreciated Haynie's encouragement at a difficult time. Haynie was accompanied by ARRL First Vice President Joel Harrison, W5ZN, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth, and ARRL Virginia Section Manager Carl Clements, W4CAC.

==>ARRL "AMATEUR RADIO DEMO AND EDUCATION DAY" WOWS FCC

The ARRL this week took Amateur Radio's message directly to FCC Headquarters in Washington, DC. ARRL President Jim Haynie, W5JBP, said the idea behind the ARRL's "Amateur Radio Demo and Education Day" September 18 was to foster a positive view of the Amateur Service--especially with three new

commissioners on board who may not be familiar with ham radio and the issues it faces.

"The FCC is bombarded with paper every day in the form of filings, briefings, backgrounders and other print materials," said Haynie, who masterminded the demonstration. "So our purpose was to let the commissioners and their staff get out of the 'paper chase' for awhile and see Amateur Radio up close."

The "demo" part of the event included a fully operational HF Amateur Radio station, which was used to make several contacts, a selection of low-profile antennas, a PSK31 setup, and a software-defined radio designed and built by Bob Larkin, W7PUA--and featured in QST <http://www.proaxis.com/~boblark/dsp10.htm>. The "education" facet comprised informational graphics throughout the room that depicted such topics as Amateur Radio disaster communication, the Amateur Radio on the International Space Station (ARISS) program, and deed covenants, conditions and restrictions--or CC&Rs--as they affect hams subjected to private land-use regulations. One surprisingly popular poster featured a description of radio wave propagation. A videotape loop on Kid's Day ran all day long.

The event gave Haynie the chance to chat at length about Amateur Radio issues with FCC Chairman Michael Powell, commissioners Kathleen Abernathy, Michael Copps, and Kevin Martin, and key FCC staffers.

Equally enthusiastic was ARRL First Vice President Joel Harrison, W5ZN, who also represented ARRL at the event. "We wanted to show the continuing--and maybe even growing--importance of Amateur Radio to the nation's telecommunications infrastructure, and to demonstrate our role in technological development and emergency communication," Harrison said.

And that latter aspect did raise a somber note, as the Amateur Radio demonstration took place only days after the World Trade Center and Pentagon attacks. Powell asked the FCC to "go on with the show," because of his commitment to keeping the FCC running on a business-as-usual basis during the national crisis. News of the tragic situation still pouring in underscored Amateur Radio's value in providing emergency assistance.

Haynie said the highlight of the event was the interest and involvement of Chairman Powell and his staff as well as the opportunity personally to meet the other three new commissioners. Haynie said that some commissioners seemed particularly interested in information on Amateur Radio antenna installations that had been erected under the "reasonable accommodation" provision of PRB-1.

Haynie said he was especially pleased that every commissioner and nearly all FCC department heads turned out with their staff members--nearly 100 visitors in all. Chairman Powell spent considerable time examining every display and asked for a personal demonstration of the PSK31 equipment. He was also interested in Amateur Radio involvement in rescue efforts at the World Trade Center and Pentagon disaster sites and how the Amateur Radio Emergency Service operates.

ARRL General Counsel Chris Imlay said he was pleased to see that people did not just "cruise through" but stayed to discuss various issues and topics. Imlay said the event set the stage for future productive discussions with the FCC on a number of important Amateur Radio issues.

On behalf of the ARRL contingent, Haynie deemed the day a huge success. "This was the first time we have ever had such an opportunity, and in our collective opinions it was very successful!" he said.--Steve Mansfield, N1MZA

==>GEORGIA HAMS SUPPORT SOUTHERN BAPTIST RELIEF EFFORT IN NYC

A group of Georgia amateurs has accompanied Southern Baptist Convention Disaster Relief crews to the New York City area in the wake of last week's terrorist attacks on the World Trade Center. The hams are providing communications support to the Convention's mobile kitchens and shower units, deployed last week at the request of the Federal Emergency Management Agency.

The communications van of the Chattahoochee Baptist Association Amateur Radio team is stationed at a staging area at the Raritan Valley Baptist Church in Edison, New Jersey. Operating as W4CBA, the volunteers in Edison are utilizing the nearby New Jersey Institute of Technology Amateur Radio Club's K2MFF 147.225 MHz repeater in Newark to communicate with deployed kitchens and showers in the Brooklyn Naval Yard and near Ground Zero in Manhattan. Amateurs are accompanying volunteers from eight states into the field as they serve meals to relief workers and displaced residents.

According to Jackie Whitlock, N4JJW, the call from FEMA came on Wednesday. By last Friday, two kitchens had been deployed, with a third unit in reserve at Edison. In their first 36 hours on the scene, 89 volunteers had served more than 7500 meals at the Manhattan and Brooklyn sites.

The Chattahoochee Baptist Association has been supporting Southern Baptist Convention relief efforts since 1996.

==>THE YOUNGEST VOLUNTEER

Ten-year-old Beverly Holtz of Huntington, Long Island, New York, was distraught after hearing of the tragedy at the World Trade Center.

"I slowly explained what the news footage meant," said her father Fred Holtz, K2PSY. "The first thing she said was that she wanted to help."

Neither of them realized just how soon she would get the chance.

About six years ago Fred Holtz revived his interested in Amateur Radio. Soon his young daughter showed an interest in the hobby. Together they studied the electronics and Beverly was especially interested in the questions on emergency procedures.

"I told her that they were very important and you never knew when you would need them," Holtz said.

Father and daughter joined the local radio club and started going to meetings. Eventually she took the FCC exam for the Technician license and passed! She couldn't wait for her license to arrive and was ready to get on the air.

Beverly's new ticket finally arrived Friday, September 14, and she was officially KC2IKT. The next day she and her dad were running errands in the car, listening to an emergency net being run on a local repeater, when they heard a call go out for volunteers to staff a shelter as part of the response to the World Trade Center attack.

"We can do that!" Beverly told her dad. Fred Holtz called net control and explained that his daughter was only 10 and wanted to help.

"No problem," they were told. That afternoon they reported to the Red Cross shelter in Valley Stream, New York. Some 40 European students were staying at the shelter after being stranded when flights were cancelled at the nearby airports in New York City.

Using her dad's hand-held transceiver, Beverly answered questions from net control, relayed health-and-welfare traffic and was the only radio operator for the entire eight-hour shift.

"I was very impressed that [net control] treated her as an equal and that she was able to do it," her dad said. "She really had a trial by fire!"

Beverly said that the eight hours seemed like one hour. "I can't wait to do more," she said. "It made me feel good to help."--Diane Ortiz, K2DO

==>FCC PROHIBITS AUTOMATIC CONTROL ON LA AREA REPEATER

The FCC has terminated the automatic control privileges of the W6NUT repeater in the Los Angeles, California, area until further notice. An FCC review into the repeater's operation initiated last winter followed allegations that the licensee or control operator failed to address "long periods of jamming by users, broadcasting, music playing as well as a plethora of other violations."

The latest chapter in the W6NUT saga followed a September 7 letter to repeater owner Kathryn Tucker, AA6TK, from FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth. Hollingsworth specifically cited incidents of alleged rules violations in early February on W6NUT and reiterated that extensive monitoring of W6NUT showed "no evidence that a control operator even exists for this repeater." The FCC also has reported receiving numerous complaints about W6NUT.

In her reply to the FCC, Tucker identified her husband, Roy Tucker, N6TK, as the primary control operator "24 hours a day, 7 days a week, 52 weeks out of the year." But elsewhere in her response, Tucker noted that he was not on duty during the alleged misbehavior in early February that prompted the FCC review. Tucker also told the FCC that it was not the repeater's policy "to attempt to remove unruly operators" from using W6NUT. As for complaints, Tucker told the FCC that the W6NUT policy was to let them "go in one ear and out the other."

The rules do "not exempt the repeater station licensee from responsibility for the proper operation of his or her station or allow a repeater station licensee to ignore complaints, Hollingsworth wrote. "Given your response, it is evident that you do not understand the duties of a control operator."

Hollingsworth asked Kathryn Tucker to document her designation of Roy Tucker as the W6NUT control operator, and he noted that the rules hold licensee and control operator "equally responsible for the proper operation of the station." Automatic control does not absolve the licensee or control operator of the responsibility for illegal or improper conduct that airs, Hollingsworth explained. While there's an exception for inadvertent communications that violate the rules, he said, FCC rules do not consider improper or illegal conduct that's repetitive or continues for hours or days to be inadvertent.

Hollingsworth requested that the licensee or the control operator conduct a time and usage study of W6NUT's operation for 14 consecutive 24-hour periods to demonstrate that the repeater can comply with FCC rules without a control operator on duty. The repeater may continue to operate using remote or local control in the meantime.

As a result of the early February incident, Gregory S. Cook, ex-KC6USO, of Chico, turned in his license, and the FCC ordered Ted R. Sorensen III, KC6PQW, of Agoura Hills off all repeaters on the 144, 222, or 440-MHz bands for the next three years.

==>HAMS ACTIVATE AS GABRIELLE SWEEPS ACROSS FLORIDA

Florida amateurs provided the National Weather Service with real-time reports as Tropical Storm Gabrielle swept across Florida September 14. Amateurs staffed the Ruskin National Weather Service Amateur Radio station WX4TBW starting at 9 PM on September 13 and remained on duty throughout the storm's passage.

Damage reports began streaming in as Gabrielle approached Florida's west coast September 14. SKYWARN spotters from Sarasota and Manatee counties reported wind gusts as high as 74 MPH. Flooding generated by Gabrielle also forced an undetermined number of people from their homes in DeSoto, Hardee and Hillsborough counties.

Nets were established to pass critical information to the National Weather Service and to handle local and regional ARES activities. Several shelters were staffed by ARES operators throughout the ARRL West Central Florida Section. According to West Central Florida Section Manager Dave Armbrust, AE4MR, area hams took the event in stride.

"No big deal, our amateurs have been doing exactly this for years," Armbrust said. "Tropical storms and hurricanes are yearly events for ARES groups here. There is little need for us to do an annual SET as we generally get the real thing."

Armbrust was asked if anything made this particular storm different. "The massive loss of power kind of hit us by surprise," he said, "but it does

prove how important emergency power is to ARES." More than 250,000 Floridians lost power at least temporarily, but operations on the wide-coverage K4WCF repeater continued for nearly eight hours on emergency power.

"The flooding and wind actually took three repeaters off the air, but the ARES groups had trained for the loss of repeaters, and they did not miss a beat," Armbrust said.

While Gabrielle weakened as it moved eastward across the Florida peninsula, it still packed a punch. After passing over Florida, Gabrielle reached Hurricane strength over the Atlantic. The storm continued northeastward off the US and Canadian Coasts before becoming extratropical south of Newfoundland on September 19. The Hurricane Watch Net was not activated at any time.

==>SOLAR UPDATE

Solar maven Tad Cook, K7VVV, Seattle, Washington, reports: Solar flux and sunspot numbers are in a general upward trend since the beginning of August. Average daily solar flux was down almost 23 points, and sunspot averages were off nearly 43 points, when compared to the previous week.

The autumn equinox is Saturday, September 22, and right now is the best time for HF propagation in many months. Ten meters is getting really good at this time of year and will get better--at least in the northern hemisphere--during October and November.

Looking at average sunspot numbers for the past two weeks, this could be the best fall equinox of the current cycle for HF propagation. Average daily sunspot numbers from September 6-19 were 220, but for the same period last year, it was only 113, and 132 in 1999. We haven't had sunspot counts this high prior to the fall equinox since the peak of the last solar cycle, when the average daily sunspot number was 219 from September 6-19, 1989. Predicted solar flux for Friday through the middle of next week is around 230.

Sunspot numbers for September 13 through 19 were 223, 216, 183, 169, 159, 215 and 224, with a mean of 198.4. The 10.7-cm flux was 239.7, 236.6, 219.3, 207.1, 199.1, 203.8 and 198.8, with a mean of 214.9. Estimated planetary A indices were 18, 10, 15, 8, 10, 8 and 8, with a mean of 11.

==>IN BRIEF:

* This weekend on the radio: The Scandinavian Activity Contest (SSB) and the Radio Club Panama XXX Anniversary Contest are the weekend of September 22-23. JUST AHEAD: The CQ WW RTTY Contest, and the Louisiana, Texas and Alabama QSO parties are September 29-30 weekend. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Sign up for Amateur Radio Emergency Communications Level II course: Registration begins Monday, September 24, at 4 PM Eastern Time for the on-line ARRL Level II-Intermediate Emergency Communications Course (EC-002). Visit the ARRL Certification and Continuing Education Registration Page <https://www.arrl.org/forms/cce> to take advantage of this continuing education opportunity. Each class is limited to 50 seats, so don't wait to register. Answers to most questions are on the ARRL Certification and Continuing Education home page <http://www.arrl.org/cce> and the C-CE links at the right, including the C-CE FAQ page. Stay informed by reviewing these periodically. To learn more, contact ARRL Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* Vietnam War veteran Bill Ruth, W3HRD, killed in Pentagon attack: The terrorists' attack on the US has claimed another ham and ARRL member. Vietnam and Gulf War veteran and retired Chief Warrant Officer William Ruth, W3HRD, of Mount Airy, Maryland, is the fifth ham known to have died as a result of the terrorist attacks. The Army announced September 19 that Ruth, who worked at the Pentagon, was among the 30 confirmed dead. He was 58. "I remember Bill from my time with the Rock Creek Amateur Radio Association," said Leo Boberschmidt, W3LEO, a close friend. "I still remember the great slide program he gave on his experiences during the Gulf War; it's hard to say anything else right now." Four other amateurs are still missing in the wake of the World Trade Center attack.

* AMSAT-NA announces election results: AMSAT-NA Corporate Secretary Martha Saragovitz has announced the results of the 2001 elections for the AMSAT-NA Board of Directors. Barry Baines, WD4ASW; Dick Daniels, W4PUJ, Robin Haighton, VE3FRH and Bill Tynan, W3XO, will retain their seats on the board for two years. Bruce Paige, KK5DO, is the first alternate, and Richard Hambly, W2GPS, is the Second Alternate. They will serve until the next election.--AMSAT-NA

* Disney special event postponed until December: The W4D special event to commemorate the 100th birthday of Walt Disney, scheduled for September 30-October 1, will be postponed until December. The new date will be announced. The event is sponsored by the Disney Emergency Amateur Radio Service.

* George Jacobs, W3ASK, to step down as CQ propagation editor: After more than a half-century of writing CQ's monthly "Propagation" column, George Jacobs, W3ASK, will step down at year's end as the magazine's propagation editor. Tomas Hood, NW7US, will takes over the column in January 2002. Jacobs will remain on the CQ staff as contributing editor emeritus. "George Jacobs is an institution at CQ and in Amateur Radio community," said CQ Editor Rich Moseson, W2VU. "Over the past 50-plus years, he has helped demystify propagation for amateurs around the world, and has a prediction accuracy record that can't be beaten." Dayton Hamvention this year named Jacobs Amateur of the Year. An ARRL Full Charter Life Member, Jacobs was among the founding fathers of the OSCAR amateur satellite program and served as CQ's space communications editor prior to the launch of OSCAR I in 1961. Professionally, Jacobs was instrumental in building the Voice of America's worldwide short-wave network as well as other short-wave broadcasting

facilities.

* Guatemala gets 70 cm back: The Amateur Radio Club of Guatemala (Club de Radioaficionados de Guatemala--CRAG), the Guatemalan International Amateur Radio Union member society, reports that 430-440 MHz has been returned to Amateur Radio there. In 1996, the government eliminated amateur access in the formerly shared bands and auctioned 70 cm frequencies to commercial land mobile stations. These services reportedly now will be relocated to other spectrum. CRAG reports that Guatemala will seek a footnote at World Radiocommunication Conference 2003 to give Amateur Radio primary status at 430-440 MHz in that country. CRAG had petitioned the Guatemalan government to reverse its decision removing Amateur Radio from the band, and CRAG and IARU Region 2 officials had met several times with government officials on the subject. CRAG thanked the IARU Executive Committee for its support. The IARU Region 2 Conference will be held in Guatemala City September 30 to October 5.--AMSAT; IARU

* Kuwait authorizes 9K2USA call sign: Bob Furzer, K4CY/9K2ZZ, reports that the Kuwait Amateur Radio Society--in conjunction with the Kuwait Ministry of Communications--has authorized the use of the call sign 9K2USA by all radio amateurs in Kuwait. The authorization is being characterized as "a small token of the sympathy and support for the people of the United States from the citizens of Kuwait, and as an expression of deep condolence" following the deadly terrorist attacks on New York City and Washington, DC. The authorization will continue through the end of September. The Kuwait Amateur Radio Society will handle QSL chores using a common database, and all QSLs will be via 9K2RA, e-mail 9K2RA@kars.org. Visit the KARS Web site <http://www.kars.org>.--Bob Furzer, K4CY/9K2ZZ

* Special event station K5MFJ to commemorate MFJ's 30th anniversary: MFJ Enterprises in Starkville, Mississippi, will sponsor a Mississippi ARRL day in the park, Saturday, September 29. Special event station K5MFJ will be on the air to commemorate the company's 30th anniversary. Events include tailgating and factory tours of MFJ, Ameritron, Hy-Gain, and the MFJ metal shop and engineering building. ARRL and MFJ have provided door prizes. Lunch is on the house. Work K5MFJ on 10, 15, 20 or 40 meters and receive a commemorative certificate. QSL to MFJ Amateur Radio Club, PO Box 494, Mississippi State, MS 39762. For more information, visit the MFJ Web site <http://www.mfjenterprises.com>.

* Ten-Tec opens retail store, full-line dealership: Ten-Tec has opened an Amateur Radio retail store and full-line equipment dealership. The 1000-square-foot retail store and ham shack are in the lobby of the Ten-Tec manufacturing facility in Sevierville, Tennessee. "We have a large, loyal customer base that we'll be able to supply with accessories that complement our own manufactured equipment," says Ten-Tec Amateur Radio Product Manager Scott Robbins, W4PA. "Equipment from more than 20 manufacturers is already in stock and available direct from Ten-Tec." Ten-Tec is planning a grand opening celebration for its new retail outlet during the annual Ten-Tec Hamfest, Friday and Saturday, September 28-29. Visit the Ten-Tec Web site <http://www.tentec.com>.

* WWV survey deadline near: The deadline is September 30 for the National Institute of Standards and Technology survey seeking information on how WWV and WWVH listeners use the standard time and frequency broadcast services. The survey remains available on the Web <http://www.timesurvey.nist.gov/>. It's also available as a printable PDF or HTML file and in a hard-copy, mail-in version. According to WWV Station Manager John Lowe, the last WWV-WWVH user survey was done in 1985. He confirmed that the data collected ultimately could be used to determine whether WWV and WWVH remain on the air--especially given the popularity of NIST's other outlets, including its Web-based time server that gets in excess of 3 million hits a day. While Lowe strongly encouraged all WWV and WWVH users to send in a survey, he has suggested that more weight will be given to responses from corporate and institutional users. WWV in Ft Collins, Colorado, and WWVH on Kauai, Hawaii, broadcast continuous time and frequency information to millions of listeners worldwide. For more information, contact John Lowe, lowe@....

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections

effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

341. Jamboree On The Air Porgramme on 20th & 21st October 2001.

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

M.A.R.S coducted J.O.T.A last year from 5 locations actually 4. The response was overwelming, we were able to put more then 600 odd, Scouts and Guides on the Air inspite of this being the first time and we were not very well prepared for this event. We found that HAMs from Hydrabad & Bangalore very well prepared for this event, their Scouts & guides were wonderfully trained to participate in this Global event.

In the debriefing Meeting of J.O.T.A it was concluded that in 2001, we shall have atleast 8 stations is Mumbai. Mainly because lot of students were deprived from participating last year. We decided that in 2001 we shall put atleast 2000 Students on Air from Mumbai. Maybe even apply with our scores to ARRL for achievement Certificate.

This year unfortunately J.O.T.A has started on wrong foot, VU2UGJ , Mukesh Jaitley (Chairman) was to conduct this event, Due to some personal reasons he has backed out just about a month from the event. VU2HIT Huzefa Merchant, who has lately shown great interest in the Society events has volantereed to Conduct J.O.T.A .

Huzefa has called most of our members to prepare the list of participants and the list of Harware Available. The Response is
pathetic, We have 52 members in our society, 17 having H.F capability. Ironically only 4 have volantereed to participate with their HF rigs.Some members don't trust other members with their rigs, till the extent Scramble Team Boys don't trust other Scramble team Boys.

There are members who are scared that their rigs might overheat and get damaged, We have members who have HF Rigs in cold storage, but are not taking this occasion to warm up their equipment. We also have members who do not wish to WASTE their leave on saturday and can only participate on Sunday.

If this is the spirit of Members of M.A.R.S then maybe we were better off with JNA, atleast we had access to the equipment and we did not have to beg to our members.

CONCULSION : All interested members may contact VU2HIT directly on R-3731646, O-3460575 or mail vu2hit@indiainfo.com We shall wait for 3 more days for some possible good response from our LOYAL members, If we have good number we shall continue or else we will have no option but to Scrap this Event.

Also my suggestion to all the members who feel that this event is not worth to WASTE a leave, PLEASE DON'T PARTICIPATE..

TO , 26/09/2001
MEMEBERS OF MANAGING COMMITEE/MEMEBERS
MUMBAI AMATEUR RADIO SOCIETY
MUMBAI.

FELLOW HAMS ,

Freinds u can take this letter of mine as my resignation from the post of chairman , i really am not liking to do so
but am really hard pressed for time , due to my personal reasons , thats was the also reason to , pass on the responsibility
of JOTA event to VU2 HIT , HUZEFA MERCHANT , am thankful to him to take upon the same .

Well I thought if iam unable to do my duties as chairman then it would be fair enough for me to step down , and allow somebody else to take over , who can discharge the duties with resposibility which is required for the post.

For the upcoming JOTA event , i request all members to come forward and participate , to make ita sucess, sucess it would be but its magnitude can be increased.

My sincere wishes are for the society for its moving forward with full jest and vigour .

Will always be there godforbid if any disaster happens .

73s

VU2UGJ

MUKESH JAITLEY.

Topic: 341 Message: 343

Dear Nilesh, Huzefa and 49 Other Members,

1. I am Kailash Gupta, VU2KIZ. QTH ? Baroda. I had joined MARS Team from Vadodara Rly. Station on 26th January, 2001 to restore emergency communications after the earthquake and setup the antenna at Sachivalaya, Gandhinagar and operated radio station.

2. I received in 1961 Bharat Scout Certificate and Badge from Lady Oval Baden Powell, Chief World Guide and wife of the Founder of the Scouting movement. In 1962, I received President?s Scout Certificate from Dr. Sarwapali Radhakrishnan, the then President of India and was selected for the World Scout Jamboree in Greece. My Log Book shows I have made number of contacts on 21st and 22nd October, 2000 during JOTA, including with the stations set up by MARS at Mumbai.

3. I wanted to become member of the MARS in the train itself on 26th January, 2001. I became member soon afterwards. Due to some reason (which neither I know, nor I want to know, since it is history and nothing can be done about it), I had not received any communication from MARS. On 14th Sept., 2001 early morning I was in transit through Mumbai and had a contact with Nilesh through LL. Subsequent to that I became member of this e-group and the first mail I have received is about JOTA. When the mail came, I was on tour. However, within 3 days deadline, I am replying.

4. Four Members have already offered HF equipment for the JOTA and I am the fifth. There is still one month more and more members may offer their equipment. Even if others don?t offer their HF rigs, five stations are sufficient. We already have Huzefa willing to take up the lead for participating in the JOTA. My humble request is let us go ahead with participation in the global once a year event, JOTA and I am willing to provide what ever help is required from me. In addition to being HAM, I have knowledge and experience about Scouting, which I am willing to share and spread. Scouting is the best activity for character building and preparing young persons for any eventuality as the Scouting motto BE PREPARED itself

suggests.

5. CONCLUSION: Let?s go ahead and participate in the JOTA.

Kailash Gupta, VU2KIZ

==>ARES/RACES NYC EFFORT STANDS DOWN; REACT SEEKS VOLUNTEERS

After more than two weeks of intense effort, the Amateur Radio volunteer
activation in New York City is winding down. ARRL New York City-Long Island
ARES Section Emergency Coordinator Tom Carrubba, KA2D, says all ARES/RACES
World Trade Center operations in support of the American Red Cross and the
NYC Office of Emergency Management ceased early this week.

REACT International continues to seek additional Amateur Radio and licensed
GMRS users, primarily to support the Salvation Army's relief efforts in New
York City. REACT International Secretary Lee Besing, N5NTG, said his
```

organization has been lining up volunteers, and Jeff Schneller, N2HPO--who's affiliated with the Salvation Army Team Emergency Response Network (SATERN)--has been doing the scheduling for the support effort.

REACT needs up to two dozen volunteers a day. Those who are willing and able should first visit the REACT International Web site <http://www.reactintl.org/tragedy_09112001.htm> or send e-mail to NYCHelp@....

Carrubba says the American Red Cross closed all shelters that remained open in New York City on Sunday, September 23, while the New York City Office of Emergency Management shut down Radio Amateur Civil Emergency Service support Monday, September 24. Any remaining Amateur Radio Emergency Service activity will be handled by volunteers from the Greater New York City area, he said.

New York City District Emergency Coordinator Charles Hargrove, N2NOV--who served as incident commander--has expressed his appreciation to all amateurs who volunteered their time and equipment. Hargrove outlined Amateur Radio's role in the disaster response in a September 27 interview on Bloomberg Radio's WBBR in New York City.

ARRL New York City-Long Island Section Manager George Tranos, N2GA, also expressed his gratitude to all Amateur Radio operators who came forward to assist the ARES/RACES effort. "The system works and our 'hobby' has performed well as a 'service' to the public," he said.

Tranos said some 500 Amateur Radio volunteers helped out with communications support for the disaster. "The ARES organization has done a good job in mobilizing--some being on scene and ready on the morning of September 11," he said. Tranos also praised Carrubba, who, he said, "showed the way and was instrumental in the administration, organization and logistics of the operation."

"Thanks and congratulations go to each of those who helped," Tranos concluded. "Now, hopefully, we can try to return to some degree of normalcy."

==>ARRL PRESIDENT PRAISES AMATEUR RADIO EMERGENCY EFFORT

ARRL President Jim Haynie, W5JBP, took advantage of a visit to New York City hams to express his gratitude for the overall Amateur Radio volunteer effort in the wake of the terrorist attacks September 11.

"On behalf of the 680,000 ham operators in the US, thank you for doing such a fine job," he said during a September 21 visit with Amateur Radio Emergency Service volunteers at the heart of the communication effort.

ARRL Hudson Division Director Frank Fallon, N2FF, accompanied Haynie on his visit. "From the very first day I have been proud of the way ARRL members in the Hudson Division responded in overwhelming numbers," Fallon said. "So many responded that many, unfortunately, were turned away."

"It really has been our finest hour!" Fallon continued. "It has made us all very proud to be Amateur Radio operators."

John MacInnes, a Red Cross communications officer based in Tucson, Arizona, expressed high praise for the Amateur Radio community and for ARRL.

"We wouldn't be where we are today without the ham radio operators," he told Haynie. He said Haynie should be very proud of ARRL and asked him to relay his message of thanks throughout the amateur community.

==>THREE SCHOOLS ENJOY ISS INTERVIEWS

Students at schools in Florida and Virginia got to talk with International Space Station Expedition 3 Crew Commander Frank Culbertson, KD5OPQ, this month. The contacts were arranged as part of the Amateur Radio on the International Space Station program.

On September 14, 15 youngsters and their teacher at Altamonte Elementary School in Altamonte Springs, Florida, questioned Culbertson about life in space and how he and his crew are coping. Given that the contact was just a few days after the World Trade Center and Pentagon terrorist attacks, Culbertson told pupils that, for a change, he and the crew wished they had TV aboard.

"This is the only week that I have been up here that I wish I could have watched TV, because of all the things that are happening down there which obviously touch all of us very deeply," he said.

Culbertson also referred to attacks during a September 19 ARISS QSO with students at Western Albemarle High School in Crozet, Virginia. Culbertson said the crew members heard about the World Trade Center and Pentagon attacks from a doctor on Earth while they were involved in a medical conference. "Obviously it was quite a shock, and it took a while to get me the details," he said. "Of course, it was hard to believe, at first."

On the lighter side, when asked by another high schooler about how the ISS smells, Culbertson replied, "We think it smells pretty good, but I bet you'll have to ask the next crew what they think when they get here."

Early on the morning of September 25, Culbertson was quizzed by 13 first and second graders at Ladysmith Primary School in Ruther Glenn, Virginia. Among other things, the pupils there wanted to know what crew members did with their dirty clothes, how they got rid of garbage (both are burned up in Progress rockets sent zooming into Earth's atmosphere) and how they washed dishes (they don't use dishes).

"It was a tremendously positive experience," said Jim Whitaker, KQ4RH, who helped organize the Ladysmith contact and whose wife, Carolyn, KF4RXJ, is a kindergarten teacher at the school. "Frank Culbertson was wonderful! You can tell he understands children and wanted to make this special for the kids."

Altamonte teacher Cricket Scheer, KG4EGW, called her school's QSO "an experience of a lifetime, and a happy, positive one during a very frightening time."

For more information on the ARISS program, visit the ARISS Web site <http://ariss.gsfc.nasa.gov>

==>SOLAR FLARE ACTIVITY POSTPONES KODIAK STAR LAUNCH

Solar flare activity continued this week to postpone the Kodiak Star launch from Alaska. An Athena I launch vehicle will carry three Amateur Radio payloads, including the APRS-equipped PCSat, built by midshipmen from the US Naval Academy.

The midshipmen worked under the guidance of Academy Senior Project Engineer Bob Bruninga, WB4APR--the recognized "father of APRS"--who's in Alaska for the big event. Word this week was that the launch would not happen before Saturday, September 29.

A severe X-class flare and a high-velocity earthbound coronal mass ejection--or CME--were observed at 1038 UTC on September 24. The solar event, said to be the second largest in the 30 years, hurled slower-moving particles toward Earth, driving proton flux levels well above those allowable for a safe launch and keeping the rocket on the ground. The CME also triggered geomagnetic storms and spectacular auroral displays in northern latitudes.

High levels of charged particles can affect the reliability of the launch vehicle's guidance system.

The launch will be the first orbital shot from the Kodiak launch complex in Alaska. In addition to PCSsat, the Athena I launcher will carry the Starshine 3 and Sapphire payloads. PCsat is a 1200-baud APRS digipeater designed for use by amateurs using hand-held transceivers or mobiles. It will operate on 145.825 MHz. Starshine3 is a "disco" mirror ball with AX.25 9600 baud telemetry on 145.825. Sapphire has 1200-baud AX.25 telemetry and a voice replay on 437.1 MHz. Starshine 3's "disco" ball will be visible to the eye and give earthbound students the opportunity to participate in its primary mission of satellite tracking.

The Kodiak Star initially was scheduled to launch in late August. The launch was postponed previously as a result of air travel problems caused by the September 11 attacks on the World Trade Center and the Pentagon.

For more information, visit the PCSat Web site, <http://web.usna.navy.mil/~bruninga/pcsat.html>. For more information on Sapphire, visit the Stanford University Space Systems Development Laboratories Web site, <http://ssdl.stanford.edu/aa/projects/squirt1/sapphire_overview.html>. The Starshine Web site is <http://www.azinet.com/starshine/>

==>FCC STAFF MEMBER STEVE LINN, N4CAK, SK

The FCC and Amateur Radio communities are mourning the loss of FCC staff member Steve Linn, N4CAK, of Lower Allen Township, Pennsylvania. Linn, 50, and his wife, Lesley Ellen Nearman, 44, died September 21 as a result of an automobile accident in Maryland. The couple's two children, ages 9 and 12, survived the wreck.

ARRL President Jim Haynie, W5JBP, said he was deeply saddened by the news. "Steve had not only been a valued employee at the FCC but also a good friend to the Amateur Radio community," he said. "Having just visited with Steve a few days ago in Washington, I will remember his jovial spirit and dedication to the success of ham radio. Our prayers will be with their children, Steve and Lesley's families and all the employees of the FCC who will long feel this great loss."

Linn was among the FCC staff members who turned out September 18 for the ARRL "Amateur Radio Demo and Education Day" at FCC Headquarters. At the time of the fatal mishap, Linn and his family were on their way to the Virginia Beach Hamfest where he and Haynie were scheduled to do a forum presentation together.

FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth said Linn was well-liked by the FCC staff members and contractors he worked with at the FCC's Gettysburg office. "He was a very, very nice guy, a good engineer and he had common sense," Hollingsworth said. "He knew the value of Amateur Radio and saw the big picture." Hollingsworth said that the Enforcement Bureau was increasingly relying on Linn for Land Mobile and Amateur licensing and technical matters. "We will miss him very much," he added.

An ham since the 1980s and an ARRL member, Linn was deputy chief of the Licensing and Technical Analysis Branch for private wireless within the Wireless Telecommunications Bureau. He had worked for the FCC for about 25 years. His supervisor, Mary Shultz, said called Linn's death "a major shock" to the branch. "He'll be difficult to replace as an employee," she told ARRL, "but impossible to replace as a friend."

Linn frequently served as a source of information on the Universal Licensing System and the Commission Registration System, CORES. He spoke about ULS during the 2000 Dayton Hamvention FCC Forum. He also was a presenter at local hamfests.

Services for the couple were held September 24.

==>MICHIGAN HAM GRANTED SHORT-TERM RENEWAL, UPGRADE

The FCC has acted on longstanding renewal and upgrade applications from a Michigan ham whose operation had come under Commission scrutiny. The FCC this month renewed the license of Allen J. Stap Sr, N8OKU, of Gobles for a two-year term, provided he follows FCC rules. It also granted his application to upgrade to General.

Stap's upgrade was held in abeyance for more than a year while the FCC evaluated his written responses and on-the-air behavior following earlier sanctions. A letter from FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth noted that Stap had entered a plea of no contest in May 1997 to an alleged violation of a Michigan statute that makes it a misdemeanor to "prevent, interfere, obstruct or impede a public safety radio communication." Stap was accused of intentionally interfering with a RACES station engaged in test operations in support of civil defense

communications, Hollingsworth said.

Stap served a "delayed" sentence of nine months after agreeing not to operate on 2 meters and to surrender his radio equipment to the police. After nine months, the restrictions against Stap were lifted and the charge dismissed.

Subsequently, Stap was notified by the FCC to answer to complaints alleging that he had interfered with with Kalamazoo repeaters. Stap received a warning letter in February 2000.

Stap's license came up for renewal in May. Hollingsworth said that since the FCC had received no complaints about Stap since last year, it would grant the two-year renewal. At the same time, the FCC acted favorably on Stap's application to General class. Hollingsworth told Stap that he may routinely renew his Amateur Radio license if he follows the rules during his current two-year term. But he warned that valid complaints of rules violations could lead to a license revocation hearing.

==>FORMER MIDWEST DIVISION VICE DIRECTOR CHUCK MILLER, WA0KUH, SK

Former ARRL Midwest Division Vice Director Lyndell "Chuck" Miller, WA0KUH, of Kansas City, Missouri, died September 24 after a lengthy illness. He was 75 and had been a ham for nearly 40 years.

An ARRL Life Member, Miller served as Midwest Division Vice Director from January 1988 to December 1991 and was a founder and life member of the PHD Amateur Radio Club.

"Chuck was the main driving force behind the Club," said former Kansas Section Manager, Bob Summers, K0BXF. "Its success and the PHD hamfest were due to his undying effort." Larry Staples, W0AIB, called Miller "truly a remarkable man and a credit to the Amateur Radio Service."

Miller also helped establish the PHD Scholarship Award <http://www.arrl.org/arrlf/scholgen.html>. The program awards $1000 annually to a licensee living in the ARRL Midwest Division (Iowa, Kansas, Missouri and Nebraska), who is either enrolled in a course of study of journalism, computer science or electronic engineering, or is the child of deceased radio amateur.

Survivors include Miller's wife, Mary Carolyn, and two daughters. Services were September 27.

Memorial contributions are invited to the PHD Scholarship Fund <http://www.arrl.org/arrlf/contribs.html#memorial> c/o ARRL, 225 Main St, Newington, CT 06111.

==>SOLAR UPDATE

Solar sage Tad Cook, K7VVV, Seattle, Washington, reports: This has been an incredible week for solar activity. The solar flux hit a new high for this sunspot cycle when it rose to 282.6 on Wednesday. The previous high solar

flux was 273.5 on March 28, 2001, and before that was 262 on May 17, 2000.

The high activity at the end of March and during this week would seem to shift the peak of the solar cycle forward, but that reading is always based on a smoothed running average and is determined long after the peak. But the high activity this week was not isolated. Trends have been solidly higher for two months.

Average daily solar flux rose dramatically this week from last by nearly 45 points. Average daily sunspot numbers were up almost 90 points!

With all the new sunspots and associated energy radiating from the sun, there were some geomagnetic upsets also. The worst days were Sunday and Wednesday, when the planetary A index was 27 and 24. Sunday had a rapid rise in geomagnetic indices, starting out the UTC day with the planetary K index at zero, then going to five only six hours later.

The most recent projection shows geomagnetic indices stabilizing briefly with a planetary A index of 10 on Friday, then rising to 15 on Saturday and 18 on Sunday. Projected solar flux is 265 for Friday and 260 for both Saturday and Sunday.

Since we have just passed the autumnal equinox, the fall DX season is in full effect. Now is a great time to enjoy the best propagation in years on 10 and 12 meters.

Sunspot numbers for September 20 through 26 were 276, 258, 293, 275, 315, 320 and 278, with a mean of 287.9. The 10.7-cm flux was 226.8, 238.6, 255.2, 258.5, 279.3, 275.1 and 282.6, with a mean of 259.4. Estimated planetary A indices were 5, 5, 10, 27, 6, 18 and 24, with a mean of 13.6.

==>IN BRIEF:

* This weekend on the radio: The CQ WW RTTY Contest, and the Louisiana, Texas and Alabama QSO parties are September 29-30 weekend. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Correction: An amateur team consisting of members of the Vienna Wireless Society, the Arlington County Amateur Radio Club and other amateurs provided communication and technical support to the American Red Cross relief effort at the Pentagon site. An report in The ARRL Letter, Vol 20, No 38 (9/21/01) incorrectly identified one of the primary clubs involved with this effort.

* Amateur Radio Emergency Communications Class Level II openings remain: A few seats remain for the September on-line class Level II (Intermediate) Emergency Communications Course (EC-002). This class begins the week of October 1. Taking the Level I course first is not mandatory. If you want to learn more about emergency communications and net procedures, Level II offers new tools for your local use. Visit the ARRL Certification and Continuing Education Registration Page <https://www.arrl.org/forms/cce> to

take advantage of this continuing education opportunity. Answers to most questions are on the ARRL Certification and Continuing Education home page <http://www.arrl.org/cce> and the C-CE links at the right, including the CCE Syllabus, FAQs, Classroom Courses, and much more. To learn more--or if you have problems registering--contact ARRL Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* Continuing Legal Education Seminar set for Pacificon 2001: ARRL Volunteer Counsel Harry Styron, K6HS, and Phil Kane, K2ASP, will conduct Pacificon's annual Continuing Legal Education Seminar on October 19 in Concord, California. The session will be held at the Sheraton Concord (Airport) Hotel from 9 AM until noon. The $75 cost of the seminar for includes a copy of Antenna Zoning for the Radio Amateur by Fred Hopengarten, K1VR, a $49.95 value. The seminar covers in-depth state and local antenna regulation with the focus on amateur issues and other legal topics affecting Amateur Radio. Registration is exclusively at the seminar site, and three hours of MCLE credit is available to California attorneys. More information on Pacificon 2001 is available on the Pacificon Web site, <http://www.pacificon.org>.

* Two more amateurs reported lost at World Trade Center: ARRL has learned that two more amateurs were lost and presumed dead in the World Trade Center attack September 11. Gerard J. "Rod" Coppola, KA2KET, was a transmitter engineer for WNET, channel 13. He was 46 and lived in New York City. Winston A. Grant, KA2DRF, was a computer technician with Empire Blue Cross/Blue Shield. He was 59 and lived in West Hempstead, New York. A fund has been established to assist the families of broadcast engineers. Send checks made out to "Ennes Educational Foundation Trust" to The Society of Broadcast Engineers Inc, 9247 N Meridian St, Suite 305, Indianapolis, IN 46260, ATTN: Broadcast Engineer Relief Fund.--some information courtesy of Paul Sanchez/Emmis Broadcasting

* Maryland tornado prompts RACES activation: Prince George's County Maryland Emergency Coordinator and RACES Radio Officer Jim Cross, WI3N, reports that the Prince George's County Emergency Operations Center was activated September 24 in response to an F3 to F4 tornado in the northern part of the county. The tornado, which arrived at the height of rush hour, damaged buildings and vehicles on the campus of the University of Maryland and caused two deaths. In addition utility poles and trees were knocked down on Route 1 in Beltsville, and the storm damaged Laurel High School and approximately 50 homes in the Laurel area. Traffic was halted in several areas. The EOC activated RACES, and a net was established at 6:35 PM Eastern Time on the Green Mountain Repeater Association 146.61 MHz repeater. The GMRA's 146.88 repeater also was used. Members checked in to the 146.61 repeater and stood by. Other RACES members were able to drive through neighborhoods and report damage to net control at the EOC. "Fortunately the GMRA installed battery backup for its repeaters about a year ago. The power was out to about 11,000 homes including the 146.61 repeater," Cross said. The 147.225 repeater was activated subsequently, and trustee (and Montgomery County Deputy RACES Radio Officer) John Creel, WB3GXW, stood by as it was used to relay traffic between the EOC and a Red Cross shelter in Laurel. Operations were secured at 11:35 PM Eastern Time. Deputy RACES Radio Officer

HD Scott, K3HDM, handled net control duties during the crisis.

* Ham-sailor pins down arrival in US: David Clark, KB6TAM, who's trying to be the oldest person to sail solo around the world, has set Pearl Harbor Day, December 7, as his new "confirmed" date of arrival in Fort Lauderdale, Florida. Clark currently is in Trinidad, sitting out the Atlantic hurricane season. Clark told his wife, Lynda, that he was saddened by the September 11 terrorist attacks. "He has been following the news in Trinidad via TV," she said. "It makes him homesick to be back in the USA where he can be close to his family, and he is very anxious to get under way again." Clark will leave Trinidad the first week in November. He plans to complete his trip at the Marriott Marina on 17th Street Causeway, Fort Lauderdale. A gala celebration will ensue.

* Southeastern Vice Director wins 2001 CHAMP Award: ARRL Southeastern Division Vice Director Evelyn Gauzens, W4WYR, is the recipient of the 2001 Citizens' Ham Mobile-Marine Patrol (CHAMP) Award. Gauzens is cofounder of the Tropical Hamboree and a prominent community activist. The annual award is presented to an Amateur Radio operator for an exemplary act of service to the community during the preceding year, or to an amateur who has demonstrated years of distinguished service to both Amateur Radio and the community. The CHAMP Award will be presented October 5.

* Transpacific LF "insurance test" is a success: A second claim has been made of Amateur Radio LF reception across the Pacific. Organizer of the transpacific tests Bob Vernall, ZL2CA, reports that on September 22, ZL6QH, ZL3PN, ZL3JE, ZL4OL, ZL4MD and AX2TAR (VK7ZAL) transmitted test signals in the 165-190 kHz band. "Various DX listeners had prior knowledge of the schedule of individual test frequency and coding used by each station," Vernall reports. As happened in the initial successful listening test on June 30, Steve McDonald, VE7SL, of British Columbia, Canada, managed to receive signals from ZL6QH sometime before dawn. "This time VE7SL obtained an ARGO capture of both frequencies of the DFCW [dual-frequency CW] transmission," Vernall said. "The path length is estimated to be 11,709 km." The uniquely coded transmission consisted of repetitive sending of the letter "Q" sent using dual-frequency CW, with all elements being of 120 seconds duration.

* Wisconsin PRB-1 bill clears committee: Wisconsin's Amateur Radio antenna (PRB-1) bill AB-368 this week was voted out of committee for Assembly floor action. AB-368 will be taken up in full session on October 2, according to Cari Lee, aide to Rep Luther Olsen, who has taken charge of AB-368 in the Assembly following the resignation of Rep Joan Wade, the bill's original sponsor.--Jim Romelfanger, K9ZZ

* University of Texas Amateur Radio Club to mark 80 years with special event: The University of Texas Amateur Radio Club, N5XU, will operate special event station K5T from September 29 to October 7, to celebrate its 80th year as an Amateur Radio club. Experimental/Amateur station 5XU was first licensed in 1921 and made its first transmissions from the university on October 1 of that year. K5T will also be active as a multi-operator

station in the Texas QSO Party, September 29-30. Visit the N5XU web site, <http://n5xu.ae.utexas.edu/80years/>. For information on the Texas QSO Party, see <http://www.k5vuu.com/tqp/>

* VHF radio designer Ed Clegg, W8LOY, SK: Edward T "Ed" Clegg, W8LOY, of Cincinnati, Ohio, died September 7. He was 80. An ARRL member and a New Jersey native, Clegg was founder of Clegg Communications Corporation, one of the early and popular amateur VHF radio manufacturers. Among his designs were the Clegg Zeuss transmitter and companion Interceptor receiver, the FM 27-28 transceivers, the Clegg 99er 6-meter rig and the AV-44 All Bander receiving converter. In 1964, Clegg authored an article on speech clipping for QST. Clegg retired to Ohio in the early 1990s. His wife, Mavis, is among his survivors.

* Vote on QST Cover Plaque Award: The winner of the QST Cover Plaque Award for September was Frank Gentges, K0BRA, for his article "The AMRAD Active LF Antenna." Congratulations, Frank! The winner of the QST Cover Plaque award--given to the author of the best article in each issue--is determined by a vote of ARRL members. Voting takes place each month on the Cover Plaque Poll Web page, <http://www.arrl.org/members-only/qstvote.html>. As soon as your copy arrives, cast a ballot for your favorite article in the October issue of QST. Voting ends October 15.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; http://www.arrl.org. Jim Haynie, W5JBP, President

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb at http://www.arrl.org for the latest news, updated as it happens. The ARRLWeb Extra at http://www.arrl.org/members-only/extra offers ARRL members access to informative features and columns.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site,
http://www.arrl.org/members/. You'll have an opportunity during registration
to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other
material. To change these selections--including delivery of The ARRL
Letter--registered members should click on the "Member Data Page" link (in
the Members Only box). Click on "Modify membership data," check or uncheck
the appropriate boxes, and click on "Submit modification" to make selections
effective. (NOTE: HQ staff members cannot change your e-mail delivery
address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be
posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio
Club: Send e-mail to majordomo@qth.net (no subject needed). The body of the
message should say "subscribe letter-list" to subscribe or "unsubscribe
letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who
receive The ARRL Letter via this listserver.)

345. The ARRL Letter, Vol 20, No 40

==>SALVATION ARMY STILL NEEDS HAM VOLUNTEERS IN NEW YORK CITY

Although the Salvation Army has cut one shift of radio operators to support
the organization's World Trade Center relief operation in New York City, it
still needs fresh Amateur Radio volunteers. "We are still short of people,"
said Jeff Schneller, N2HPO--who's coordinating the Salvation Army Team
Emergency Response Network, or SATERN, operation.

The midnight to 8 AM shift has been suspended, but SATERN still needs six
Amateur Radio operators per shift--a total of 12 per day--for the indefinite
future. Schneller said the SATERN volunteers who have been there the longest
now "are getting weary."
```

SATERN needs operators at the Kennedy Airport warehouse with their own base station set up from about 8 AM until about 9 PM--possibly broken into shifts. In addition, SATERN needs operators to ride with trucks to provide communication. Operators start and end shifts at Salvation Army Division HQ on 14th Street in Manhattan, which also needs operators.

Schneller said the word he has from Salvation Army is that the organization is happy with the Amateur Radio support it's been getting. "They want us to keep going," he said. So far, he said, some 40 Amateur Radio operators have turned out to help support the Salvation Army relief effort--some from the New York City area but others from as far away as Missouri, North Carolina, Georgia and Florida.

"Response from around the nation and the world has been heartwarming," Schneller said, "especially those amateur operators who were willing to put their life on hold, so that they could come help out for a few days or weeks in NYC."

Schneller requested that potential volunteers contact him directly: Home, 718-461-0370; Cell, 917-226-1339; Page, 718-939-3939 (give message to operator); Ham radio, Call N2HPO on the 147.270 repeater (141.3 or 127.3 CTCSS).

The Salvation Army said this week it's sending additional personnel from the Midwest to New York City to assist those who have been on duty since September 11. Members will offer grief counseling, coordinate food service, be on-site in Salvation Army emergency disaster vehicles and organize supplies and volunteers.

==>KODIAK STAR LAUNCH IS A SUCCESS

Following several delays, the Kodiak Star launch vehicle took off into space from Alaska early Sunday, September 30 UTC. The Athena I rocket boosted three Amateur Radio payloads and PICOSat--a technology demonstration satellite--into orbit. Initial indications were that all satellites deployed properly and were being monitored on the ground. The payloads included the APRS-equipped PCsat, built by midshipmen from the US Naval Academy under the guidance of Bob Bruninga, WB4APR, the acknowledged "father of APRS."

PCsat is a 1200-baud APRS digipeater designed for use by amateurs using hand-held transceivers or mobiles. PCsat is transmitting 1200 baud AFSK telemetry on 145.825 MHz, but the satellite has not yet been commissioned for general amateur use. "We ask that users please wait while we get the system loaded," Bruninga said.

PCsat's downlink has been heard around the world, with reports logged from Alaska and Hawaii as well as from South Africa, Europe, Africa and even Antarctica.

Carried into space in addition to PCsat were the Starshine 3 and Sapphire payloads. Starshine3 is a "disco" mirror ball with 9600 baud telemetry on 145.825. Sapphire has 1200-baud telemetry and a voice replay on 437.1 MHz. Starshine 3's mirror ball is visible to the naked eye for earthbound

students to track. Chip Margelli, K7JA, spotted the satellite October 2 on the West Coast. "Starshine was at least as bright as Mars," he reported. "Very impressive!"

Sapphire is a joint effort between the Naval Academy's Small Satellite Program, Stanford University and Washington University at St. Louis. Starshine is a NASA payload.

The Kodiak Star launch--the first orbital mission from the Kodiak launch complex--had to be delayed several times--most recently due to high solar flare activity this past week. Earlier delays resulted from unsuitable weather conditions, a problem with a tracking radar, and travel delays because of the recent air traffic shutdown following the September 11 terrorist attacks.

For more information, visit the PCsat Web site, <http://web.usna.navy.mil/~bruninga/pcsat.html>. For more information on Sapphire, visit the Stanford University Space Systems Development Laboratories Web site, <http://ssdl.stanford.edu/aa/projects/squirt1/sapphire_overview.html>. The Starshine Web site is <http://www.azinet.com/starshine/>

==>CORES/FRN "MASS CONVERSION" PLANNED FOR ULS REGISTRANTS

Before the switchover to mandatory Commission Registration System (CORES) registration on December 3, 2001, the FCC plans to do a "mass conversion" from its Universal Licensing System (ULS) database.

Once CORES becomes mandatory in December, everyone doing business with the FCC--licensed or not--must obtain and use a 10-digit FCC Registration Number--or FRN. The FCC called the move is "a first step" toward streamlining fee collection and tracking. Many amateurs registered with the ULS were assigned an FRN by CORES in a mass conversion last year. Affected amateurs were notified by mail.

An FCC Wireless Telecommunications Bureau spokesperson told ARRL this week that another mass conversion will be done prior to December. As a result, anyone who has registered a Taxpayer Identification Number--typically an individual's Social Security Number--with the FCC will be assigned an FRN, which will appear in the FCC amateur database.

The requirement to obtain an FRN extends to applicants for an Amateur Radio license as well as to anyone required to pay a fee to the FCC, such as those applying for a vanity call sign. An FRN will not be needed to file comments in rulemaking proceedings, however.

Amateur Service licensees not already registered in the ULS are encouraged to register their TINs soon, to save the step of a second CORES registration after December 3. To register, visit the FCC's ULS Web site <http://www.fcc.gov/wtb/uls> and click on "Register TIN/Call Sign." (NOTE: The Universal Licensing System will be down for scheduled maintenance from 10 PM Eastern Time Friday, October 5, until 8 AM Eastern Time Monday,

October 8.)

The FCC established CORES last year and has been in the process of implementing it. The FCC's Wireless Telecommunications Bureau concedes that a lot of issues remain undecided regarding how CORES/FRN will work for the Amateur Service. For more information on CORES/FRN, visit the FCC CORES Web site <https://svartifoss2.fcc.gov/cores/CoresHome.html>.

==>AO-40 SUCCESSFULLY TESTS GPS EXPERIMENT

AMSAT News Service reports that the GPS experiment on the AO-40 satellite has undergone successful testing. The experiment--supplied and sponsored by NASA--is designed to determine if it is possible to get positional data while outside of the GPS ring of satellites.

"We received a signal on the apogee receiver from about 52,000 km out with good signal levels," said Jim White, WD0E, who's been the AMSAT coordinator and chief operator for this activity. "Further data is being gathered and those downloaded so far are being analyzed."

There are two GPS receivers on AO-40, A and B. The A receiver is for receiving signals while in the vicinity of apogee--when the satellite is farthest from Earth. The B receiver provides signal reception in the vicinity of perigee--when the satellite is closest to Earth. Both receivers are operational, and data are passed from the receivers through the RUDAK digital transponder to the S-band transmitter.

AMSAT-VP for Human Spaceflight Programs Frank Bauer, KA3HDO, was instrumental in setting up the GPS experiment. "If this experiment goes the way I expect, it will revolutionize the way we use GPS in space," Bauer said. "Many future HEO (high Earth orbit) spacecraft will be able to take advantage of GPS for autonomous navigation and station keeping."

Earlier this month, AO-40 ground controllers successfully tested the spacecraft's 24-GHz transmitter. The K-band transmitter on 24.048 GHz was activated September 9 on orbit 396 and connected to the passband and beacon inputs that feed the S2 (2.4 GHz) transmitter.

For more information on AO-40, visit the AMSAT-NA Web site, <http://www.amsat.org>.

==>ENFORCEMENT CASE HIGHLIGHTS FCC CERTIFICATION RULES

The FCC's Riley Hollingsworth used the occasion of a recent Warning Notice to hammer home the FCC's position on the sale of RF amplifiers that have not received FCC certification--formerly called "type acceptance." In a September 19 letter to Extra licensee Sidney Lee Martin, KD4YBC, Hollingsworth reiterated an earlier FCC warning to Martin that he cease commercial marketing of non-certificated external RF amplifiers and amplifier kits capable of operating below 144 MHz.

In 1978, the FCC banned the manufacture and sale of any external RF amplifier or amplifier kit capable of operating below 144 MHz without a

grant of certification from the FCC. The rules specifically prohibit manufacture and sale of amps that operate between 24 and 35 MHz as a means to stem the flow of illegal Citizens Band amplifiers.

The case arose from a February 11, 2000, warning to Martin from the FCC's Detroit office as a result of a classified ad Martin had run in QST. The ad featured the sale of external Amateur Radio RF amplifier kits for HF and 6 meters. The FCC letter admonished Martin that selling or offering such units for sale violated Section 2.815 of the FCC's rules.

Martin--who operated a one-man business called RF Electronics in South Carolina--countered with his interpretation that he was allowed, under FCC Part 97 Amateur Service rules, to sell such kits as one amateur to another under an exception to the certification rules. Martin argued that Section 97.315 of the Amateur Service rules permitted his licensed customers to purchase from him--as another licensee--and construct or modify one model of a non-certificated RF power amp or kit per calendar year for that licensee's personal use.

The FCC rejected that analysis, however. Hollingsworth emphasized that Section 2.815(c) of the FCC's rules requires all external RF power amplifier kits that can operate below 144 MHz after assembly be FCC-certificated before they can be made, sold, leased, marketed, imported, shipped or distributed. He noted that other provisions of Section 2.815 apply only to certain already fabricated amplifiers and do not exempt amplifier kits, particularly those capable of operating between 24 and 35 MHz after assembly.

Hollingsworth said Section 97.315 also "specifically prohibits the use in the Amateur Service of an amplifier that the operator had constructed from a non-certified kit." He also noted that, in addition to kits, Martin's RF Electronics Web site had been selling non-certificated, assembled RF power amplifiers for use below 144 MHz. Hollingsworth said at least three of the assembled models were advertised as operational between 24 and 35 MHz.

Hollingsworth said FCC rules permit an individual amateur to construct or modify a non-certificated RF power amplifier once per calendar year for use at that amateur's own station--although the unit may not be built from a kit--and the amateur may then sell the amplifier to another licensee or dealer. The rules do not provide for mass marketing or manufacturing and marketing kits or assembled amplifiers as part of a business, Hollingsworth said. He added that the FCC would prosecute any violations and take enforcement action against Martin's amateur license.

Martin's Web site no longer offers any RF amplifiers for sale.

==>CINCINNATI HOSTS 2001 DIGITAL COMMUNICATIONS CONFERENCE

Despite reduced attendance in the aftermath of the September 11 terrorist attacks, the 2001 Digital Communications Conference forged ahead in Cincinnati, Ohio, September 21-23. The conference was co-sponsored by the ARRL and TAPR--Tucson Amateur Packet Radio.

At the Friday afternoon Automatic Position Reporting System (APRS) symposium, Byon Garrabrant, N6BG, introduced the Tiny Trak II, a miniature TNC designed for portable applications. Its innovative features include "Smart Beaconing" in which the Tiny Trak increases the beacon rate automatically according to the speed the tracked object--such as an automobile--is moving.

Smart Beaconing also attempts to detect when the moving object makes a sudden course change and immediately sends a beacon to update the position. During public service events where many APRS stations are active in the same area, the Tiny Trak II provides a means to assign precise beacon intervals to each station to minimize interference.

Steve Bible, N7HPR, updated the audience on the evolution of the Easy Trak antenna rotator controller. He raised eyebrows when he introduced the Easy Trak Jr, a truly tiny rotator controller approximately the size of a human thumb. It's designed to plug into any PC serial port. Bible says the Easy Trak Jr should be available by year's end and sell for under $100.

Saturday forums ranged from a satellite seminar courtesy of Steve Coy, K8UD to a humorous CirCad presentation by Jay Craswell, W0VNE. QST Editor Steve Ford, WB8IMY, discussed PSK31 and other innovative digital communications modes in two separate seminars Saturday afternoon. Bible and Gary Barbour, AC4DL, offered back-to-back forums on software-defined radios, DSP and digital voice.

At the Saturday banquet, Tony Curtis, K3RXK, spoke on the history of Amateur Radio in space. Curtis noted that the first Amateur Radio satellite--OSCAR 1--was launched nearly 40 years ago. Amateur satellite enthusiasts now are looking toward the possibility of landing a communications package on the lunar surface or even on Mars, he said.

The 2002 Digital Communications Conference will be held in Denver, Colorado.

==>USTTI CLASS OF 2001 LEARNS ABOUT AMATEUR RADIO

Students from five African nations and an observer from Canada recently attended the United States Telecommunications Training Institute/International Amateur Radio Union course on Amateur Radio administration at ARRL Headquarters. The course was held September 26-28.

Coordinated by USTTI and presented jointly by IARU and ARRL staffers, the program covers--among other topics--the International Telecommunication Union and ITU regulations, the IARU, spectrum management, emergency communication, digital communication, satellites, electromagnetic interference, international licensing, and Amateur Radio testing and licensing.

The trainees also constructed a simple 40-meter receiver in the ARRL Lab.

Attending this year's session were Samson Nyatia of Uganda, Davie Mulambia of Zambia, Mohamed Ouhamou of Morocco, Aron Kilangwa of Tanzania, Adeyinka Odunsi of Nigeria, and Daniel Lamoureux, VE2KA, of Montreal, Canada. Lamoureux, an international member of ARRL, monitored the course and plans

to teach it in French at a later date. All of the students are in occupations in their home countries that involve the use of telecommunications.

Teaching the majority of the Amateur Radio Administration Course were ARRL Technical Relations Manager Paul Rinaldo, W4RI, and Technical Relations Specialist Jon Siverling, WB3ERA, and ARRL Volunteer Examiner Coordinator Manager Bart Jahnke, W9JJ.

Assisting from the ARRL Laboratory staff were Lab Supervisor Ed Hare, W1RFI; RFI Engineer John Phillips, K2QAI, and Test Engineer Mike Tracy, KC1SX. Assistant to the Executive Vice President Lisa Kustosik, KA1UFZ, served as USTTI coordinator.

For more information, visit the USTTI Web site, <http://ustti.org/>.

==>SOLAR UPDATE

Propagation wizard Tad Cook, K7VVV, Seattle, Washington, reports: Solar flux and sunspot numbers were lower this week. This is no surprise, because the flux had reached a new high for this solar cycle during the previous week. Average daily sunspot numbers dropped more than 45 points and solar flux was down more than 25 points.

Indicators that did not drop were those tied to geomagnetic stability. Average daily planetary A index increased by 16 points to 29.6. The most active days were Monday through Wednesday, when the planetary A index was 50, 43 and 53. Planetary K index reached a high of 7 on Wednesday, indicating a geomagnetic storm. For higher latitudes the peak day for geomagnetic activity was Tuesday, when Alaska's College A index was 82, and the College K index reached 8.

The geomagnetic activity was caused by a series of solar wind disturbances. In addition to absorption of HF signals over high latitude paths, there were some impressive aurora displays.

Current predictions project solar flux decreasing to 185 on Friday, then increasing to 190 on Saturday and 195 on Sunday and Monday. Geomagnetic indices should be quiet to unsettled. The Next peak in solar flux is projected around October 22 or 23. Flux values are expected to rise above 200 after October 14 and above 250 after October 19.

Sunspot numbers for September 27 through October 3 were 279, 234, 233, 230, 289, 236 and 196, with a mean of 242.4. The 10.7-cm flux was 269.5, 284.5, 239.5, 235.8, 216.5, 200.9 and 191.7, with a mean of 234.1. Estimated planetary A indices were 10, 13, 21, 17, 50, 43 and 53 with a mean of 29.6.

==>IN BRIEF:

* This weekend on the radio: The TARA PSK31 Rumble, the Oceania DX Contest (SSB), the Arkansas and California QSO parties, the EU Autumn Sprint (SSB),

the QCWA QSO Party, the RSGB 21/28 MHz Contest (SSB) are the weekend of October 6-7. The 10-10 Day Sprint is October 10, and the YLRL Anniversary Party (CW) is October 10-12. JUST AHEAD: The ARRL International EME Competition, the 902 MHz and Above Fall Sprint, the Oceania DX Contest (CW), the EU Autumn Sprint (CW), the Pennsylvania QSO Party, the FISTS Fall Sprint, the Iberoamericano Contest, and the North American Sprint (RTTY) are the weekend of October 13-14. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Texas ARES/RACES teams activate following bridge collapse: Disaster struck in South Texas early on the morning of September 15 when a 240-foot section of the Queen Isabella Causeway between South Padre Island and Port Isabel, Texas, collapsed after barges slammed into the bridge supports. The mishap sent several vehicles plummeting into the water 80 feet below and claimed 11 lives. The Texas Department of Public Safety contacted John Teer, AK5Z, to request Amateur Radio assistance with communications, because all phone lines between South Padre Island and the mainland had been severed. "I called around to get volunteers to place on the Island EOC and the Port Isabell EOC," Teer reports. The DPS provided boat transportation to the Island for an operator. "We provided 2-meter communication for government and Red Cross officials on Saturday and Sunday until landline telephone and cell phone communications could be re-established," Teer said. Participating in addition to Teer were Pat Patterson, N5SLI, Virginia Scarth, KC5SAM, Ed Scarth, W8AHU, and Gregg Sargent, KA0ARS.

* FCC to dismiss filings submitted on outdated Form 605: The FCC's Wireless Telecommunications Bureau has announced that, starting Monday, October 15, it will dismiss all submittals it receives on Form 605 Quick-Form Application for Authorization in the Ship, Aircraft, Amateur, Restricted and Commercial Operator, and General Mobile Radio Service that bear edition dates prior to March 2001. This change does not affect applicants filing on-line via the Universal Licensing System (ULS). WTB encourages applicants to use ULS to speed application processing and to have access to the other information available via the ULS. The FCC advises that amateurs can avoid problems by submitting on-line application via the FCC's Universal Licensing System Web site, <http://www.fcc.gov/wtb/uls>. To obtain a current copy of Form 605, visit the FCC "Forms" page, <http://www.fcc.gov/wtb/csinfo/orderfrm.html>. Paper copies of Form 605 also are available from the FCC Forms Distribution Center, 800-418-3676.--FCC

* W1AW completes installation of AO-40 antennas: Maxim Memorial Station W1AW is now 100% AO-40 ready. XX Towers Inc--the ARRL tower service contractor--recently completed the installation of satellite antennas and an az-el rotator atop the center tower on W1AW's antenna farm. The array consists of a 2-meter 20-element crossed Yagi, a 70-cm 15-element crossed Yagi, a 23-cm 23-element Yagi and a 13-cm 17-turn helix. W1AW Station Manager Joe Carcia, NJ1Q, says he's been able to copy downlink telemetry but has yet to make a QSO via AO-40, primarily due to conflicts between the station's bulletin transmission schedule and the availability of AO-40.

* Antenna articles sought: ARRL Antenna Compendium Editor Dean Straw, N6BV, is seeking additional, fresh antenna articles for volume 7 of the Compendium. The popular Compendium book series features previously unpublished articles dealing with antennas, transmission lines and propagation. The deadline to submit manuscripts is January 31, 2002. For more information or to submit article manuscripts, contact Dean Straw, 5328 Fulton St, San Francisco, CA 94121; n6bv@....

* Vertex Standard donates loaned gear to Virginia ARES: Vertex Standard (Yaesu) has donated several pieces of Amateur Radio gear to Virginia ARES. The manufacturer had arranged to loan an FT-7100 transceiver with power supply and the three VX-5 hand-held transceivers during the Virginia ARES response to assist the Salvation Army at the Pentagon attack site. When Virginia SEC Tom Gregory, N4NW, e-mailed to thank Vertex Standard and to inquire about returning the equipment, Vertex Standard Executive Vice President Mikio Maruya, WA6F told him that Virginia ARES was welcome to keep it on hand for future emergencies. "We hope it will provide you with long and lasting use for all your emergency needs," Maruya said. "We were happy to assist in this emergency effort." Gregory said the Vertex Standard gear "allowed us to meet the needs of providing continuous Amateur Radio support to the Salvation Army." The Woodbridge, Virginia, Ham Radio Outlet store cooperated in providing the Virginia ARES team with the needed equipment on September 13.

* Wisconsin antenna bill clears Assembly: The pending Wisconsin Amateur Radio antenna (PRB-1) bill, AB-368, was approved by the Wisconsin Assembly October 2 on a voice vote. There was no debate. The measure now heads to the Wisconsin Senate. Many Wisconsin hams reportedly had called or e-mailed their Assembly representatives prior to the vote. The bill's Senate sponsor is Sen Fred Risser. The measure will be referred to a Senate committee and another public hearing will be held. Information on how to contact Wisconsin lawmakers is available via the Badger State Smoke Signals Web site, <http://www.bsss.org.>. A copy of the pending legislation is on the Wisconsin Legislature Web site, <http://www.legis.state.wi.us/2001/data/AB-368.pdf>.

* Hosts sought for 2002 USA Amateur Radio Direction Finding Championships: The final call has been issued for clubs, club councils and non-club groups interested in hosting the second USA ARDF Championships in 2002. "This call comes now, because the event must take place in the spring or early summer, in order to serve as a qualifying event as Team USA forms for the 2002 ARDF World Championships in Slovakia," explained ARRL ARDF Coordinator Joe Moell, K0OV. One proposal already been received for a "weekend championship" next April. Other proposals are welcome, and preliminary indications of intent should be submitted by October 15 via e-mail or US mail to Joe Moell, K0OV, PO Box 2508, Fullerton, CA 92837; homingin@.... The first USA Amateur Radio Direction Finding Championships were held August 1-3 in Albuquerque, New Mexico <http://www.arrl.org/news/features/2001/08/24/1/>. For more information on Amateur Radio Direction Finding, visit Moell's Homing In Web site, <http://www.homingin.com>.

* Clarence E. Sharp, K5DX, SK: Internationally known DXer and contester Clarence E. Sharp, K5DX, of Highlands, Texas, died September 3 following a long illness. He was 80. First licensed in 1946 as W5NMA, Sharp--who became known by his last name--soon was chasing DX with homebrew transmitters and antennas and a military surplus receiver. His welding skills--developed from his years as a machinist--came in handy when he built his own 80-foot freestanding tower from scrap steel pipe. Later antenna designs involved multi-element, multi-band cubical quads and towers up to 140 feet. His antenna farms of the 1950s and 1960s are the stuff of legend in DX and contesting circles. An ARRL member, Sharp was on the DXCC Honor Roll with 379 entities (mixed). Sharp also was an accomplished contester on SSB and CW, plying his skills in various operating events. Survivors include his wife, Irma, and three sons.

* AMSAT-NA Symposium to feature special event station: Special event station W4O will be on the air from the 2001 AMSAT-NA Symposium and Annual Meeting, October 5-7, in Atlanta. Conference Chair Steve Diggs, W4EPI, says W4O will be active on HF, satellite, local FM voice and APRS. Kenwood National Sales Manager Paul Middleton, K4NUH, will speak at the Saturday night banquet on October 6. The subject of his presentation will be "Amateur Radio--Hobby and Industry." Additional details about W4O and the 2001 AMSAT-NA Symposium in Atlanta, Georgia, are on the AMSAT-NA Web site, <http://www.amsat.org/amsat/symposium>. Proceedings of the AMSAT-NA 19th Space Symposium and AMSAT-NA Annual Meeting are available from ARRL for $20. Visit the ARRL Products Catalog, <http://www.arrl.org/catalog/?item=8535>.

* New URL for ARRL Northwestern Division Web site: The ARRL Northwestern Division Web site has a new address, effective this week. The new Web address is http://www.nwarrl.org. Glenn Moore, N7VBW, is the Webmaster.

* ZK1NDK North Cook Island operation now good for DXCC credit: ARRL DXCC Manager Bill Moore, NC1L, has announced approval of ZK1NDK, North Cook Island, for DXCC credit. Documentation now has been reviewed and okayed for DXCC credit. Those who submitted ZK1NDK previously and were denied credit may contact DXCC <dxcc@...>, and have their records updated without having to resubmit cards.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; http://www.arrl.org. Jim Haynie, W5JBP, President

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb at http://www.arrl.org for the latest news, updated as it happens. The ARRLWeb Extra at http://www.arrl.org/members-only/extra offers ARRL members access to informative features and columns.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

346. The ARRL Letter, Vol 20, No 40

The ARRL Letter
Vol. 20, No. 40
October 5, 2001
***************

IN THIS EDITION:

* +Amateur Radio volunteers still needed in NYC
* +Three new ham satellites now in orbit
* +FCC plans CORES "mass conversion" for ULS registrants
* +AO-40's GPS experiment deemed a success
* +Enforcement case highlights FCC certification rules
* +Digital conference offers insight on newest technology
* +USTTI students learn about ham radio
* Solar Update
* IN BRIEF:
This weekend on the radio
+Texas ARES/RACES teams activate following bridge collapse
FCC to dismiss filings submitted on outdated Form 605
W1AW completes installation of AO-40 antennas
Antenna articles sought
Vertex Standard donates loaned gear to Virginia ARES
Wisconsin antenna bill clears Assembly
Hosts sought for 2002 USA Amateur Radio Direction Finding Championships
Clarence E. Sharp, K5DX, SK
AMSAT-NA Symposium to feature special event station
New URL for ARRL Northwestern Division Web site
ZK1NDK North Cook Island operation now good for DXCC credit

+Available on ARRL Audio News

============================================================

==>SALVATION ARMY STILL NEEDS HAM VOLUNTEERS IN NEW YORK CITY

Although the Salvation Army has cut one shift of radio operators to support
the organization's World Trade Center relief operation in New York City, it
still needs fresh Amateur Radio volunteers. "We are still short of people,"
said Jeff Schneller, N2HPO--who's coordinating the Salvation Army Team
Emergency Response Network, or SATERN, operation.

The midnight to 8 AM shift has been suspended, but SATERN still needs six
Amateur Radio operators per shift--a total of 12 per day--for the indefinite
future. Schneller said the SATERN volunteers who have been there the longest
now "are getting weary."
```

SATERN needs operators at the Kennedy Airport warehouse with their own base station set up from about 8 AM until about 9 PM--possibly broken into shifts. In addition, SATERN needs operators to ride with trucks to provide communication. Operators start and end shifts at Salvation Army Division HQ on 14th Street in Manhattan, which also needs operators.

Schneller said the word he has from Salvation Army is that the organization is happy with the Amateur Radio support it's been getting. "They want us to keep going," he said. So far, he said, some 40 Amateur Radio operators have turned out to help support the Salvation Army relief effort--some from the New York City area but others from as far away as Missouri, North Carolina, Georgia and Florida.

"Response from around the nation and the world has been heartwarming," Schneller said, "especially those amateur operators who were willing to put their life on hold, so that they could come help out for a few days or weeks in NYC."

Schneller requested that potential volunteers contact him directly: Home, 718-461-0370; Cell, 917-226-1339; Page, 718-939-3939 (give message to operator); Ham radio, Call N2HPO on the 147.270 repeater (141.3 or 127.3 CTCSS).

The Salvation Army said this week it's sending additional personnel from the Midwest to New York City to assist those who have been on duty since September 11. Members will offer grief counseling, coordinate food service, be on-site in Salvation Army emergency disaster vehicles and organize supplies and volunteers.

==>KODIAK STAR LAUNCH IS A SUCCESS

Following several delays, the Kodiak Star launch vehicle took off into space from Alaska early Sunday, September 30 UTC. The Athena I rocket boosted three Amateur Radio payloads and PICOSat--a technology demonstration satellite--into orbit. Initial indications were that all satellites deployed properly and were being monitored on the ground. The payloads included the APRS-equipped PCsat, built by midshipmen from the US Naval Academy under the guidance of Bob Bruninga, WB4APR, the acknowledged "father of APRS."

PCsat is a 1200-baud APRS digipeater designed for use by amateurs using hand-held transceivers or mobiles. PCsat is transmitting 1200 baud AFSK telemetry on 145.825 MHz, but the satellite has not yet been commissioned for general amateur use. "We ask that users please wait while we get the system loaded," Bruninga said.

PCsat's downlink has been heard around the world, with reports logged from Alaska and Hawaii as well as from South Africa, Europe, Africa and even Antarctica.

Carried into space in addition to PCsat were the Starshine 3 and Sapphire payloads. Starshine3 is a "disco" mirror ball with 9600 baud telemetry on 145.825. Sapphire has 1200-baud telemetry and a voice replay on 437.1 MHz. Starshine 3's mirror ball is visible to the naked eye for earthbound

students to track. Chip Margelli, K7JA, spotted the satellite October 2 on the West Coast. "Starshine was at least as bright as Mars," he reported. "Very impressive!"

Sapphire is a joint effort between the Naval Academy's Small Satellite Program, Stanford University and Washington University at St. Louis. Starshine is a NASA payload.

The Kodiak Star launch--the first orbital mission from the Kodiak launch complex--had to be delayed several times--most recently due to high solar flare activity this past week. Earlier delays resulted from unsuitable weather conditions, a problem with a tracking radar, and travel delays because of the recent air traffic shutdown following the September 11 terrorist attacks.

For more information, visit the PCsat Web site, <http://web.usna.navy.mil/~bruninga/pcsat.html>. For more information on Sapphire, visit the Stanford University Space Systems Development Laboratories Web site, <http://ssdl.stanford.edu/aa/projects/squirt1/sapphire_overview.html>. The Starshine Web site is <http://www.azinet.com/starshine/>

==>CORES/FRN "MASS CONVERSION" PLANNED FOR ULS REGISTRANTS

Before the switchover to mandatory Commission Registration System (CORES) registration on December 3, 2001, the FCC plans to do a "mass conversion" from its Universal Licensing System (ULS) database.

Once CORES becomes mandatory in December, everyone doing business with the FCC--licensed or not--must obtain and use a 10-digit FCC Registration Number--or FRN. The FCC called the move is "a first step" toward streamlining fee collection and tracking. Many amateurs registered with the ULS were assigned an FRN by CORES in a mass conversion last year. Affected amateurs were notified by mail.

An FCC Wireless Telecommunications Bureau spokesperson told ARRL this week that another mass conversion will be done prior to December. As a result, anyone who has registered a Taxpayer Identification Number--typically an individual's Social Security Number--with the FCC will be assigned an FRN, which will appear in the FCC amateur database.

The requirement to obtain an FRN extends to applicants for an Amateur Radio license as well as to anyone required to pay a fee to the FCC, such as those applying for a vanity call sign. An FRN will not be needed to file comments in rulemaking proceedings, however.

Amateur Service licensees not already registered in the ULS are encouraged to register their TINs soon, to save the step of a second CORES registration after December 3. To register, visit the FCC's ULS Web site <http://www.fcc.gov/wtb/uls> and click on "Register TIN/Call Sign." (NOTE: The Universal Licensing System will be down for scheduled maintenance from 10 PM Eastern Time Friday, October 5, until 8 AM Eastern Time Monday,

October 8.)

The FCC established CORES last year and has been in the process of implementing it. The FCC's Wireless Telecommunications Bureau concedes that a lot of issues remain undecided regarding how CORES/FRN will work for the Amateur Service. For more information on CORES/FRN, visit the FCC CORES Web site <https://svartifoss2.fcc.gov/cores/CoresHome.html>.

==>AO-40 SUCCESSFULLY TESTS GPS EXPERIMENT

AMSAT News Service reports that the GPS experiment on the AO-40 satellite has undergone successful testing. The experiment--supplied and sponsored by NASA--is designed to determine if it is possible to get positional data while outside of the GPS ring of satellites.

"We received a signal on the apogee receiver from about 52,000 km out with good signal levels," said Jim White, WD0E, who's been the AMSAT coordinator and chief operator for this activity. "Further data is being gathered and those downloaded so far are being analyzed."

There are two GPS receivers on AO-40, A and B. The A receiver is for receiving signals while in the vicinity of apogee--when the satellite is farthest from Earth. The B receiver provides signal reception in the vicinity of perigee--when the satellite is closest to Earth. Both receivers are operational, and data are passed from the receivers through the RUDAK digital transponder to the S-band transmitter.

AMSAT-VP for Human Spaceflight Programs Frank Bauer, KA3HDO, was instrumental in setting up the GPS experiment. "If this experiment goes the way I expect, it will revolutionize the way we use GPS in space," Bauer said. "Many future HEO (high Earth orbit) spacecraft will be able to take advantage of GPS for autonomous navigation and station keeping."

Earlier this month, AO-40 ground controllers successfully tested the spacecraft's 24-GHz transmitter. The K-band transmitter on 24.048 GHz was activated September 9 on orbit 396 and connected to the passband and beacon inputs that feed the S2 (2.4 GHz) transmitter.

For more information on AO-40, visit the AMSAT-NA Web site, <http://www.amsat.org>.

==>ENFORCEMENT CASE HIGHLIGHTS FCC CERTIFICATION RULES

The FCC's Riley Hollingsworth used the occasion of a recent Warning Notice to hammer home the FCC's position on the sale of RF amplifiers that have not received FCC certification--formerly called "type acceptance." In a September 19 letter to Extra licensee Sidney Lee Martin, KD4YBC, Hollingsworth reiterated an earlier FCC warning to Martin that he cease commercial marketing of non-certificated external RF amplifiers and amplifier kits capable of operating below 144 MHz.

In 1978, the FCC banned the manufacture and sale of any external RF amplifier or amplifier kit capable of operating below 144 MHz without a

grant of certification from the FCC. The rules specifically prohibit manufacture and sale of amps that operate between 24 and 35 MHz as a means to stem the flow of illegal Citizens Band amplifiers.

The case arose from a February 11, 2000, warning to Martin from the FCC's Detroit office as a result of a classified ad Martin had run in QST. The ad featured the sale of external Amateur Radio RF amplifier kits for HF and 6 meters. The FCC letter admonished Martin that selling or offering such units for sale violated Section 2.815 of the FCC's rules.

Martin--who operated a one-man business called RF Electronics in South Carolina--countered with his interpretation that he was allowed, under FCC Part 97 Amateur Service rules, to sell such kits as one amateur to another under an exception to the certification rules. Martin argued that Section 97.315 of the Amateur Service rules permitted his licensed customers to purchase from him--as another licensee--and construct or modify one model of a non-certificated RF power amp or kit per calendar year for that licensee's personal use.

The FCC rejected that analysis, however. Hollingsworth emphasized that Section 2.815(c) of the FCC's rules requires all external RF power amplifier kits that can operate below 144 MHz after assembly be FCC-certificated before they can be made, sold, leased, marketed, imported, shipped or distributed. He noted that other provisions of Section 2.815 apply only to certain already fabricated amplifiers and do not exempt amplifier kits, particularly those capable of operating between 24 and 35 MHz after assembly.

Hollingsworth said Section 97.315 also "specifically prohibits the use in the Amateur Service of an amplifier that the operator had constructed from a non-certified kit." He also noted that, in addition to kits, Martin's RF Electronics Web site had been selling non-certificated, assembled RF power amplifiers for use below 144 MHz. Hollingsworth said at least three of the assembled models were advertised as operational between 24 and 35 MHz.

Hollingsworth said FCC rules permit an individual amateur to construct or modify a non-certificated RF power amplifier once per calendar year for use at that amateur's own station--although the unit may not be built from a kit--and the amateur may then sell the amplifier to another licensee or dealer. The rules do not provide for mass marketing or manufacturing and marketing kits or assembled amplifiers as part of a business, Hollingsworth said. He added that the FCC would prosecute any violations and take enforcement action against Martin's amateur license.

Martin's Web site no longer offers any RF amplifiers for sale.

==>CINCINNATI HOSTS 2001 DIGITAL COMMUNICATIONS CONFERENCE

Despite reduced attendance in the aftermath of the September 11 terrorist attacks, the 2001 Digital Communications Conference forged ahead in Cincinnati, Ohio, September 21-23. The conference was co-sponsored by the ARRL and TAPR--Tucson Amateur Packet Radio.

At the Friday afternoon Automatic Position Reporting System (APRS) symposium, Byon Garrabrant, N6BG, introduced the Tiny Trak II, a miniature TNC designed for portable applications. Its innovative features include "Smart Beaconing" in which the Tiny Trak increases the beacon rate automatically according to the speed the tracked object--such as an automobile--is moving.

Smart Beaconing also attempts to detect when the moving object makes a sudden course change and immediately sends a beacon to update the position. During public service events where many APRS stations are active in the same area, the Tiny Trak II provides a means to assign precise beacon intervals to each station to minimize interference.

Steve Bible, N7HPR, updated the audience on the evolution of the Easy Trak antenna rotator controller. He raised eyebrows when he introduced the Easy Trak Jr, a truly tiny rotator controller approximately the size of a human thumb. It's designed to plug into any PC serial port. Bible says the Easy Trak Jr should be available by year's end and sell for under $100.

Saturday forums ranged from a satellite seminar courtesy of Steve Coy, K8UD to a humorous CirCad presentation by Jay Craswell, W0VNE. QST Editor Steve Ford, WB8IMY, discussed PSK31 and other innovative digital communications modes in two separate seminars Saturday afternoon. Bible and Gary Barbour, AC4DL, offered back-to-back forums on software-defined radios, DSP and digital voice.

At the Saturday banquet, Tony Curtis, K3RXK, spoke on the history of Amateur Radio in space. Curtis noted that the first Amateur Radio satellite--OSCAR 1--was launched nearly 40 years ago. Amateur satellite enthusiasts now are looking toward the possibility of landing a communications package on the lunar surface or even on Mars, he said.

The 2002 Digital Communications Conference will be held in Denver, Colorado.

==>USTTI CLASS OF 2001 LEARNS ABOUT AMATEUR RADIO

Students from five African nations and an observer from Canada recently attended the United States Telecommunications Training Institute/International Amateur Radio Union course on Amateur Radio administration at ARRL Headquarters. The course was held September 26-28.

Coordinated by USTTI and presented jointly by IARU and ARRL staffers, the program covers--among other topics--the International Telecommunication Union and ITU regulations, the IARU, spectrum management, emergency communication, digital communication, satellites, electromagnetic interference, international licensing, and Amateur Radio testing and licensing.

The trainees also constructed a simple 40-meter receiver in the ARRL Lab.

Attending this year's session were Samson Nyatia of Uganda, Davie Mulambia of Zambia, Mohamed Ouhamou of Morocco, Aron Kilangwa of Tanzania, Adeyinka Odunsi of Nigeria, and Daniel Lamoureux, VE2KA, of Montreal, Canada. Lamoureux, an international member of ARRL, monitored the course and plans

to teach it in French at a later date. All of the students are in occupations in their home countries that involve the use of telecommunications.

Teaching the majority of the Amateur Radio Administration Course were ARRL Technical Relations Manager Paul Rinaldo, W4RI, and Technical Relations Specialist Jon Siverling, WB3ERA, and ARRL Volunteer Examiner Coordinator Manager Bart Jahnke, W9JJ.

Assisting from the ARRL Laboratory staff were Lab Supervisor Ed Hare, W1RFI; RFI Engineer John Phillips, K2QAI, and Test Engineer Mike Tracy, KC1SX. Assistant to the Executive Vice President Lisa Kustosik, KA1UFZ, served as USTTI coordinator.

For more information, visit the USTTI Web site, <http://ustti.org/>.

==>SOLAR UPDATE

Propagation wizard Tad Cook, K7VVV, Seattle, Washington, reports: Solar flux and sunspot numbers were lower this week. This is no surprise, because the flux had reached a new high for this solar cycle during the previous week. Average daily sunspot numbers dropped more than 45 points and solar flux was down more than 25 points.

Indicators that did not drop were those tied to geomagnetic stability. Average daily planetary A index increased by 16 points to 29.6. The most active days were Monday through Wednesday, when the planetary A index was 50, 43 and 53. Planetary K index reached a high of 7 on Wednesday, indicating a geomagnetic storm. For higher latitudes the peak day for geomagnetic activity was Tuesday, when Alaska's College A index was 82, and the College K index reached 8.

The geomagnetic activity was caused by a series of solar wind disturbances. In addition to absorption of HF signals over high latitude paths, there were some impressive aurora displays.

Current predictions project solar flux decreasing to 185 on Friday, then increasing to 190 on Saturday and 195 on Sunday and Monday. Geomagnetic indices should be quiet to unsettled. The Next peak in solar flux is projected around October 22 or 23. Flux values are expected to rise above 200 after October 14 and above 250 after October 19.

Sunspot numbers for September 27 through October 3 were 279, 234, 233, 230, 289, 236 and 196, with a mean of 242.4. The 10.7-cm flux was 269.5, 284.5, 239.5, 235.8, 216.5, 200.9 and 191.7, with a mean of 234.1. Estimated planetary A indices were 10, 13, 21, 17, 50, 43 and 53 with a mean of 29.6.

==>IN BRIEF:

* This weekend on the radio: The TARA PSK31 Rumble, the Oceania DX Contest (SSB), the Arkansas and California QSO parties, the EU Autumn Sprint (SSB),

the QCWA QSO Party, the RSGB 21/28 MHz Contest (SSB) are the weekend of October 6-7. The 10-10 Day Sprint is October 10, and the YLRL Anniversary Party (CW) is October 10-12. JUST AHEAD: The ARRL International EME Competition, the 902 MHz and Above Fall Sprint, the Oceania DX Contest (CW), the EU Autumn Sprint (CW), the Pennsylvania QSO Party, the FISTS Fall Sprint, the Iberoamericano Contest, and the North American Sprint (RTTY) are the weekend of October 13-14. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Texas ARES/RACES teams activate following bridge collapse: Disaster struck in South Texas early on the morning of September 15 when a 240-foot section of the Queen Isabella Causeway between South Padre Island and Port Isabel, Texas, collapsed after barges slammed into the bridge supports. The mishap sent several vehicles plummeting into the water 80 feet below and claimed 11 lives. The Texas Department of Public Safety contacted John Teer, AK5Z, to request Amateur Radio assistance with communications, because all phone lines between South Padre Island and the mainland had been severed. "I called around to get volunteers to place on the Island EOC and the Port Isabell EOC," Teer reports. The DPS provided boat transportation to the Island for an operator. "We provided 2-meter communication for government and Red Cross officials on Saturday and Sunday until landline telephone and cell phone communications could be re-established," Teer said. Participating in addition to Teer were Pat Patterson, N5SLI, Virginia Scarth, KC5SAM, Ed Scarth, W8AHU, and Gregg Sargent, KA0ARS.

* FCC to dismiss filings submitted on outdated Form 605: The FCC's Wireless Telecommunications Bureau has announced that, starting Monday, October 15, it will dismiss all submittals it receives on Form 605 Quick-Form Application for Authorization in the Ship, Aircraft, Amateur, Restricted and Commercial Operator, and General Mobile Radio Service that bear edition dates prior to March 2001. This change does not affect applicants filing on-line via the Universal Licensing System (ULS). WTB encourages applicants to use ULS to speed application processing and to have access to the other information available via the ULS. The FCC advises that amateurs can avoid problems by submitting on-line application via the FCC's Universal Licensing System Web site, <http://www.fcc.gov/wtb/uls>. To obtain a current copy of Form 605, visit the FCC "Forms" page, <http://www.fcc.gov/wtb/csinfo/orderfrm.html>. Paper copies of Form 605 also are available from the FCC Forms Distribution Center, 800-418-3676.--FCC

* W1AW completes installation of AO-40 antennas: Maxim Memorial Station W1AW is now 100% AO-40 ready. XX Towers Inc--the ARRL tower service contractor--recently completed the installation of satellite antennas and an az-el rotator atop the center tower on W1AW's antenna farm. The array consists of a 2-meter 20-element crossed Yagi, a 70-cm 15-element crossed Yagi, a 23-cm 23-element Yagi and a 13-cm 17-turn helix. W1AW Station Manager Joe Carcia, NJ1Q, says he's been able to copy downlink telemetry but has yet to make a QSO via AO-40, primarily due to conflicts between the station's bulletin transmission schedule and the availability of AO-40.

* Antenna articles sought: ARRL Antenna Compendium Editor Dean Straw, N6BV, is seeking additional, fresh antenna articles for volume 7 of the Compendium. The popular Compendium book series features previously unpublished articles dealing with antennas, transmission lines and propagation. The deadline to submit manuscripts is January 31, 2002. For more information or to submit article manuscripts, contact Dean Straw, 5328 Fulton St, San Francisco, CA 94121; n6bv@....

* Vertex Standard donates loaned gear to Virginia ARES: Vertex Standard (Yaesu) has donated several pieces of Amateur Radio gear to Virginia ARES. The manufacturer had arranged to loan an FT-7100 transceiver with power supply and the three VX-5 hand-held transceivers during the Virginia ARES response to assist the Salvation Army at the Pentagon attack site. When Virginia SEC Tom Gregory, N4NW, e-mailed to thank Vertex Standard and to inquire about returning the equipment, Vertex Standard Executive Vice President Mikio Maruya, WA6F told him that Virginia ARES was welcome to keep it on hand for future emergencies. "We hope it will provide you with long and lasting use for all your emergency needs," Maruya said. "We were happy to assist in this emergency effort." Gregory said the Vertex Standard gear "allowed us to meet the needs of providing continuous Amateur Radio support to the Salvation Army." The Woodbridge, Virginia, Ham Radio Outlet store cooperated in providing the Virginia ARES team with the needed equipment on September 13.

* Wisconsin antenna bill clears Assembly: The pending Wisconsin Amateur Radio antenna (PRB-1) bill, AB-368, was approved by the Wisconsin Assembly October 2 on a voice vote. There was no debate. The measure now heads to the Wisconsin Senate. Many Wisconsin hams reportedly had called or e-mailed their Assembly representatives prior to the vote. The bill's Senate sponsor is Sen Fred Risser. The measure will be referred to a Senate committee and another public hearing will be held. Information on how to contact Wisconsin lawmakers is available via the Badger State Smoke Signals Web site, <http://www.bsss.org.>. A copy of the pending legislation is on the Wisconsin Legislature Web site, <http://www.legis.state.wi.us/2001/data/AB-368.pdf>.

* Hosts sought for 2002 USA Amateur Radio Direction Finding Championships: The final call has been issued for clubs, club councils and non-club groups interested in hosting the second USA ARDF Championships in 2002. "This call comes now, because the event must take place in the spring or early summer, in order to serve as a qualifying event as Team USA forms for the 2002 ARDF World Championships in Slovakia," explained ARRL ARDF Coordinator Joe Moell, K0OV. One proposal already been received for a "weekend championship" next April. Other proposals are welcome, and preliminary indications of intent should be submitted by October 15 via e-mail or US mail to Joe Moell, K0OV, PO Box 2508, Fullerton, CA 92837; homingin@.... The first USA Amateur Radio Direction Finding Championships were held August 1-3 in Albuquerque, New Mexico <http://www.arrl.org/news/features/2001/08/24/1/>. For more information on Amateur Radio Direction Finding, visit Moell's Homing In Web site, <http://www.homingin.com>.

* Clarence E. Sharp, K5DX, SK: Internationally known DXer and contester Clarence E. Sharp, K5DX, of Highlands, Texas, died September 3 following a long illness. He was 80. First licensed in 1946 as W5NMA, Sharp--who became known by his last name--soon was chasing DX with homebrew transmitters and antennas and a military surplus receiver. His welding skills--developed from his years as a machinist--came in handy when he built his own 80-foot freestanding tower from scrap steel pipe. Later antenna designs involved multi-element, multi-band cubical quads and towers up to 140 feet. His antenna farms of the 1950s and 1960s are the stuff of legend in DX and contesting circles. An ARRL member, Sharp was on the DXCC Honor Roll with 379 entities (mixed). Sharp also was an accomplished contester on SSB and CW, plying his skills in various operating events. Survivors include his wife, Irma, and three sons.

* AMSAT-NA Symposium to feature special event station: Special event station W4O will be on the air from the 2001 AMSAT-NA Symposium and Annual Meeting, October 5-7, in Atlanta. Conference Chair Steve Diggs, W4EPI, says W4O will be active on HF, satellite, local FM voice and APRS. Kenwood National Sales Manager Paul Middleton, K4NUH, will speak at the Saturday night banquet on October 6. The subject of his presentation will be "Amateur Radio--Hobby and Industry." Additional details about W4O and the 2001 AMSAT-NA Symposium in Atlanta, Georgia, are on the AMSAT-NA Web site, <http://www.amsat.org/amsat/symposium>. Proceedings of the AMSAT-NA 19th Space Symposium and AMSAT-NA Annual Meeting are available from ARRL for $20. Visit the ARRL Products Catalog, <http://www.arrl.org/catalog/?item=8535>.

* New URL for ARRL Northwestern Division Web site: The ARRL Northwestern Division Web site has a new address, effective this week. The new Web address is http://www.nwarrl.org. Glenn Moore, N7VBW, is the Webmaster.

* ZK1NDK North Cook Island operation now good for DXCC credit: ARRL DXCC Manager Bill Moore, NC1L, has announced approval of ZK1NDK, North Cook Island, for DXCC credit. Documentation now has been reviewed and okayed for DXCC credit. Those who submitted ZK1NDK previously and were denied credit may contact DXCC <dxcc@...>, and have their records updated without having to resubmit cards.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

347. Monthly Meeting,

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

The Monthly meeting for October 2001 shall be held on 14th October 2001 at Shishu Vihar School, Dader (E) at 10:00 hours sharp. The Agenda for the meeting is as under:-

1. Second Batch for Ham Radio Classes.
2. MARS Library.
3. New Letter.
4. Future events.
5. Disaster Communication Teams.

Please note that few days ago I had sent a mail for confimation of all the hams wanting to be on the Disaster communication teams (Field or Base). Many members have not given me their confirmation.

On this Sunday I will finalize the list , Members who have not give their choice or preference (Base Team / Field Team) will not be allowed to participate in future activities related to Disaster Communication (Simulation or Real).

348. resignation of the Chairman

Yahoo group: m_a_r_s
Date: 2001-10-13 08:11:25 UTC
From: m.a.r.s
Topic: 348 Message: 348

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

This is in reference to the resignation submitted by our chairman Mr.Mukesh Jaitley [VU2UGJ] dated 26/09/2001.

The Managing Committee understands the personal difficulties and problems faced by the chairman and also respects his sincerity to his post. In an ideal situation all the members of the Managing Committee are expected to work, But at times we find many of the managing committee are unable to keep up with the expectations. Under such circumstances most of the Managing Committee Members would have to resign for lack of performance.

But we have to run the society, we hope to increase the efficiency of the Managing Committee and the Members in whole in the near future [provided the members show some inclination].

You are hereby informed that the above resignation was not accepted by the Managing Committee during the Committee meeting held on 29th Sept 2001 and Mr.Mukesh Jaitley continues to be the Chairman of the Society.

Regards
For Mumbai Amateur Radio Society.

Nilesh Rathod,
Secretary.

Hi

Mumbai Amateur Radio Society in association with Maharashtra State
Scouts & Guides will participate in 43rd Jota in the coming weekend on
20th & 21st October 2001.we will be operative on International Jota
frequencies and also the following frequencies
7.035 mhz,14.260 mhz, & 21.260 mhz.
There will be in all 5 stations operating from Mumbai & Thane
VU2NLF--- Shishu Vihar High School ,Dadar
VU2HIT---- Scouts Guide Pavilion, Shivaji Park
VU2SXF--- Shriram Welfare High School ,Andheri
VU2JPN--- Suman Nagar High School , Chembur
VU2UGO--- Shanti Nagar High School , Mira Road

==>SATERN OPERATION MARKS ONE MONTH IN NEW YORK CITY

One month into its disaster relief support operation in New York City,
Salvation Army Team Emergency Response Network (SATERN) volunteers are
holding up well. SATERN Amateur Radio Liaison Officer Jeff Schneller, N2HPO,
says the operation could run for several more weeks.

"Our current team of Amateur Radio operators is doing a fantastic job,"
Schneller said. "The operation is going great!"

SATERN is now "making do" with at least six Amateur Radio volunteers per
day, from about 9 AM until 11 PM, primarily to support the Salvation Army
World Trade Center canteen operations, although Schneller said an even dozen
for the two daily shifts would be ideal. SATERN last week eliminated its
overnight shift of radio operator volunteers. Operators have come from all
```

over, including New Hampshire, Ohio, North Carolina, Florida and Missouri. Schneller said he even had offers of help from England and Canada.

One operator, Janet Stonecipher, KC0IET, arrived on her own from Missouri three weeks ago. "Janet seems to want to stay for the duration but is overdue for rotation out," Schneller said. Another Missourian, Anna Balmer, arrived with a REACT team and stayed on. "She is here working with us under extreme circumstances," Schneller explained. "Her brother was killed in the Pentagon attack." He said two local groups--the Broadcast Employees Amateur Radio Society (BEARS) and the Electchester VHF Club have been providing exclusive use of their repeaters since Day One.

Schneller, who's in the fire alarm and sprinkler business, also has been involved from the start, and--with the understanding and support of his customers--has been logging some long hours. Carlos Varon, K2LCV, has been Schneller's backup and has taken over as scheduling coordinator for volunteers. Recently, however, Schneller has had to start paying more attention to his business again. Even so, he said, "most work days get cut short to resolve problems." Most employers seem to be supporting the volunteers, he added.

SATERN radio volunteers have been handling base station duties at Salvation Army Headquarters on 14th Street in Manhattan, working on roving patrols to check up on various Salvation Army canteen sites to see what might be needed, and providing communication at key field sites, aboard supply trucks and at the distribution warehouse. Along with physical nourishment, The Salvation Army is supplying emotional and spiritual sustenance at the World Trade Center disaster site through its two prayer centers.

"Thanks to all the Amateur Radio operators who have come to assist and made this a successful operation," Schneller said, adding that he also appreciated the many other offers to help. SATERN now is limiting its fresh volunteers to those available from the Greater New York City area.

Schneller strongly advised all Amateur Radio operators to prepare for the future by first getting acquainted with and joining their local ARES or SATERN teams, then by taking the ARRL Amateur Radio Emergency Communications Course <http://www.arrl.org/cce>. More information about SATERN is available on the SATERN Web site <http://www.satern.org>.

==>AMATEUR RADIO REPORTS TELL OF HURRICANE IRIS' DAMAGE

Amateur Radio reports this week told of severe damage from Hurricane Iris, as the storm struck the Central American nation of Belize. Reports gathered via the Hurricane Watch Net by W4EHW operators at the National Hurricane Center say Iris--subsequently downgraded to a tropical depression--destroyed houses and claimed more than a dozen lives.

After passing through the Caribbean as a Category 1 storm, Iris built into an extremely dangerous Category 4 hurricane with sustained winds of 140 MPH. Iris made landfall October 8 on the southern coast of Belize.

According to W4EHW Deputy Amateur Radio Coordinator Julio Ripoll, WD4JR, the net received reports via Bruce Miller, V31JU, of severe damage to the Placentia and Big Creek villages. Ripoll said the reports cited severe structural damage to all of the houses in Placentia and Big Creek--well-known as diving and fishing destinations for tourists and having a local population of about 1500 people. "Many houses are completely blown away," Miller was quoted as saying. "Most houses that had concrete block walls, had no roofs." No lives were lost, however.

Charter boats moored off Placentia fared much worse. Ripoll said the 120-foot Wave Dancer, a vessel that takes scuba enthusiasts on diving excursions, had capsized. Belize authorities later recovered the bodies of 19 victims, including 17 members of a Richmond, Virginia, diving club.

Ripoll said ham radio reports came from many V31 stations and from vessels trying to ride out the storm. One regular reporting station was Allison Barton, KF6HYJ/mm, aboard the 42-foot sailboat Dreamer near New Haven, Belize, with her husband, Mike. As Iris approached landfall, KF6HYJ/mm came on the air to report that the vessel had broken free of all four anchors and run aground. Although the sailboat sustained damage, the couple was reported to be safe and unharmed, Ripoll said.

Over the weekend, the Hurricane Watch Net and W4EHW's Amateur Radio Group received many live surface-weather reports from Jamaica, the Cayman Islands, Honduras, Roatan Island and Belize, as Iris tracked through the Caribbean, Ripoll said.

W4EHW and the Hurricane Watch Net first activated Saturday, October 6, and--with some breaks--stayed on the air through the early hours of Tuesday, October 9, on the HWN's 14.325 MHz frequency. W4EHW also received reports via the Internet. Forecasters use the real-time surface reports to help them predict a storm's path, intensity and damage potential.

==>ARRL MEMBERS' HELP NEEDED WITH CC&R EFFORT

ARRL is encouraging members to write their members of Congress in an effort to build awareness in Congress that private land-use regulations have become a real problem for many Amateur Radio operators. ARRL Legislative and Public Affairs Manager Steve Mansfield, N1MZA, says support from the amateur community will help to backstop the League's efforts to meet with elected representatives and staffers on Capitol Hill to discuss possible legislation.

"In the meantime, we continue to prowl the halls of Congress in search of supporters!" Mansfield said.

As condominium complexes and planned communities proliferate, covenants, conditions and restrictions, or CC&Rs, have become a growing obstacle to amateurs who want to erect antennas. At its July meeting, the ARRL Board of Directors adopted a goal of legislative action to help overcome the restrictions that CC&Rs impose on Amateur Radio antennas.

Amateurs who are affected by CC&Rs--or who know someone in their Congressional district who is--are invited to adapt the ARRL's sample letter to their own situations and consider sending it to their Congressional representative. A sample of the letter is on the ARRL Web site <http://www.arrl.org/govrelations/ccr-sample-letter.html>.

To find a Senator's mailing address, visit the US Senate Web site <http://www.senate.gov/contacting/index.cfm>. To find a Representative's mailing address, visit the US House of Representatives Web site, <http://www.house.gov/writerep/>.

Those writing are requested to share their correspondence with Steve Mansfield, N1MZA, Legislative and Public Affairs Manager, ARRL, 225 Main St, Newington, CT 06111; n1mza@....

==>FCC SAYS BAND PLANS DO MATTER

The FCC recently asked three amateurs to respond to complaints alleging that they deliberately transmitted SSB on top of CW stations operating in the vicinity of 1820 to 1825 kHz. The FCC has never designated mode-specific subbands in the 160-meter amateur band. Instead, operators are asked to voluntarily adhere to the ARRL band plan, revised this past summer, which recommends a lower limit of 1843 kHz for SSB operation.

In the wake of the complaints, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth wrote George Wehrung, W5TZ, and Dennis Clauder, KT5S--both of Texas--and Derrick Vogt, WA4TWM, of Kansas in mid-September. Hollingsworth asked each to respond to allegations from several other operators that their SSB transmissions deliberately interfered with attempts by others to operate on CW between 1820 and 1830 kHz. Copies of the complaints were sent to all three operators.

"Band plans are voluntary in nature," Hollingsworth acknowledged in each of the similarly worded letters. He said the FCC depends upon voluntary compliance because it minimizes the necessity for the Commission to be called in to resolve amateur problems. "Where interference results from band plans not being followed," Hollingsworth continued, "the Commission expects substantial justification to be shown by the operators ignoring the band plans."

Hollingsworth requested that Wehrung, Clauder and Vogt each reply to the complaints within 20 days.

==>IARU REGION 2 CONFERENCE CONCLUDES

The International Amateur Radio Union, Region 2, held its 14th General Assembly in Guatemala City, October 1-5. Twenty-one IARU member-societies from throughout the Americas were represented.

Heading the ARRL delegation was President Jim Haynie, W5JBP. He was assisted by First Vice President Joel Harrison, W5ZN, and staff members David Sumner, K1ZZ, Paul Rinaldo, W4RI, and Jon Siverling, WB3ERA.

Among other actions, the conference:

* Endorsed the objective of a worldwide allocation of at least 300 kHz for the amateur service at 7 MHz, while maintaining a 300-kHz allocation for Region 2 amateurs as "an essential and non-negotiable requirement." The conference emphasized that other objectives being sought by international broadcasters "should not be permitted to detract from reaching" these goals.

* Asked the IARU Administrative Council to study other ways to reduce interference from the users of CB radio equipment, particularly in the 10 and 12 meter bands.

* Urged Region 2 member-societies to support a coordinated approach to secondary allocations to the amateur service in the low-frequency bands 135.7-137.8 kHz and 160-190 kHz.

* Requested the Region 2 Executive Committee to study the possibility of an amateur allocation near 5 MHz, similar to the domestic allocation recently requested by the ARRL in the United States.

* Expressed appreciation for actions by the administration of Guatemala to preserve and improve the amateur allocation at 430-440 MHz.

* Expressed concern about unauthorized operation in the amateur VHF and UHF bands and encouraged member-societies to take appropriate action, particularly against continuing commercial interference to amateur satellite uplinks in the 2-meter band.

* Supported the revision of Article S25 of the international Radio Regulations, as proposed by the IARU Administrative Council, including the incorporation by reference of Recommendation ITU-R M.1544. This would permit the Recommendation concerning operator qualifications in the Amateur Service to be updated in the appropriate ITU-R Study Group rather than being drafted in a World Radiocommunication Conference.

Elected as president of Region 2 for a three-year term was past president Pedro Seidemann, YV5BPG. Outgoing president Tom Atkins, VE3CDM, declined to seek re-election after two terms. Elected as vice president was Dario Jurado, HP1DJ. He replaces Reinaldo Leandro, YV5AMH, who declined to seek re-election. ARRL International Affairs Vice President Rod Stafford, W6ROD, was elected secretary. Noel Donawa, 9Y4NED, was re-elected treasurer and Ron Szama, LU2AH, was re-elected to the Executive Committee. Newly elected to the Executive Committee were Tim Ellam, VE6SH, Pedro Rodriguez, CO2RP, Marco Tulio Gudiel, TG9AGD, and Gustavo de Faria Franco, PT2ADM.

==>IARU ADMINISTRATIVE COUNCIL CALLS FOR END TO MORSE REQUIREMENT

Saying that it was "setting aside any previous relevant decisions," the International Amateur Radio Union Administrative Council this week resolved that IARU policy supports "the removal of Morse code testing as an ITU requirement for an amateur license to operate on frequencies below 30 MHz." The Council further resolved to urge member societies--as an interim measure--to seek Morse code testing speeds "not exceeding five words per minute."

The resolution was adopted during the IARU Administrative Council meeting October 6-8 in Guatemala City, Guatemala, which followed the 14th General Assembly of IARU Region 2.

The Council's Morse resolution took into consideration the approval--without opposition--of ITU-R Recommendation M.1544. That document sets out the minimum qualifications of radio amateurs. The Council also said it recognizes that Morse code "continues to be an effective and efficient mode of communication used by many thousands of radio amateurs" but that Morse code proficiency as requirement for an HF amateur license "is no longer relevant to the healthy future of Amateur Radio."

The principal business at the Administrative Council session was to review the status of IARU preparations for WRC-2003. Agenda items of concern to amateurs include, among others, the harmonization of amateur and broadcasting allocations near 7 MHz, the adequacy of HF broadcasting allocations below 10 MHz, and possible revisions to Article S25 of the international Radio Regulations.

Among other things, Article S25 spells out Amateur Radio operator qualifications. It now provides that Amateur Radio license applicants demonstrate the ability "to send correctly by hand and to receive correctly by ear, texts in Morse code signals" for operation below 30 MHz. The IARU Administrative Council supports the revision of Article S25 and the incorporation by reference of Recommendation M.1544.

The IARU Council selected the theme of the next World Amateur Radio Day, April 18, 2002, as "Amateur Radio: Continuing Innovation in Communication Technology."

==>AMSAT-NA SYMPOSIUM DRAWS A CROWD IN ATLANTA

Amateur Radio satellite enthusiasts from around the US--and a few from abroad--converged in Atlanta October 5-8 for the 19th AMSAT-NA Symposium and Annual Meeting. The event attracted approximately 150 amateurs, who heard presentations on a wide range of amateur satellite-related topics.

The problem of interference from non-amateur intruders on VHF and UHF satellite bands was a topic raised in more than one forum during the weekend. The majority of the interference--particularly on 2 meters--has been blamed on taxicab operations in Mexico. "This particular source is Mexico," Soifer said. "It's been pretty well documented." Some conference participants said individuals using amateur gear as a personal communication service also are to blame.

Soifer, who chaired a VHF-UHF committee during the just-completed International Amateur Radio Union Region 2 Conference in Guatemala, said the issue got "quite a bit of attention" during conference. He advised a "use it or lose it" approach to combating interference. All agreed that reporting any intruders promptly to the IARU Monitoring System <bprice@...> would be beneficial.

During the Symposium's IARU forum, Soifer reported that Region 2 IARU member-societies were urged to report such interference to their national administrations. In Mexico, complaints already have been registered with COFETEL--the Mexican Federal Telecommunications Commission--and AMSAT has been prompting the amateur community to report such interference when they monitor it. "The idea is to keep the pressure up on Mexico," Soifer said.

AMSAT Treasurer Art Feller, W4ART, agreed. "The more noise that gets made . . . the more likely it is to get attention," he said. "So, report, report, report!"

IARU Satellite Adviser Hans van de Groenendaal, ZS6AKV, said keeping the bands active and reporting and documenting intruders help to keep interference away and lessen demands on amateur spectrum. "It adds to the ammunition that the IARU can use at the various conferences," he said.

Symposium attendees also packed presentations on the progress of the AO-40 satellite, the planned "Project JJ" satellite AMSAT-NA announced earlier this year, the Amateur Radio on the International Space Station effort, and various technical topics relating to amateur satellite work. Steve Diggs, W4EPI, chaired the conference.

At the AMSAT-NA Board meeting, AMSAT-NA President Robin Haighton, VE3FRH, was re-elected without opposition to another term. Haighton told the annual business meeting that AMSAT-NA now has more than 5000 members "and continues to grow."

Proceedings of the AMSAT-NA 19th Space Symposium and AMSAT-NA Annual Meeting are available from ARRL for $20. Visit the ARRL Products Catalog, <http://www.arrl.org/catalog/?item=8535>. Audio of the 2001 AMSAT Symposium and Annual Meeting sessions will available in RealAudio format via the Houston AMSAT Net Web site operated by Bruce Paige, KK5DO <http://www.amsatnet.com/>.

The 2002 AMSAT Symposium and Annual Meeting will take place November 8-11 in Fort Worth, Texas.

==>ARRL WELCOMES CHIEF DEVELOPMENT OFFICER

The ARRL has a new chief development officer. Mary Hobart of Wethersfield, Connecticut, officially assumed her new duties at ARRL Headquarters on October 1.

"We are all deeply impressed by her depth and breadth of knowledge and particularly by her energy," said ARRL Executive Vice President David Sumner, K1ZZ.

Hobart's primary job will be to create fund-raising strategies, garner philanthropic support for ARRL programs and provide leadership in support of program development, advocacy and ongoing operations.

Prior to coming to the League, Hobart served as vice president for development at Connecticut Public Television and Radio in Hartford, where she managed a comprehensive $6.8 million development program. She has been a

development professional for 17 years with a career focus on public broadcasting membership organizations. A native of Washington, DC, Hobart holds a BA in history and has completed work toward an MBA.

Hobart's two main passions are gardening and international travel. Among other accomplishments, she has led several safaris in Kenya.

==>SOLAR UPDATE

Propagation prognosticator Tad Cook, K7VVV, Seattle, Washington, reports: All indices were down this week. Average daily sunspot numbers were off 87 points from last week and nearly 133 points below the week before. Average daily solar flux has dropped nearly 57 points from last week and 82 points from the week before.

Geomagnetic conditions were relatively stable this week, with the average daily planetary A index down 18.8 points. October 4 was fairly active, with a planetary A index of 19 and K indices as high as five. October 8 and 9 were unsettled with planetary A indices of 15 on both days, and planetary K index as high as four.

The latest forecast shows solar flux at 170 on Friday through Sunday, then rising to 185 by Wednesday. Holographic images of the far side of the sun show a large sunspot region that should appear around Monday or Tuesday. Look for a big jump in solar flux by next Friday, October 19, when the sunspot group moves toward optimal position for influencing Earth.

Sunspot numbers for October 4 through 10 were 231, 160, 181, 154, 130, 99 and 133, with a mean of 155.4. The 10.7-cm flux was 186.5, 176.9, 180.4, 172.7, 171.2, 176.4 and 178.7, with a mean of 177.5. Estimated planetary A indices were 19, 9, 8, 4, 15, 15 and 8 with a mean of 11.1.

==>IN BRIEF:

* This weekend on the radio: The ARRL International EME Competition, the 902 MHz and Above Fall Sprint, the Oceania DX Contest (CW), the EU Autumn Sprint (CW), the Pennsylvania QSO Party, the FISTS Fall Sprint, the Iberoamericano Contest, and the North American Sprint (RTTY) are the weekend of October 13-14. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Clarification: A report in The ARRL Letter, Vol 20, No 40, mentioned the SmartBeaconing feature in conjunction with the Tiny Trak II, a miniature TNC designed for portable applications. Steve Bragg, KA9MVA, points out that the SmartBeaconing algorithm comes from HamHUD, another APRS device he and Tony Arnerich, KD7TA, invented. For more information, see "How SmartBeaconing Works" on the HamHUD Web site, <http://hh2.hamhud.net/smartbeacon.html>.

* Sign up for Emergency Communications Level I on-line course! October registration for the Level I--Introduction to Amateur Radio Emergency Communications on-line course (EC-001) will open Monday, October 15, at 4 PM

Eastern Time. Two classes of 50 students will be processed during the week, and on-line classes will begin the week of October 22. After 4 PM Monday--and until all seats are filled--the registration form can be found on the ARRL Course Registration page <https://www.arrl.org/forms/cce/>. Answers to most questions are on the ARRL Certification and Continuing Education Home page <http://www.arrl.org/cce> and via the links found in the small box on the right-hand side of that screen. To learn more, contact ARRL Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@...g. Registration for Level II--Intermediate Amateur Radio Emergency Communications (EC-002) will re-open Monday, October 29.

* Novice Spectrum Survey deadline is October 15: The deadline is Monday, October 15, to express your opinion on possible ways to optimize use of the present Novice and Technician Plus allocations on 80, 40, 15 and 10 meters. Survey results ultimately might form the basis of an ARRL petition for rule making before the FCC. The Novice Spectrum Study Committee--chaired by ARRL International Affairs Vice President Rod Stafford, W6ROD--has been examining the status and usage of the present Novice HF bands with an eye toward determining what changes might be needed now that the FCC no longer issues new Novice licenses. More than 4000 responses have been filed to date. The Novice Spectrum Study survey is available to ARRL members on the Web <http://www.arrl.org/members-only/NoviceSurvey.html>. Members may complete and submit the survey only once. Comments from members and non-members alike also are invited via e-mail to novicesurvey@.... Those completing the survey are asked to first read through the entire text of the survey to understand some of the committee's assumptions regarding what questions to ask and what band segments and modes to offer as predefined options.

* Wisconsin amateur antenna bill, AB-368, advances to Senate: Following passage on a voice vote earlier this month, the Wisconsin Amateur Radio antenna bill, Assembly Bill 368, is now in the Wisconsin Senate. AB-368 would codify the FCC's doctrine of limited pre-emption, PRB-1, into state law and require localities to "reasonably accommodate" Amateur Radio communication. Opposition to the measure has come from the League of Municipalities and the City of Milwaukee. The bill is now in the Senate Committee on Universities, Housing and Government Operations, chaired by Sen Mark Meyer. Meyer recently indicated in correspondence with a bill supporter that he understands the bill's importance to Amateur Radio operators. "In fact, I myself grew up with ham radio and fully support the bill," he said. Meyer said AB-368 would definitely be among the measures he plans to schedule for further committee action. Meyer could hold another public hearing before his committee votes on whether to send the measure before the full Wisconsin Senate. Information on how to contact Wisconsin lawmakers is available via the Badger State Smoke Signals Web site, <http://www.bsss.org.>. A copy of the pending legislation is on the Wisconsin Legislature Web site, <http://www.legis.state.wi.us/2001/data/AB-368.pdf>--Badger State Smoke Signals

*Elmer stories wanted: Attention, clubs! Is there someone in your club who is especially good at Elmering (mentoring) new hams? Write and tell us what

that person does that goes above and beyond the ordinary. A Web feature--"Elmers: A Guiding Ham" (similar to "Club Spotlight")--has debuted on ARRLWeb and awaits your story. Now's the chance to put your Elmer in the spotlight! Send your information to Margie Bourgoin, KB1DCO, ARRL Field and Educational Services, mbourgoin@... This is your time to publicly praise that special mentor!

* ARRL not soliciting for affinity credit cards: The ARRL is not telemarketing amateurs to sign up for an affinity credit card. Some ARRL members have reported being solicited for such products that were said to be offered in connection with an Amateur Radio organization. The ARRL is not sponsoring these solicitations and has no plans to do so in the future.

* DXCC credit now approved for TT8DX operation: Through the help of recent inquiries on the Internet, the ARRL DXCC Desk has received and accepted documentation for TT8DX (Chad). Those who submitted TT8DX previously and were denied credit may contact DXCC <dxcc@...> and have their records updated without having to resubmit cards.--DXCC Desk

* Noted DXer Pete Billon, K6JG, SK: John P. "Pete" Billon, K6JG, of Arroyo Grande, California, died October 7 following a long illness. He was 80. A member of ARRL a ham for more than 40 years, Billion was an A-1 Operator Club and DXCC Honor Roll member. He achieved #1 DXCC Honor Roll on Mixed (366) and Phone (363). He also was a charter member of the California Central Coast DX Club. A pilot during World War II, he later flew for United Air Lines. A memorial service was scheduled for Saturday, October 13, at the Lady Family Mortuary, 555 Fairoaks Ave, Arroyo Grande, California. Survivors include his wife, Jessie, K6GJ.--W6KFV via The Daily DX

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Hi

Mumbai Amateur Radio Society in association with Maharashtra State Scouts & Guides will participate in 43rd Jota in the coming weekend on 20th & 21st October 2001.we will be operative on International Jota frequencies and also the following frequencies
7.035 mhz,14.260 mhz, & 21.260 mhz.
There will be in all 5 stations operating from Mumbai & Thane
VU2NLF--- Shishu Vihar High School ,Dadar
VU2HIT---- Scouts Guide Pavilion, Shivaji Park
VU2SXF--- Shriram Welfare High School ,Andheri
VU2JPN--- Suman Nagar High School , Chembur
VU2UGO--- Shanti Nagar High School , Mira Road

De
Huzefa Merchant

============================================================

==>BATTLE LOOMS OVER PART 15 ACCESS TO 425-435 MHZ

The FCC has proposed changes to its Part 15 rules governing unlicensed
devices that would allow operation of advanced RF identification devices
between 425 and 435 MHz. By going along with a request made earlier this
year by SAVI Technology Inc and fiercely opposed by ARRL, the FCC has set
the stage for another battle between amateur and commercial interests.

"The FCC hasn't thought this through," said ARRL Executive Vice President
David Sumner, K1ZZ. He contends that the Part 15 RFID proposal--included
this week as part of a larger Notice of Proposed Rule Making and Order--is
"contrary to the whole philosophy of the Part 15 rules." Sumner said the
RFID devices SAVI proposes more properly belong on frequencies that are also
authorized for use by devices regulated by FCC's Part 18 Industrial,
Scientific and Medical (ISM) rules.
```

The FCC said this week's NPRM&O would modify the rules for RFID systems "to harmonize our rules with those in other parts of the world and to allow for improved operation." Sumner said that 433.9 MHz is allocated for ISM devices in 10 European countries but not in the rest of the world, including ITU Region 2 (North and South America).

Last March, the ARRL urged the FCC to deny or dismiss SAVI Technology's petition. The League argued that the field strengths and duty cycles SAVI proposed for its RFID tags were unreasonable "and would undoubtedly seriously disrupt amateur communications in one of the most popular of the Amateur Service allocations."

SAVI, which markets radiolocation and wireless inventory control products, told the FCC it needed the rules changes to satisfy customer demand for increased RFID system capabilities. The FCC this week said it agreed with SAVI that changes to its Part 15 rules to allow more advanced RFID systems in the 433 MHz band "would serve the public interest." It proposed to create a new section to Part 15 that would allow operation of RFIDs in the 425-435 MHz band and transmissions of up to two minutes at maximum field strengths now only permitted for extremely short-duration, intermittent control signals.

In an apparent about face, the FCC said it believes the proposed levels would offer only minimal interference potential for licensed users. The FCC in the past has acknowledged serious interference potential and has prohibited data transmission, among other things, at the proposed field strengths for that very reason.

As proposed, transmissions of 120 seconds would be permitted with just a 10-second silent period between transmissions. Under Section 15.231(e) periodic radiators are permitted field strengths of less than 5000 uV/m at 433 MHz measured at three meters, with duty cycles of less than one second and a silent period between transmissions that's at least 30 times the duration of the transmission.

The League pointed out in its earlier comments that the Communications Act of 1934 lacks authority to allow unlicensed devices with substantial interference potential. "Such devices must be licensed," the ARRL concluded. Unlicensed Part 15 devices must not interfere with licensed services and must tolerate interference received from licensed radio services in the same band.

Another portion of the proceeding involves the 13.56 MHz ISM frequency. Sumner said that proposal "at first glance" might permit increased emissions in the bottom 10 kHz of the 20-meter amateur band. Sumner said the ARRL would take a closer look at this section of the overall proposal before assessing its interference potential.

Sumner said the League plans to file a strong opposition to the FCC's NPRM&O. The entire Notice of Proposed Rule Making and Order in ET Docket 01-278 (which incorporates RM-9375 and RM-10051) is available on the ARRL Web site.

==>FCC STOPS ACCEPTING FILINGS ENCLOSED IN ENVELOPES

The FCC announced this week that, effective immediately, hand or messenger-delivered filings enclosed in envelopes will not be accepted at FCC Headquarters until further notice. The Commission is encouraging everyone to file electronically or via fax whenever possible.

Filings and other documents in envelopes or packages destined for the FCC should continue to be addressed to FCC Headquarters, 445 12th Street SW, Washington, DC 20554. At least for now, these deliveries will be diverted to the FCC's Capitol Heights facility--at 9300 East Hampton Drive, Capitol Heights, Maryland--for special handling. The FCC said it's looking for an alternative Washington, DC, site to accept delivery of filings on a more permanent basis.

A Public Notice said that starting Monday, October 22, the FCC will accept originals and copies of official filings addressed to the Commission's Secretary "held together with rubber bands or fasteners" only at its Capitol Heights facility . The FCC was accepting no hand-delivered or messenger-delivered filings--in envelopes or otherwise--before October 22. Filing deadlines for both paper and electronic filings were extended in light of the new procedures.

The changes were necessary "as a precautionary measure," the FCC said. "As the Commission continues to balance its efforts to be accessible to its customers with the need for heightened security measures, the Commission encourages its customers to make full use of the Commission's electronic filing systems to facilitate the filing of documents," an FCC announcement said.

The FCC Public Notice made no direct reference to the current anthrax scare. It also made no mention of any change in procedures regarding filings mailed in envelopes to its Gettysburg, Pennsylvania, office--where Amateur Service applications typically are sent.

The FCC said the Commission's Office of the Secretary will work with bureaus and offices, as appropriate, to handle bulk filings in accordance with the just-announced precautionary measures. The new no-envelopes procedures extend to filings requesting confidential treatment under the Commission's rules.

The FCC directed all questions about the new procedures to the Commission's Secretary, msalas@..., or 202-418-0300.

Visit the FCC Web Site for more information.

==>ISS CREW CHIEF MAY BE ON THE AIR FOR JOTA

International Space Station Expedition 3 Crew Commander Frank Culbertson, KD5OPQ, says he hopes to be on the air October 20-21 from NA1SS during Scouting's annual Jamboree On The Air. Stations not participating in JOTA are requested to give preference to Scouting/JOTA stations attempting to contact NA1SS.

"The ISS crew is very busy but excited about supporting JOTA QSOs," said Will Marchant, KC6ROL, of the Amateur Radio on the International Space Station program. "Frank had packed his Scouting T-shirt and will be wearing that during the QSOs."

Culbertson will use the general QSO voice frequencies: In Regions 2 and 3 (this includes the US), the frequencies are 144.490 MHz up and 145.800 MHz down; in Region 1 (Europe, Africa and the Middle East), the frequencies are 145.200 MHz up and 145.800 MHz down. See the ARRL Web site, <http://www.arrl.org/news/stories/2001/10/16/1/>, for approximate pass times.

Marchant advised stations to always listen before transmitting and to wait until NA1SS calls for the next station before transmitting. If NA1SS comes back to someone else, stop calling and wait until that contact is completed before trying again. He also says Culbertson hopes to be able to find more time for casual ham radio contacts in the days and weeks ahead.

During JOTA, Amateur Radio operators around the world invite Boy Scouts and Girl Scouts/Guides to their stations to chat with each other and to learn about Amateur Radio at the same time. Details are spelled out in the September 2001 issue of QST (see page 48) and on the ARRL Web JOTA page <http://www.arrl.org/FandES/ead/jota.html>.

==>EXECUTIVE COMMITTEE BRIEFED ON STATUS OF FCC, LEGAL ISSUES

The status of FCC and legal matters dominated the October 13 meeting of the ARRL Executive Committee. President Jim Haynie, W5JBP, chaired the gathering, which was held near Dallas, Texas.

ARRL General Counsel Chris Imlay, W3KD, reviewed the status of various FCC proceedings in which the League has an interest. The Committee was told that the FCC's Ultra Wideband (UWB) Transmission Systems proceeding, ET Docket 98-153, is expected to be resolved by year's end. The ARRL has continued to participate in a telecommunications industry coalition that is fighting to limit the interference potential of UWB devices.

Meanwhile, a resolution of the issue is not expected for several months in the ARRL's Petition for Rule Making requesting the FCC to elevate the Amateur Service to primary at 2300-2305 MHz. The FCC is under considerable pressure to increase the commercial use of spectrum in this general frequency range, Imlay told the panel. The League has been attempting to elevate Amateur Radio's status in the segment for five years, and renewed its request last May in a petition, RM-10165. A petition by AeroAstro, RM-10166, proposes a co-primary allocation but would place new restrictions on amateur operations in the 2300-2305 MHz band.

Imlay said the FCC is not likely to accommodate the Microtrax Petition for New Personal Location System at 2300-2305 MHz. Imlay also shared draft comments due for filing October 19 that address the inclusion of the 2390-2400 MHz amateur allocation among bands the FCC is considering for so-called next-generation wireless devices, ET Docket 00-258. The draft comments concluded that additional commercial use of 2390-2400 MHz is

incompatible with the amateur primary allocation, but it may be possible to accommodate some government sharing.

Imlay said it's anticipated that the FCC will combine three other ARRL petitions into a single proceeding early next year. RM-9949 calls for an Amateur Service primary allocation at 2400-2402 MHz; RM-9404 seeks new amateur allocations at 135.7-137.8 kHz and 160-190 kHz; and RM-10209 requests a new amateur allocation at 5.250-5.400 MHz.

Regarding ET Docket 99-231, Further Notice of Proposed Rule Making Regarding Part 15 Spread Spectrum Devices, Imlay noted that the ARRL has filed comments opposing the elimination of the processing gain requirement for direct sequence spread spectrum systems in the 2400-2483.5 MHz band because the requirement gives manufacturers an incentive to design spectrum-efficient systems.

Imlay noted that the FCC has requested parties to "refresh the record" in IB Docket 95-59 regarding reconsideration of rules adopted in 1996 on preemption of local zoning regulation of satellite earth stations. He observed that this may provide an opportunity to argue against inconsistent interpretation of the FCC's authority to preempt private land-use restrictions. The committee instructed Imlay to prepare and file appropriate comments in this proceeding.

Imlay reported that Barry Gorodetzer, N4IFE, was awarded his attorney's fees by a Florida trial court in his successful amateur antenna-related suit against the Emerald Estates Community Association. The Association has appealed. The ARRL Antenna Case Assistance Committee has provided funding to help cover the opposition to the appeal. The committee also reviewed the status of other cases involving amateur antennas.

In addition to Haynie and Imlay, others attending included First Vice President Joel Harrison, W5ZN; Executive Vice President David Sumner, K1ZZ; and Directors Frank Butler, W4RH, Frank Fallon, N2FF, Tom Frenaye, K1KI, and Fried Heyn, WA6WZO, and International Affairs Vice President Rodney J. Stafford, W6ROD.

==>MICHIGAN SCHOOL YOUNGSTERS MAKE "GREAT CONNECTION" WITH ISS

Youngsters at The Holy Spirit School in Grand Rapids, Michigan, recently quizzed International Space Station crew chief Frank Culbertson, KD5OPQ, on a variety of topics. The ham radio contact October 5 was arranged through the Amateur Radio on the International Space Station program.

It took a couple of tries for a successful QSO. A direct contact with the ISS was not possible, so the Holy Spirit contact ultimately was handled via a WorldCom telephone linkup with Gerald Klatzko, ZS6BTD, in South Africa. An initial attempt a day earlier via Tony Hutchison, VK5ZAI, in Australia, came up dry. As it turned out, Culbertson was in the middle of a scheduled activity and could not break away.

Ten excited students ranging from third grade to eighth grade turned out at the school at around 6 AM to be on hand. Culbertson thanked them for showing up so early. When all was said and done, 18 questions were asked and answered before the ISS passed out of range.

In response to a third grader's question about what it feels like to take off into space, Culbertson described the experience as "this big kick in the butt" that accelerates the space shuttle off the pad. "It's quite a ride. I love it," Culbertson said.

In response to another question, he explained that investigating the long-term effects on the human body of living in space was a major focus of research aboard the ISS. "We want to learn how people can live more healthily in space for long periods of time," Culbertson said, "because if we're gonna ever go further than low-Earth orbit, like to Mars, we're going to have to be able to stay up there for a very long time."

Culbertson noted that humans have been living aboard the ISS for nearly a year now. The ISS consists of two air locks and five modules, including a lab and living quarters. "It's a pretty good-sized house now," he said.

Culbertson said that when he has a few extra minutes, he often enjoys just watching Earth go by. One student gave Culbertson an opportunity to wax philosophical by asking what it's like to look down at what appears to be a peaceful planet "when it can be filled with so much violence."

"What I see from here is no real boundaries--artificial boundaries--but I see a good solid Earth that we need to take care of, and we need to live together in peace on," Culbertson responded.

After the applause died down, Holy Spirit Principal Sharon Grant called the QSO "a great connection, a great contact." The school first applied for a contact with the shuttle astronauts more than four years ago.

ARRL member Jim Cordes, KI8JD, assisted the school to prepare for the contact, which was televised throughout the school.

==>CQ ASKS CONTESTERS TO E-MAIL ALL LOGS

CQ magazine is asking all participants in CQ-sponsored Amateur Radio contests to submit their logs electronically. "In light of recent events regarding hazardous items sent through the mail, logs received through the mail at the CQ offices will be held unopened until all potential health risks have been evaluated," a CQ Communications news release said. CQ said it cannot guarantee that logs submitted via the US Postal Service will be opened.

All logs for the CQ World Wide DX Contest, the CQ WPX Contest, the CQ World Wide 160-Meter Contest, the CQ World Wide VHF Contest and the CQ/RTTY Journal RTTY contests should be submitted via e-mail according to the instructions in the rules for each contest.

CQ Communications President Dick Ross, K2MGA, said CQ regrets the inconvenience to contesters lacking Internet or e-mail access or those who

log by hand, but he said CQ did not want to risk the chance that staff members or contest committee volunteers might be exposed to dangerous packages sent through the mail. CQ suggested that contesters not now using computer logging programs start doing so.

CQ also suggested that hand loggers transcribe their logs into an ASCII (.txt) file using a word processor, separating each contact element with a tab, separating each contact with a carriage return, and e-mailing the resulting file to the address listed in the contest rules. "Be sure to include the required information about your station in a covering e-mail message," the CQ notice advised.--CQ Communications news release

==>PROJECT STARSHINE ISSUES CALL FOR TELEMETRY REPORTS

Project Starshine is seeking volunteer Amateur Radio operators and students worldwide to monitor and report telemetry from the recently launch Starshine 3 satellite. Data supporting a solar cell experiment on the satellite is being downlinked so students and radio amateurs can participate in collecting the data.

The satellite transmits 9600 bps AX.25 packet telemetry at 145.825 MHz every two minutes. An attractive QSL card is available to all who forward telemetry reports to Project Starshine.

Launched September 30 as one of three ham radio payloads from Alaska' new Kodiak Launch Complex, Starshine 3 is in a 500-km, 67-degree circular orbit. Nearly one meter in diameter, Starshine 3 weighs some 200 pounds and carries 1500 aluminum mirrors polished by some 40,000 student volunteers in the US and 25 other countries.

Starshine 3's primary mission is to involve and educate students in space and radio sciences. The "mirror-ball" surface permits youngsters to visually track the satellite during morning and evening passes. Students record the mirror flashes and report their observations to Project Starshine, and visual data gathered will be used to determine the effects of the atmospheric drag on the spacecraft.

To report Starshine 3 telemetry, visit the Starshine 3 Telemetry Web site, <http://epulation.com/starshine/starshine3/>. For additional information about Project Starshine, visit the Project Starshine Web site, <http://www.azinet.com/starshine/>.

==>SOLAR UPDATE

Solar sage Tad Cook, K7VVV, Seattle, Washington, reports: Sunspot numbers and solar flux values rose this week. Average daily sunspots were up nearly 18 points, and average solar flux rose almost 40 points. Solar flux was mostly in the 170s for a couple of weeks until this week, when it went above 190 and then 200.

Solar flux for the next few days should continue this rise, with values of 235, 240, 245 and 250 predicted for Friday through Monday. Unless new sunspots emerge, the solar flux is expected to decline below 200 by the end

of this month. Thursday and Friday, October 11 and 12, had unsettled to active geomagnetic conditions, but geo-indices have been quiet since. This was expected to continue, with A indices below 10, until October 18 at 0105 UTC when a large solar flare erupted from sunspot region 9661. The energy from this flare caused a radio blackout across Asia and Australia, and is expected to fully affect Earth on October 21.

Sunspot numbers for October 11 through 17 were 174, 179, 166, 178, 176, 168 and 171, with a mean of 173.1. The 10.7-cm flux was 174.8, 179.2, 179.5, 191.9, 192.9, 207.2 and 217.4, with a mean of 191.8. Estimated planetary A indices were 17, 27, 10, 9, 11, 8 and 4 with a mean of 12.3.

==>IN BRIEF:

* This weekend on the radio: Jamboree on the Air (JOTA), the JARTS WW RTTY Contest, the 50 MHz Fall Sprint, the Worked All Germany Contest, the Asia-Pacific Sprint (CW), the RSGB 21/28 MHz Contest (CW), and the Illinois QSO Party are the weekend of October 20-21. The YLRL Anniversary Party (SSB) is October 24-26. JUST AHEAD: The CQ Worldwide DX Contest (SSB), the SLP Competition (SWL), and the 10-10 International Fall Contest (CW) are the weekend of October 27-28. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Special event station K7UGA on the air October 20-21: The famous K7UGA call sign, once held by former US and presidential candidate Sen Barry Goldwater of Arizona, will be on the air during the October 20-21 weekend. Goldwater was a Life Member of the Central Arizona DX Association, and K7UGA was re-issued to the CADXA last October. K7UGA will be on the air on CW (32 kHz up from the band edge) and SSB (5-10 kHz up from the General band edge). Also look for K7UGA on 10.110, 18.090, and 24.905 on CW and on 18.160 and 24.965 on SSB. For more information, visit the CADXA Web site, <http://www.cadxa.org>.--Dave Hollander, N7RK/CADXA

* Additional Emergency Communications Course on-line classes opened: Due to increased demand, additional sections have been opened for the October on-line Level I Emergency Communications Course (EC-001) class. Seats remain available. "In light of the atrocities of September 11, hams around the country are realizing the importance and need to be prepared for the unexpected," said ARRL Certification and Continuing Education Coordinator Dan Miller, K3UFG. Those who were unable to successfully register earlier this week are urged to try again. Visit the ARRL Certification and Continuing Education Registration Page <https://www.arrl.org/forms/cce> to take advantage of this expanded continuing education opportunity. Answers to most questions are on the ARRL Certification and Continuing Education home page <http://www.arrl.org/cce> and the C-CE links at the right, including the CCE Syllabus, FAQs, Classroom and Exam Info, and much more. For other concerns--or if you have problems registering--contact ARRL Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* Davenport hamfest to shift location: The Davenport (Iowa) Radio Amateur Club Hamfest/Computer Show, Sunday, November 4, 8 AM until 2 PM, has been forced at the last minute to shift to another location. Now in its 30th year, the event will take place at the former Walgreens store in Southpark Mall, Moline, Illinois. The show was scheduled to take place at the Iowa National Guard hangar, but that site was declared off-limits because of security concerns. Talk-in will be on the 146.88 repeater. More information is available on the Hamfest/Computer Show is on the DRAC Web site, <http://gwltd.com/hamfest/>.

* AMSAT-NA seeks name for new satellite project: AMSAT-NA is looking for a proper name for its new satellite project--now known simply as "Project JJ" after the two proponents of the technology AMSAT is developing--Lyle Johnson, KK7P, and Dick Jansson, WD4FAB. In his President's Letter this week, AMSAT-NA President Robin Haighton, VE3FRH, said Johnson and Jansson have asked for a name change. Haighton requests suggestions for a new name via e-mail <ve3frh@...> by November 30. A committee will review the suggestions and announce a decision. "The person who proposes the chosen name will receive free admission to the Dayton AMSAT 2002 dinner," Haighton said. If there's a tie, the earliest entry will be declared the winner.

* PCsat commissioned and operational: PCsat, the recently launched Naval Academy Amateur Radio Satellite, was activated for users on October 3. Bob Bruninga, WB4APR, requests that users first read and agree to the PCsat User Service Agreement, posted on the US Naval Academy Web site <http://www.ew.usna.edu/~bruninga/pcsat/contract.txt>. Bruninga said that, due to frequent resets on orbit a temporary change to normal operating procedures was made as of October 12 to permit users to digipeat via the call signs of W3ADO-1 and W3ADO-2. "Thus, whether it is in safe mode or not, the settings will not change for users," Bruninga said. PCsat provides a worldwide position, status and messaging service for mobile and hand-held Amateur Radio satellite users. Bruninga said he hopes users will, for now, adhere to the maximum one-packet-per-two-minutes protocol. Base-station transmissions through PCsat "are not encouraged except for special tests, demos or other circumstances." PCsat is designed with no CPU other than two TNCs.

* SATERN seeks team to staff LA Territorial Headquarters station: Salvation Army Team Emergency Response Network National Coordinator Pat McPherson, WW9E, says SATERN is seeking a team or club to staff the Amateur Radio station at its Territorial Headquarters in Los Angeles. "This is the Salvation Army's headquarters for the Western States, and our people there are eager to develop the SATERN program," McPherson said. "We especially need personnel at the Territorial Headquarters to connect up with the rest of the amateur arena and our SATERN network during disasters, events and exercises." McPherson suggested that a club might want to adopt this duty as an ongoing activity. Interested parties may contact McPherson for additional details at ww9e@....

* WRTC 2002 announces additional national teams: These experienced contesters have been nominated to represent their countries in WRTC 2002. Asiatic Russia: Vadim Travin, RA9JX, and Oleg Usov, UA9CDV; European Russia:

Team 1, Vlad Aksenov, RW1AC, and Jack Danielyan, RW3QC; European Russia: Team 2, Igor Avdeev, UA2FZ, and Alex Orlov, RW4WR; Hungary: Zoli Pitman, HA1AG, and Antal "Anti" Hudanik, HA3OV; Lithuania: Dainius Savicius, LY1DS, and Andrius Ignotas, LY2TA; Slovenia: Robert Kasca, S53R, and Robert Bajuk, S57AW. Jointly organized by Contest Club Finland <http://www.qsl.net/ccf/> and the Finnish Amateur Radio League--SRAL <http://www.sral.fi>, WRTC 2002 will take place in Finland from July 9-16, 2002. The on-air competition will be held in conjunction with the International Amateur Radio Union (IARU) HF World Championship. During WRTC 2002, 50 two-person teams representing top operators from more than 30 countries will vie for gold, silver and bronze medals in both on and off-the-air events. For more information, visit the WRTC 2002 Web site, <http://www.wrtc2002.org/>.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Sir

Mumbai Amateur Radio Society in association with Maharashtra State Scouts & Guides will participate in 43rd Jota in the coming weekend on 20th & 21st October 2001.we will be operative on International Jota frequencies and also the following frequencies
7.035 mhz,14.260 mhz, & 21.260 mhz.
There will be in all 5 stations operating from Mumbai & Thane
VU2NLF--- Shishu Vihar High School ,Dadar
VU2HIT---- Scouts Guide Pavilion, Shivaji Park
VU2SXF--- Shriram Welfare High School ,Andheri
VU2JPN--- Suman Nagar High School , Chembur
VU2UGO--- Shanti Nagar High School , Mira Road

You are therefore requested to Kindly Register us in your records.

Subject: HAM Workshop at IIT Bombay.
Date: Fri, 26 Oct 2001 05:56:32 +0530 (IST)

Dear Mr Motwane,

I am a student of the Indian Institute of Technology, Bombay. We the students here at IITB wanted to organise a workshop on HAM radio in our institute on 3rd and 4th of November' 2001. This will be held under the banner of Techfest - the annual technological festival of IITB, the biggest of its kind in Asia.

Basically we have a HAM club in our institute but due to people gradually losing interest it has almost become dormant. We are trying to hold this workshop on HAM to revive the HAM club here and also generate more enthusiasm in this field.

I came to know about you and your contact while searching for HAMs in Bombay on the internet. I am approaching you to seek your help in organizing this workshop as being a HAM yourself you would be interested in spreading this amazing hobby to the younger generation also.

Please do reply to this mail as soon as possible as we greatly rely on you and some other very few people to make our workshop a success in arousing interest of the students here in the exciting field of HAM radio.

Could you also give us your contact phone no. and address so that we can get in touch with you without any further delay as very few days are left for the workshop ? Please help us in this regard.

I would be very grateful.

Yours sincerely,

Ankur Shrivastava
3rd Year Dual Degree
Mechanical Engg. Dept.
IIT Bombay.

Bulletin to Letter subscribers. The ARRL Letter and ARRL Audio News will
return Friday, November 19.--Rick Lindquist, N1RL

============================================================

==>ARRL TO FCC: NO COMMERCIAL USERS AT 2390-2400 MHz!

The ARRL this week urged the FCC "in the strongest possible terms" to make
no commercial allocations in the Amateur Service 2390 to 2400 MHz primary
allocation. The League tentatively suggested, however, that hams might be
willing to share the band with compatible government services that are
displaced to make room for advanced wireless systems.
```

The ARRL told the FCC that advanced wireless services "are fundamentally incompatible with continued amateur access to the band."

The federal government, on the other hand, "has historically been a compatible sharing partner," the League said, adding that government uses would offer "the least disruptive opportunities for sharing" in the band. The ARRL made clear that such sharing should happen only "if it is absolutely necessary to re-accommodate some displaced users" and would be "subject to compatibility studies."

The ARRL commented this week in four separate proceedings dealing with allocations for advanced and third-generation wireless systems, the mobile satellite service and the Unlicensed Personal Communications Service (U-PCS). The ARRL focused its remarks on ET Docket 00-258, which included 2390-2400 MHz as a candidate band for advanced wireless services.

Commenting on the WINForum Petition for Rule Making (RM-9498) that seeks to modify technical rules for Part 15 U-PCS operation at 2390 to 2400 MHz, the ARRL reiterated its position of two years ago. The ARRL said it still opposed a power increase for asynchronous U-PCS devices in the band and said there can be no change in maximum power spectral density. The ARRL called those two provisions "critical to the compatible sharing plan that resulted in ARRL support of the U-PCS authorization" in the band.

The ARRL also asked the FCC to retain the non-government primary Amateur Service allocation at 2390-2400 MHz. The ARRL also noted that amateur allocations in the vicinity of 2 GHz "have been steadily eroded" through encroachment by other services.

==>FCC CLARIFIES DETAILS OF CORES AMATEUR IMPLEMENTATION

The FCC's Wireless Telecommunications Bureau has clarified several issues regarding Amateur Service implementation of the Commission Registration System--or CORES. Starting December 3, everyone doing business with the FCC--including amateur licensees--must obtain and use a 10-digit FCC Registration Number (FRN) when filing. Many amateurs will not need to take any action to comply with the new requirement, which further expands the number of FCC abbreviations, numbers and systems hams need to be aware of.

Amateur licensees now registered in the Universal Licensing System (ULS) already have been cross-registered in CORES and issued an FRN by mail. The FCC said it planned another cross-registration by November 28. Amateurs can check to see if they have an FRN via a ULS license search. Many Internet call sign servers, including ARRL's, also provide this information.

Once CORES becomes mandatory, the FCC will "auto-register" all amateurs who seek to register in ULS and will issue them an FRN. Amateurs then should use the FRN in place of a Taxpayer Identification Number (TIN--typically an individual's Social Security Number) when filing applications with the FCC. New or upgrade license applicants not previously registered in ULS will be registered automatically in both CORES and ULS when they provide a TIN on a license application filed through a Volunteer Examiner Coordinator.

Both ULS and CORES will contain a licensee's FRN, but updating information in one system will not update the other. For amateurs, CORES registration will replace ULS "TIN/Call Sign" registration. Once CORES becomes mandatory, those registering in ULS will be redirected to CORES registration. The ULS will remain the Amateur Service licensing database within WTB, however, and only ULS will associate an individual with a particular call sign and FRN.

Going away December 3 will be the so-called Assigned Taxpayer Identification Number, or ATIN, which the FCC has been issuing to applicants ineligible to obtain a Social Security Number, such as foreign applicants and club station licensees. CORES will offer exemptions to amateur clubs and to foreign entities not holding a TIN/SSN. The FCC is encouraging club station applicants to first register in CORES and then use their FRN when filing via a Club Station Call Sign Administrator. Club station applicants also may use a trustee's TIN/SSN or a tax-exempt club's IRS-assigned EIN.

The WTB says that starting December 3, "all passwords will be maintained in the CORES database." Amateurs using paper FCC Form 160 to register in CORES will be mailed a CORES password for on-line access.

The FCC continues to work out the details of how amateurs, CORES and ULS will coexist. Amateur Service testing with CORES is planned for November. For more information about CORES, visit the FCC Web site <http://www.fcc.gov/> and click on the "Commission Registration System" link.

==>ISS CREW CHIEF ADDS SOME SPICE TO JOTA

Although he's been licensed a relatively short time, International Space Station crew commander Frank Culbertson, KD5OPQ, sounded like a contesting pro last weekend during Scouting's Jamboree On The Air. A former Boy Scout himself, Culbertson--operating NA1SS--worked a string of JOTA participants in the US and abroad October 20-21. Culbertson even brought along his Scout T-shirt.

Among the happy customers was Al Lark, KD4SFF ("Scouting for Fun"), who reports that at least three Scouts spoke with NA1SS over the weekend from Lark's N4ISS backyard JOTA setup in Greenville, South Carolina. "Frank was also excited to speak to a Scout from his home state of South Carolina." Lark said the Scouts now are very interested in obtaining their ham tickets.

On a Sunday pass over the US, Culbertson also logged contacts with K2BSA--the official Boy Scouts of America station near Dallas, as well as with other stations in the Southwest, Midwest and Northeast.

In Louisiana, Cedric Walker, K5CFW, said he had 16 boys from Troop 48 in New Orleans on hand to participate in JOTA. Walker said the QSO with Culbertson was crystal clear and was "an unforgettable thrill for every one of them."

In Oklahoma, Boy Scouts from Troop 850 in Guthrie and Troop 116 in Oklahoma City managed a quick contact with Culbertson on a Saturday pass. "At 17,000 miles per hour, he didn't have much time to chat," explained Assistant Scoutmaster John Dronberger, N5YZA.

>From Australia, Tony Hutchison, VK5ZAI, in Paringa said a young woman in his Scouting group of about 60 also snagged a contact with Culbertson. "Frank did a fine job over Australia on the scheduled pass," Hutchison said.

While over Europe, Culbertson whipped through a series of contacts--some with JOTA operations and others with non-participating stations. Recently, Culbertson has been more active in making casual FM voice contacts, and he's also been averaging two ARISS school contacts a week.

==>SATERN ENDS WORLD TRADE CENTER SUPPORT OPERATION

The Salvation Army Team Emergency Response Network (SATERN) Amateur Radio volunteer support effort in the wake of the World Trade Center attack in New York City has ended. SATERN Amateur Radio Liaison Officer Jeff Schneller, N2HPO, says the operation wrapped up October 18. The Salvation Army now is relying on Nextel and cellular telephone service.

During its five weeks of service, several dozen Amateur Radio operators from all over the US assisted the Salvation Army's relief efforts. REACT International provided volunteers in the early weeks of the activation. Ham radio primarily was used to provide logistical support for the organization's canteens and feeding centers.

Among the more recent volunteers were Steve and Kim Merrill, KB1DIG and KB1GTR, from New Hampshire. They did a tour of duty October 7-18. Working anywhere from 10 to 14 hours a day, the couple called their time in New York City "a very humbling experience."

"There was so much devastation," the Merrills recounted. "Nothing read in the newspapers or seen on TV could have prepared us for the actual sight of all of this."

The Merrills said they came away from their SATERN volunteer experience feeling as though they had "lived a lifetime in a few short days," but with "friendships that will last a lifetime" and "stories that have no end."

"Salvation Army SATERN is to be commended," they said. "They were more than nice to us. We felt like a part of a family!"

Schneller has urged all Amateur Radio operators to prepare for the future by first getting acquainted with and joining their local ARES or SATERN teams, then by taking the ARRL Amateur Radio Emergency Communications Course <http://www.arrl.org/cce>.

==>CULBERTSON ENJOYING ISS STAY, SCHOOL HAM CONTACTS

International Space Station crew chief Frank Culbertson, KD5OPQ, has been enjoying his stay in space and the opportunity to talk via ham radio with earthbound students. Culbertson recently chatted with youngsters--including two of his own--at schools in Indiana and Texas. The contacts were arranged by the Amateur Radio on the International Space Station (ARISS) program.

On October 16, Culbertson enjoyed a direct contact with sixth through twelfth-grade students who attend schools in Greenfield, Indiana. During the

10-minute contact, Culbertson covered topics that are, by now, familiar territory to him. A typical question involved the effects of zero gravity.

"Zero G affects almost everything we do up here," he explained. "If you put a tool down, it doesn't stay there unless it's got Velcro on it." He said the ISS residents must be careful to keep themselves anchored lest they become marooned in the middle of a module.

Culbertson related that he misses his family most of all, but ISS crew members no longer rely exclusively on Amateur Radio to contact with family and friends. A special Internet telephone permits both voice and e-mail communication, and the crew members have been making a lot of use of the new system.

He also told the youngsters that the number-one tool aboard the ISS is the laptop computer, which serves critical control, communication and planning functions. After that, Culbertson quipped, it's a tossup between a 7/16-inch wrench and a screwdriver. "We try to stay away from the hammers," he added. "The ground gets nervous when we drag them out."

Culbertson exhorted the youngsters to study hard. "Education will open the doors for everything you want to do in the future," He said. "Going to school is the most important thing you'll ever do in your life.

On October 18, Culbertson spoke with youngsters at Armand Bayou Elementary School in Houston, Texas, where his son and daughter attend. The Texas contact was successfully completed via Tony Hutchison, VK5ZAI, in Australia. A WorldCom teleconferencing linkup provided two-way audio between Texas and Australia.

Youngsters at the Texas school wanted to know how soon it would be until "regular people" and not just trained astronauts and cosmonauts could live aboard the ISS.

"I'll be a long time before 'regular people'--people who are not astronauts--can live on this space station," Culbertson replied, "but I think we'll have a station someday where people can live." He predicted that day could be two or three decades in the future, however.

In the course of answering another question, Culbertson also acknowledged his son, Frank, and his daughter, Annie, who were on hand at the school.

Culbertson said the ISS was "about the size of an average three-bedroom house" and that it took him about a half-minute to drift from one end to the other.

AMSAT News Service reports that European Space Agency French astronaut Claudie Haignere has become the first European woman to visit the International Space Station. She and two Russian cosmonauts arrived Sunday aboard the ISS from Baikonur aboard a Russian Soyuz vehicle. According to ANS, ESA has informed the ARISS team that Haignere may use Amateur Radio during her free time in orbit. The Soyuz crew departs for Earth October 30.

==>FCC PUTS KENWOOD "SKY COMMAND" PETITION ON PUBLIC NOTICE

The FCC has put on public notice a rulemaking petition from Kenwood Communications Corporation requesting that the FCC relax restrictions on Amateur Radio auxiliary station operation. The FCC assigned the rulemaking number RM-10313 to the petition and invited public comment. The petition marks Kenwood's latest attempt to legalize its "Sky Command" remote station control system.

Kenwood seeks a change in Part 97 rules that would expand permission to operate an auxiliary station on all 2-meter frequencies above 144.5 MHz, except on 145.8 to 146.0 MHz. While not mentioning Sky Command by name, Kenwood said the proposed rule change "would allow the development and use by amateurs of new technology devices and increase the utility of the limited amateur allocations." Current FCC rules limit auxiliary operation to certain frequencies above 222.15 MHz.

In July 2000, the FCC declared that use of the Sky Command did not comply with Amateur Service rules--specifically Section 97.201(b)--and declined to grant a waiver make it legal. The ARRL commented in opposition to Kenwood's earlier efforts to have the system declared to be in compliance, and it refused to permit Sky Command advertisements in QST <http://www.arrl.org/news/stories/2000/07/28/3/>.

Sky Command lets a user control a fixed HF station via a pair of dual-band transceivers. It operates in full duplex, using frequencies on 70-cm and 2 meters.

In its latest Petition for Rule Making filed May 1, Kenwood asserted that auxiliary operation is "poorly defined" in the FCC rules and "significantly overregulated." Kenwood argued that present limitations on auxiliary operation no longer are appropriate in today's amateur environment and should be withdrawn.

Amateurs may view and comment on the Kenwood proposal via the FCC's Electronic Comment Filing System (ECFS), <http://www.fcc.gov/e-file/ecfs.html>.

==>SENATE BILL'S PROVISION NOT VIEWED AS THREAT TO SURPLUS RADIO FANS

Amateurs who also collect military surplus radio "boat anchors" apparently have nothing to fear about a provision contained in the Senate version of the huge Department of Defense appropriations bill, S.1438. The provision, Sec 1062, would create governmental authority to "ensure demilitarization of significant military equipment."

That provision, now a topic for discussion on news groups and Web sites, would require anybody possessing "significant military equipment formerly owned by the Department of Defense" either to have it "demilitarized" or to return it to the government for demilitarization. The provision also has the National Rifle Association and a large number of firearms enthusiasts up in arms and wondering whether it would affect their hobby if it's included in the final legislation.

ARRL Legislative and Public Affairs Manager Steve Mansfield, N1MZA, looked into the issue and determined that those with surplus radio gear have nothing to worry about. "While we cannot speak reliably for the issue of firearms, we did contact one of the top lawyers for the Senate Committee on Armed Forces, where the provision was added to the bill," Mansfield said, "and he assured us that it would not be an issue unless a ham somehow had custody of some kind of top-secret and highly sophisticated military radio gear."

Mansfield said his Capitol Hill contact explained that the definition of "significant" derives specifically from the Arms Export Control Act (22 USC 2778), and that, in turn, was intended to provide "control of arms exports and imports" and not the typical ARC-5 transmitter or BC-348 receiver.

"In other words, it does not refer to radios, but rather to large shipments of large military ordinance like missile guidance systems and rocket launchers," Mansfield said.

The text of federal legislation may be found on the Thomas Legislative Information Web site, <http://thomas.loc.gov/home/thomas.html>. Mansfield said the ARRL will continue to monitor the issue.

==>SOLAR UPDATE

Heliophile Tad Cook, K7VVV, Seattle, Washington, reports: Solar flux and sunspot numbers rose this week. Unfortunately for HF operators, so did geomagnetic activity. Average sunspot numbers rose nearly 47 points, and average daily solar flux was up nearly 43 points.

Geomagnetic conditions were quite active on Sunday and Monday and reached a peak on Monday with a planetary A index of 66.The severe geomagnetic storm produced dramatic aurora displays. Conditions were worse toward the poles.

What is bad for HF can make VHF very interesting. JA7SSB reported that 6 meters was quite active in Japan, with SSB monitored from Italy, Norfolk Island, Australia, Hawaii, French Polynesia and elsewhere. All this excitement was from solar activity on Friday when flares erupted above sunspot 9661.

Even though conditions quieted down by Thursday, this does not look like a quiet weekend for the CQ World Wide DX SSB Contest. A flare around 1500 UTC on Thursday caused a strong radio blackout across the Americas and Europe. This expanding cloud of energy will probably strike Earth this weekend, ruining northern propagation paths. When this occurs, some operators notice an enhanced north-south propagation path, but what really happens is that the north-south path is often the only remaining path for HF propagation.

The latest projections late Thursday predict a declining solar flux of 230, 225, 220 and 215 for Friday through Monday, and an A index of 10, 20, 30 and 15 for those same days.

Sunspot numbers for October 18 through 24 were 182, 219, 230, 239, 207, 231 and 230, with a mean of 219.7. The 10.7-cm flux was 228.7, 247.6, 244.7, 224.1, 232.7, 226.4 and 238.7, with a mean of 234.7. Estimated planetary A

indices were 4, 8, 10, 40, 66, 15 and 3 with a mean of 20.9.

==>IN BRIEF:

* This weekend on the radio: The CQ Worldwide DX Contest (SSB), the SLP Competition (SWL), and the 10-10 International Fall Contest (CW) are the weekend of October 27-28. JUST AHEAD: The ARRL November Sweepstakes (CW), the ARCI Running of the QRP Bulls and the North American Collegiate ARC Championship (both in conjunction with SS), the IPA Contest (CW/SSB), the Ukrainian DX Contest, and the High-Speed Club CW Contest are the weekend of November 3-4. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Registration opens for Level II Emergency Communications on-line course: Registration for the ARRL Level II--Intermediate Amateur Radio Emergency Communications Course (EC-002) opens Monday, October 29, at 4 PM Eastern Time. On-line classes will begin the following week. For those with previous experience and for anyone who took the Level I course (EC-001), this course will enhance your skill and knowledge by providing a more in-depth look at emergency communications. To enroll, visit the ARRL Certification and Continuing Education Course Registration Page <https://www.arrl.org/forms/cce> after 4 PM Monday. Welcome letters go out later in the week after each student has been assigned a mentor. Access codes will be sent the following week. To learn more, visit the Certification and Continuing Education Program Home Page <http://www.arrl.org/cce> or contact Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* Dayton Hamvention picks emergency communications theme: The theme of the 2002 Dayton Hamvention will be emergency communications and preparedness, the Hamvention Committee announced this week in a letter to vendors and exhibitors. Hamvention said it's expecting "record attendance for 2002" at its 51st show, May 17-19, 2002. The annual event draws upwards of 30,000. "Hamvention expresses deep concern for the tragic events that occurred September 11, 2001, and the world events since," the letter said. "In order to show our support for Amateur Radio, we are going to emphasize emergency communications and preparedness as our theme for Hamvention 2002." The committee said it anticipates new Amateur Radio-related exhibitors as a result and would "limit the number of computer exhibitors at the show to only those who are related to Amateur Radio."

* Amateurs assist with American's United Flag Run: "American's United Flag Run"--a grass roots effort sponsored by American Airlines and United Air Lines employees--is seeking help from the Amateur Radio community to provide short-range communications as the run progresses across the US along a southerly route. "This event is to honor the crew and passengers killed on September 11, to show the American Spirit and to raise money for relief funds already established," said American Airlines Captain Bill Lokes. Runners started in Boston on October 11 and are scheduled to arrive in Los

Angeles November 11. Recently, hams in Georgia contributed their services to the cause as the flag run passed through that state. Georgia ARES--under the leadership of Section Emergency Coordinator Lowry Rouse, KM4Z--provided communications for the organizers from the South Carolina to the Alabama borders. The flag run Web site <http://www.flagrun.org> has a map, anticipated itinerary and more details about the event. Amateur Radio clubs or groups are invited to contact Bill Lokes, 610-767-9246; blokes@..., or Gene Atwell at 215-348-1594; atwell@....

* ARRL honors its own for long service: Each year, ARRL takes time to recognize employees who have attained at least 10 years' service as Headquarters staff members. Eight people were honored this year. Executive Vice President David Sumner, K1ZZ, took top honors, marking his 30th year of service to the League. Not far behind were three 25-year honorees: QST Managing Editor Joel Kleinman, N1BKE, ARRL Building Manager Greg Kwasowski, KB1GJF, and Assistant Mailroom Supervisor Berta Hould. Recognized for 10 years' service were QST Editor Steve Ford, WB8IMY, Legislative and Public Affairs Manager Steve Mansfield, N1MZA, Lab Test Engineer Mike Tracy, KC1SX, and Marketing Coordinator Bob Inderbitzen, NQ1R.

* Bicycle Mobile Hams of America founder Hartley Alley, NA0A, SK: ARRL recently learned that Bicycle Mobile Hams of America (BMHA) founder Hartley Alley, NA0A, of Boulder, Colorado, died on May 29, 2001. He was 82. An avid cyclist since 1965, Alley was introduced to ham radio in the early 1980s by a friend who enjoyed getting on the air while riding. BMHA got its start in 1989 after Alley placed a "Stray" in QST seeking other ham radio/bicycle enthusiasts. According to information on the group's Web site, <http://www.LaFetra.com/BMHA/>, BMHA now has more than 500 members in the US. One of Alley's most unique accomplishments was his 1987 cross-country bike ride to attend his 50th high school reunion in Massachusetts. Alley worked variously as a professional musician, magazine photographer, and university professor and also ran a mail-order business for cycling gear. He co-authored three travel picture books. Survivors include his wife Jean, N0EOX, and a son, Hartley D. Alley.

* James B. "Jim" Ricks, W9TO, SK: Jim Ricks, W9TO, of Lake Forest, Washington, died October 20. He was 86. Well-known in high-speed CW as well as in engineering circles, Ricks, designed the popular Morse electronic keyer that Hallicrafters marketed as the HA-1 T.O. Keyer. He was also founder of the high-speed CW group "CFO"--Chicken Fat Operators <http://home.aurora.edu/~bdillon/cfo/cfo.html>--(recognized on the air by the dit-dit-dit . . . di-dahhhhh signature, which is meant to sound like a chicken clucking). Ricks was considered CFO Number 1 and dubbed "Big Bird." He is survived by his daughter, Carter Ricks Hawley, and a son James Benjamin Ricks III.

* John Abbott, K6YB, SK: John Abbott, K6YB, of Newhall, California, died October 5. He was 68. An ARRL Charter Life Member, Abbott is perhaps best-known for his book Ride the Airwaves with ALFA and ZULU--a Technician license study guide aimed at youngsters. He also produced many Amateur Radio training aids that featured games and cartoons, written to simplify the

experience of studying for a license. Honoring her husband's wishes, Abbott's wife, Teri, has donated the remaining stock and manuscript of his book to ARRL.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe

letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

CONGRATS FOR WINNING THIS TRIP ..

Hi,

You have been selected for FREE 3 Days and 2 Nights stay at Hotel Camp Taliban, Kandahar ,Afganistan.
Free Lively Entertainment :-

1. Fire Works and Air Show by U.S. Air Force.

2. Get Physical - Exciting Games - Hide and Seek, Smoke me Out - hosted by Osama Bin Laden.
3. All lucky winners will be given a missile absolutely free(Spl offer for deepavali)
4. Free pilot training, spl preference for those who wish to land directly in their office.
Once in a Life Time opportunity - once you come here.. we guarantee you will never leave...DON'T MISS IT.....

For Confirmation and Reservation of front seats contact
Gen Pervez Musharaf,Pakistan...

Editor's note: Due to a scheduled vacation, the November 2 editions of The
ARRL Letter and ARRL Audio News are being distributed on October 31. There
will be no editions of The ARRL Letter and ARRL Audio News for Friday,
November 9. ARRL solar/propagation bulletins will be posted on the ARRL Web
site. Breaking news will be posted on the ARRL Web site
<http://www.arrl.org/>, as an ARRL Bulletin or as a Special Bulletin to
Letter subscribers. The ARRL Letter and ARRL Audio News will return Friday,
November 16.--Rick Lindquist, N1RL
==========================================================

==>SHARING SPECTRUM WITH OTHER SERVICES A HAM RADIO REALITY

Amateur Radio operators can get mighty territorial when they perceive that
some other radio service is intruding upon "their" turf. What many hams
often don't understand, however, is that Amateur Radio is a secondary
service in the US on several popular bands or subbands. As such, it's
subject to interference from primary radio service occupants and, by law,
must avoid interfering with them. And, of course, ham bands are not all the
same everywhere in the world.
```

Hams share most of their spectrum--especially the UHF and microwave allocations--with other users, typically the US Government and Fixed and Mobile services. The popular 70-cm band, 420-450 MHz, is a good case in point, says ARRL Field and Regulatory Correspondent Brennan Price, N4QX.

"Amateur use of the 70-cm band is secondary to government radiolocation services in the US, so hams must tolerate interference from the primary service and may not QRM it," Price explained. No operation in the 420-430 MHz band is permitted in some parts of the US (in the vicinity of the Great Lakes), while 50-W output power limits apply to operations centered near certain US military installations.

Price notes, however, that military use of the band is not confined to these areas, and the band is utilized aboard aircraft. "We occasionally receive inquiries from amateurs who complain of 70-cm disruptions when military planes fly overhead," said Price, who also serves as the ARRL Monitoring System coordinator. "We have every reason to believe that the current spate of widely heard disruptions is due to high-altitude airborne operations by the band's legal, primary occupant--the US Government." The 420-430 MHz segment is allocated on a primary basis worldwide to the Fixed and Mobile (except Aeronautical Mobile) services.

Two meters--144 to 148 MHz--is an exclusive allocation in ITU Region 2, which includes North and South America. US hams who have taken along an H-T while vacationing in Europe or elsewhere in Region 1, however, know that the 2-meter band in that part of the world is 144-146 MHz. In Region 3, hams have exclusive access to 144-146 MHz and share 146-148 MHz on a co-primary basis with Fixed and Mobile Service stations.

Six meters--50 to 54 MHz--is an exclusive ham allocation in Regions 2 and 3, but the band is allocated exclusively for broadcasting in Region 1--although certain countries do allow limited 6-meter operation.

The sharing news is much better on the higher HF bands. The 20, 17, 15, 12 and 10-meter bands are allocated to the Amateur Service on an exclusive basis worldwide--with a few minor exceptions for the high end of 20. On other HF bands, some sharing occurs.

On 30 meters--10.1 to 10.15 MHz--hams are secondary to non-US Fixed Service stations throughout. Amateurs must avoid harmful interference to these stations.

The 40-meter band is currently the focus of an effort supported by the International Amateur Radio Union and ARRL to obtain a 300-kHz worldwide exclusive allocation. Most of the world does not have access to the 300 kHz-wide swath from 7.0 to 7.3 MHz that US hams enjoy. In the rest of the world, the upper two-thirds of 40 is dominated by broadcasters. This issue is on the agenda for the 2003 World Radiocommunication Conference <http://www.arrl.org/announce/regulatory/WRC-03/>. One suggested remedy would shift the allocation downward to create a 300-kHz worldwide band at 6.9 to 7.2 MHz.

The 80/75-meter band--3.5 to 4.0 MHz--is exclusive to the Amateur Service in the US. Elsewhere in Region 2 hams have exclusive status from 3.500 to 3.750 MHz and share the rest of the band with foreign Fixed and Mobile services on a co-primary basis. Amateurs in Regions 1 and 3 share parts of the band with Fixed and Mobile. There is no amateur operation allowed above 3.8 MHz in Region 1, which includes Europe.

The 1.8 to 1.9 MHz segment of 160 meters is exclusive to US amateurs. Hams in the US are secondary on 1.9 to 2.0 MHz to the primary Radiolocation Service (government and non-government).

A table of US Amateur Radio allocations is available on the ARRL Web site <http://www.arrl.org/FandES/field/regulations/USbands.pdf>. The "Considerate Operator's Frequency Guide" details band plans for Amateur Radio <http://www.arrl.org/FandES/field/regulations/conop.html>.

==>"BAND THREAT" PROCEEDING NOW AVAILABLE FOR E-COMMENTS

The FCC conceded this week that it had failed to properly post the Notice of Proposed Rule Making and Order in ET Docket 01-278 on its Web site. As a result, those hoping to voice their opinions in the proceeding--which poses a potential threat to Amateur Radio--were unable to find the document to add their electronic comments. An FCC spokesperson blamed human error.

The ARRL contacted the FCC earlier this week in an effort to rectify the problem. The NPRM&O now is available on the FCC's Electronic Comment Filing System Web site <http://www.fcc.gov/e-file/ecfs.html>. When searching, enter "01-278" in the "Proceeding" box in the "Search for Filed Comments" window.

The ET 01-278 proceeding deals in part with a potential band threat to the popular 70-cm band from a Part 15 RF identification device proposed for deployment by SAVI Technology (see the Threats to our Amateur Bands page <http://www.arrl.org/news/bandthreat/> for details). The ARRL has argued that the FCC lacks authority under the Communications Act of 1934 to permit unlicensed devices with substantial interference potential and that such devices must be licensed.

The ARRL also is looking into the interference potential posed to 20 meters by a proposal to increase the maximum emission levels permitted in the 13.56 MHz Industrial, Scientific and Medical band as well as the maximum level of out-of-band emissions.

Commenters are advised to read paragraphs 20-27 of the NPRM&O (also available on the ARRL Web site <http://www.arrl.org/news/stories/2001/10/19/1/290a11.html> before commenting.

The proceeding incorporates two earlier rule making petitions, RM-9375, and RM-10051, which had existing document lists for the addition of comments. The FCC told ARRL that those wishing to file comments need only reference ET Docket 01-278, however. Comments need not be copied to the existing RM-9375 and RM-10051 lists.

Members of the Amateur Radio community may file comments using the ECFS <http://www.fcc.gov/e-file/ecfs.html>. Commenters should include their full name, US Postal Service mailing address, and the applicable docket or rule making number--in this case ET 01-278.

It's also possible to e-mail comments via the ECFS. To obtain e-mail filing instructions, commenters should send an e-mail to ecfs@... and include the words "get form <your e-mail address>" in the body of the message. A sample form and directions will be sent by reply e-mail.

==>TEXAS ELEMENTARY SCHOOLERS ENJOY ARISS ADVENTURE

Fifteen youngsters in grades three, four and five used ham radio to interview International Space Station Expedition 3 Crew Commander Frank Culbertson, KD5OPQ, from the McWhirter Elementary School in Webster, Texas--not far from Johnson Space Center. The Amateur Radio on the International Space Station, or ARISS, contact October 23 was handled via a teleconferencing linkup with ZS6BTD in South Africa.

Operating as NA1SS, Culbertson recognized some of the youngsters and asked them to convey his regards to their families. The contact occurred shortly after the Soyuz "taxi" crew had arrived at the ISS, bringing aboard three additional crew members.

In answering the dozen or so questions posed, Culbertson pointed out that the ISS includes protection to break up small meteors. The ISS can be maneuvered from the ground to avoid large objects spotted in advance by radar, he explained.

To a question about how his two dogs would fare aboard the ISS, Culbertson replied that he thought dogs would have a difficult time in space because they don't have hands to hold onto the handrails. "They'd have a hard time staying in one place and would probably get disoriented and would probably try to run in the middle of the module," he said. "So I don't think they would enjoy it very much unless they had some way of staying on the floor, like a lot of Velcro on their feet."

Another student asked about the September 11 attacks. Culbertson said he and his two Russian crewmates were able to see the result of the attacks from the ISS and were very troubled. "It seems strange to me that people would want to attack our country when we do so much good for the rest of the world," he said, "and we're trying to do good things with other countries up here and I hope that sets a good example for the future."

"I think all the kids had a great time. This was a great learning experience for each of us," said McWhirter Elementary Principal Cindy Stamps. Gene Chapline, K5YFL, was the ARISS mentor for the contact.

On Tuesday, October 30, Kolling Elementary in Schererville, Indiana, had a successful ARISS contact with Culbertson, operating NA1SS on the ISS. The control op was John Gianotti, W9WY. Seventeen students had their questions answered.

More information on the ARISS program is available on the ARISS Web site, <http://ariss.gsfc.nasa.gov>.

==>GEORGIA TO HOST 2002 USA ARDF/RADIO-ORIENTEERING CHAMPIONSHIPS

ARRL Amateur Radio Direction Finding (ARDF) Coordinator Joe Moell, K0OV, has announced that the Georgia Orienteering Club will host the second USA ARDF/Radio-Orienteering Championships. The event will take place April 19-21, 2002, at F. D. Roosevelt State Park near Pine Mountain.

The USA ARDF/Radio-Orienteering Championships are open to all, from beginners to experts from the US and elsewhere, and no Amateur Radio license is needed to compete. The 2002 competition will feature 2-meter and 80-meter ARDF events. Participants will compete in age/gender categories with awards given for first, second and third-place finishes in each. Awards will be presented in two divisions, Overall and USA-Only.

Details, including rules and registration forms, are on the Georgia Orienteering Web site, <http://www.mindspring.com/~sam.smith/gaoc>. Click on the "Radio-O Champs" link (under Special Events). The GAOC site includes information on lodging options.

The next ARDF World Championships in fall 2002 will be held in Slovakia, and positions on Team USA for that event will be determined by individual performances at Pine Mountain and at the USA Championships in Albuquerque that were held this past August (see "The 2001 USA ARDF Championships are a Winner!" <http://www.arrl.org/news/features/2001/08/24/1/?>).

For additional information on Amateur Radio direction finding, visit Joe Moell's Homing In Web site, <http://www.homingin.com/>.--Joe Moell, K0OV

==>HAM-SAILOR SETS SAIL FOR HOME

Ham radio's senior sailor David Clark, KB6TAM, set sail this week from Trinidad to complete the final leg of the adventure of his lifetime. Clark, who is 77, is attempting to become the oldest person to sail solo around the globe. He plans to arrive back in Ft Lauderdale, Florida, on December 7. Clark has been using Amateur Radio aboard his vessel to keep in touch with his family and friends.

His immediate goal is St Croix in the US Virgin Islands, said his wife, Lynda, but if the weather cooperates and everything goes well he may proceed directly to Great Inagua in the Bahamas. "This is technically the completion of the goal, since his outgoing and incoming paths will cross again--where he checked out and will check in again," Lynda Clark said. "However, we will feel he has finished the goal when he reaches Ft Lauderdale where we all said good-bye to him two years ago."

Accompanied by his dog, Mickey, Clark departed South Florida in December 1999 in the 44-foot steel-hulled sloop, the Mollie Milar--named for his mother. Mickey was lost and Clark himself nearly died after the vessel sank last February off the coast of South Africa. Not one to give up that easily, Clark was able to purchase another sailboat--a smaller one that he named Mickey--and resumed his quest in April. He's been sitting out the Atlantic

hurricane season in Trinidad, where he arrived in July.

Clark was expected to be checking in on the 20-meter Seafarer's Net on 14.313 MHz. The final leg from Trinidad to Fort Lauderdale is approximately 1500 miles.

For more information on Clark's journey, visit these Web sites <http://www.dclark.com> and <http://www.captainclark.com>.

==>HAMS UNDERTAKE A RANDOM ACT OF KINDNESS IN FLORIDA

It had very little if anything to do with ham radio Saturday, September 21, when the Dade County Amateur Radio Public Service Corps organized a group of active hams in Southern Florida to spruce up the Flight 592 Memorial. Many of the hams involved had helped provide communication in the aftermath of the 1996 ValuJet crash in the Everglades.

The amateur volunteers put in some 40 work hours pulling weeds and grubbing out their roots, killing ant colonies, applying herbicides, cutting grass, sweeping, refilling missing sand, re-leveling brick walkways and piling up the debris--mostly natural overgrowth. About a dozen hams participated in the effort.

"These folks do this kind of thing without request, but because there is a need to care," said ARRL Southeastern Division Vice Director Evelyn Gauzens, W4WYR. "This group of amateurs are very special people with hearts as big as the whole world."

Family members of Flight 592 victims also expressed their appreciation for the effort. This comment was typical of several posted on the Flight 592 Memorial Web site <http://www.flight592.com/>: "I want to thank you from the bottom of my heart for what you did. It was a wonderfully selfless act and greatly appreciated. Those of us who live too far away and are unable to see to the care of the memorial are greatly touched by the generosity of strangers. Thank you again and God bless you."

Additional information and photographs are available on the South Florida FM Association Web Page <http://sffma.net/cleanup.htm>. Said Ray Vaughan, KD4BBM "To everyone who helped, we did make a difference. Let's do it again."

==>IN BRIEF:

* This weekend on the radio: The ARRL November Sweepstakes (CW), the ARCI Running of the QRP Bulls and the North American Collegiate ARC Championship (both in conjunction with SS), the IPA Contest (CW/SSB), the Ukrainian DX Contest, and the High-Speed Club CW Contest are the weekend of November 3-4. JUST AHEAD: the Japan International DX Contest (SSB), the Anatolian ATA PSK31 Contest, the WAE DX Contest (RTTY), the ARRL International EME Competition, the OK/OM DX Contest (CW) and the CQ Western Electric Contest are the weekend of November 10-11. See the ARRL Contest Branch page,

http://www.arrl.org/contests/ and
http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* VY1JA to be QRV during November CW Sweepstakes: With thanks and appreciation to J Allen, VY1JA, Rick Lindquist, N1RL, will be at the helm of VY1JA, Yukon Territory, for the 2001 ARRL November CW Sweepstakes <http://www.arrl.org/contests/announcements/rules-novss.html>, November 3-4. J reports the antennas and the amplifier are working (the latter thanks to the prompt and courteous attention of Ameritron and Martin Jue, K5FLU), and--aurora permitting--VY1JA will be QRV to help complete those clean sweeps. Some post-contest operation as N1RL/VY1 also is possible and may include UO-14 and FO-27 activity from CP20. The five-day forecast for Whitehorse calls for snow and temperatures no warmer than freezing.

* ARISS establishes European QSL service: The ARISS Europe QSL service now is prepared to handle European requests for NA1SS QSL cards. Requests for ARISS QSL cards go to ARISS-Europe QSL Bureau, AMSAT-France, 16 rue de la Vallée, 91360 Epinay Sur Orge, FRANCE. Requestors should include a self-addressed envelope and two International Reply Coupons (IRCs) to cover the handling cost.

* Dayton Hamvention awards deadline looms: The Dayton Hamvention now is accepting nominations for its Amateur of the Year, Special Achievement, and Technical Excellence awards. The deadline for nominations is January 31, 2002. All amateurs are eligible. The Amateur of the Year Award goes to an individual who has made a long-term, outstanding commitment to the advancement of Amateur Radio. The Technical Excellence Award is for the person who has made an outstanding technical advancement in the field of Amateur Radio. The Special Achievement Award honors someone who has made an outstanding contribution to the advancement of Amateur Radio, usually someone who has spearheaded a significant project. The Hamvention Awards Committee makes the decision on all awards based in part upon the information it receives--and not on the number of nominations submitted. Documentation that informs the Awards Committee of a candidate's accomplishments may include magazine articles, newsletters, newspaper clippings, and even videos (these materials become the property of Hamvention and will not be returned). Nominations may be submitted by mail to Hamvention Awards, PO Box 964, Dayton, OH 45401-0964, or by completing the e-form on the Dayton Hamvention Web site <http://www.hamvention.org>. Click on the "Award Nominations" link.

* Les Belyea, N7AIK, SK: Former ARRL Montana Section Manager Leslie C. "Les" Belyea, N7AIK, of Belgrade, Montana, died October 22. He was 65. Belyea served as Montana's SM from 1981 until 1987. Montana Section Manager Darrell Thomas, N7KOR, said Belyea was active in emergency communications and as manager of the Montana Net. "He will be greatly missed," Thomas said. An ARRL member and an Extra class licensee, Belyea taught theory and Morse code classes for prospective hams. A native of Michigan, he had served in the US Marine Corps and later worked for Frontier and Continental Airlines and for Sunbird Aviation--never missing a day of work. Upon retiring, he restored vintage farm machinery and was an avid golfer. Survivors include a daughter,

a son and a brother. Many of Belyea's Amateur Radio friends attended a service held October 28. Memorial contributions in Belyea's memory are invited to ARRL, 225 Main St , Newington, CT 06111.--some information supplied by Bozeman Daily Chronicle

* Texas hams assist flag run: Members of the Irving (Texas) Amateur Radio Club supported the Americans United Flag Across America event October 27-28, as the US flag passed through their community on its way to the West Coast. The grass roots effort, sponsored by American Airlines and United Air Lines employees, is seeking help from the Amateur Radio community to provide short-range communications as the run progresses across the US along a southerly route. "The event is to honor the crew and passengers who died September 11, to show the American Spirit and to raise money for established relief funds, said American Airlines Captain Bill Lokes. Runners started in Boston on October 11 and are scheduled to arrive in Los Angeles November 11. IARC helped with communication and transportation during the Irving segment of the run. "Our help was really needed and was greatly appreciated by the local run organizers and participants," said IARC Secretary Bill Byrom, N5BB. Dave Finley, N1IRZ, reports that the National Radio Astronomy Observatory (NRAO) in Socorro, New Mexico, will host the runners and support personnel of the Americans United Flag Across America when it reaches New Mexico Novembe 4. More information is available on the Americans United Run Across America Web site. Amateur Radio clubs or groups interested in assisting are invited to contact Bill Lokes, 610-767-9246; blokes@..., or Gene Atwell at 215-348-1594; atwell@....

* Morse Code to be featured on upcoming X-Files episode: Rob Ginkowski, WA6CW, of Hollywood, California, served as a technical adviser to The X-Files star Robert Patrick for an upcoming episode. Patrick's character, John Doggett, was in a hospital bed, paralyzed, and was required to send a Morse code message by tapping his index finger. WA6CW (who also works as an actor) taught Patrick how to tap out the message at about 5 WPM. "He was a fast learner," Ginkowski commented. No word on what the message was, but it might be, "The truth is out there." The episode, entitled "4-D," is scheduled to air Sunday, December 9, on the Fox TV Network.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Subject: VU2UGO's JOTA Report - 20th-21st October, 2001

JOTA Station Callsign : VU2UGO

Team Members : Sandip (vu2ugo), Mukesh (vu2ugj) and Pankaj (vu2rio)

Station Location : Shanti Nagar High School, Mira-Road.

On the 20th October morning, the JOTA started with the inaugural speech of the Hon'ble principle Mr.Diego Tuscano.
There were around 250 students present for the event. The scout masters were Mr.Santosh Kambli & Mr.Subroto.

The station started making QSOs from 9am onwards. The first contact was with A47JOTA, the special event callsign station from OMAN. It was a short QSO. After that we worked longer and better QSOs with many stations from Bangalore, Mangalore, Chennai, Bhopal, Baroda etc. throughout a day till 7.30pm evening. Next morning on Sunday also the station was active from 8.30 am to 5.00pm in the evening.

Atleast 250 scounts and guides took part in this JOTA event. Basically they introduced themselves with their counterparts in different locations in India. They shared their hobbies, favourite colours and thier personal information etc. They also enjoyed singing songs.

Suggestions :-
1. The station location & their team leader should be announced at least 2/3 months before the event.
2. The team leader should be provided with the list of schools nearby to his station, their school masters, their contact nos. in advance so that the leader will follow up with them prior to event.
3. The event leader should provide questionnaire for scouts.
4. The team leader should be make aware of the things to be aired.
(according to one of the HAM who was also asst. director of chennai, the prayers should not be aired)

Congratulations to all the other stations for participating and successfully conducting the JOTA organised by MARS.
Special congrats to VU2HIT for leading the event successfully and Special thanks to Mukesh for his big help.

---

please forward this message after correction to vu2hit@...

Hi everybody,

Have a look at this link of Sandeep

http://www.qsl.net/vu2msy/

He also maintains a India Ham database on the page. If your listing is not there or wrong then one can update or add there itself.

Rest all fine keep Haming, (May be too much on my part to say that) But some things you love in life.

Email with NO telephone line?
james prentice (WA2MZF) (http://www.eham.net/user/profile/WA2MZF)on November 14, 2001
View comments about this article! (http://www.eham.net/articles/2518#comments)
Short note to advise some of you that may have the interest in having email with no telephone. This is not new but it is not known to a lot of hams. We are full time rvers which means no telephone much of the time. Also some campgrounds do not have modem hookups. When boats are at sea they also do not have telephones !
Probably 75 percent of the users are boaters.
I take no credit for any of this except to say that we have been using it for over three years now and it is the greatest thing out there "for some of us".
Oh I should point out also this is to send email to anyone ! non hams as well as hams. It is not and cannot be used to "surf" the web, email only!

The mode is hf pactor and is available worldwide, on most all ham bands. The software "airmail" is free, actually everything about this is free after you have the equipment needed.
Many links at the top of our home page will guide those that are interested in this mode: http://www.qsl.net/wa2mzf/
current phone connection here is to be disconnected tuesday sept 18th and will hit the road. I hope the links help those that may have a need for this.
Many "NEW" improvements are coming shortly also.
Check the links often as they will be updated.
This note only to whet your appetite

Pactor (in my opinion) is one of the best kept secrets of ham radio. I used to be a dedicated RTTY op, but now I spend about all my time roaming around 14.075 working Pactor. Yes, it does require a TNC, and has a little learning curve, but it's totally error-free! Average traffic speeds (using my equipment) run about 4 to 5 cps, with bursts under ideal

condx (steady signal and quiet band) upwards of 15 cps--much faster than I can type!

Steve, KE4MOB

Mail this to a friend! (http://www.eham.net/forums/mailto/1?id=10443)

Winlink 2000 at http://winlink.org/k4cjx/ is one of these networks of unattended Mailbox (MBX) "radio to internet" systems. I have never used the system but do understand that it provides a great service to hams in the field, particularly to maritime hams far from a phone line. These systems use Pactor (1 and 2) which provides the baud rate and error corection needed for proper effeciancy.
THERE IS A DOWN SIDE...!
As a 100% HF digital operator, these unattended stations, and the folks that use them, are the single greatest "pain in the neck" outside of lousy band conditions! I am sure that many users of this system do listen for a clear frequency first, but the way it appears to work is, you go to a known MBX frequency and you call and call and call... If you do not connect, you increase power and call some more. If no luck, you start slowly moving the VFO up and down a few hz while continuing to call. If you still can not connect, that means the propagation is not good or the QRM from the station that was trying to carry on a "real" QSO near that frequency is too great for you to get connected to the system. In that case you wait until they have finished using the frequency or you call some more until the other stations give up. If you connect to the system station (the unattended station) that means propropagation is working and the frequency is clear, or the frequency was in use but you were lucky enough to get a few connect packets sent back and forth successfully to the system station. In which case, the extremely robust nature of the Pactor ARQ will allow you to send/receive your email traffic regardless of who might have been nearby the frequency trying to carry on a QSO.
This is no exaggeration! A MBX station on 7.071 and another on 7.072 have just about eliminated the PSK31 activity on 40 meters! There are entire networks of these stations on all HF bands now. These stations go off like "land mines" when you least expect it. My message to hams that are thinking about trying one of these networks because they think it is "cool", please think twice!

The ARRL Letter and ARRL Audio News will be distributed as usual that day.
============================================================

==>"THE BIG PROJECT" SEEKS ADDITIONAL PILOT SCHOOLS

The ARRL Amateur Radio Education Project--"The Big Project"--is seeking
additional pilot schools. The Project, the educational initiative of ARRL
President Jim Haynie, W5JBP, is aimed at providing a turnkey Amateur Radio
curriculum, equipment and resources to schools. It already has pilot schools
in Texas and Georgia.

Big Project Coordinator Jerry Hill, KH6HU, says additional pilot schools are
needed to help in developing the curriculum and setting up the program on a
national scale. "These can be schools that already are using Amateur Radio
in their curricula," said Hill, who came aboard as Project Coordinator in
September.
```

Schools selected to participate will help to shape the project's ultimate design, which will include classroom materials and resources as well as Amateur Radio equipment to establish a school station. In addition, teachers currently using Amateur Radio in their classrooms are eligible to apply for progress grants to help them continue their efforts.

Hill said he's hoping to recruit several schools that offer a good demographical and geographical representation of US schools. DeGolyer Elementary School <http://www.degolyer.com/> in Dallas, Texas, and Richards Middle School <http://www.mindspring.com/~jerichms/> in Lawrenceville, Georgia, already have been designated as pilot schools. The ARRL Education Project already has supplied DeGolyer with a HF/VHF/UHF transceiver plus antennas and accessories for its K5DES club station. Richards Middle School is working closely with the Gwinnett Amateur Radio Society.

Hill concedes the program's success depends both on funding and the participation of sufficient schools. But the primary focus right now is on the educational aspects.

"The goal of the Amateur Radio Education Project is to improve the quality of education by providing an educationally sound curriculum focused on wireless communications," Hill said. "The project emphasizes integration of technology, math, science, geography, writing, speaking and social responsibility within a global society." Hill said the program will be as much hands-on as possible. Teachers will be able to use the ARRL Amateur Radio Education Project as a complete classroom curriculum, an enrichment program or as a before or after-school activity.

In addition to gleaning practical knowledge from the pilot schools, Hill's own "big project" in the months ahead will be to develop the actual curriculum. He'll be working with a core of at least six teachers--all of whom have been using Amateur Radio in their classrooms for a long time--to develop the materials students will use. He's also invited the assistance of educational professionals on the college and university level.

Schools interested in applying to become a pilot school should visit the ARRL Amateur Radio Education Project Pilot School Application page, <http://www.arrl.org/FandES/tbp/pilot-school-ap.html>. Teachers now using Amateur Radio in the classroom are invited to apply for progress grants to assist them in maintaining their stations or enhancing their programs. See the ARRL Amateur Radio Education Project Progress Grant Application page, <http://www.arrl.org/FandES/tbp/progress-grant.html>

Donations large or small from individuals and organizations targeted for The ARRL Amateur Radio Education Project are encouraged. Donations in the form of cash or securities may be sent to the ARRL Amateur Radio Education Project, c/o ARRL Development Officer Mary Hobart, 225 Main St, Newington, CT 06111. For more information, contact Hobart, mhobart@...g; 860-594-0397, to discuss details.

==>WINNERS ANNOUNCED IN VICE DIRECTOR BALLOTING IN THREE DIVISIONS

Ballots were counted November 16 at ARRL Headquarters in contested races for vice director in three ARRL divisions for the 2002-2005 term. The Committee of Tellers has certified the results of these contested elections.

In the Pacific Division incumbent Vice Director Bob Vallio, W6RGG, of Castro Valley, California--a retiree--garnered 1924 votes to beat back a challenge from physician Gerald D. Griffin, K6MD, of Pacific Grove, California. Griffin polled 1225 votes.

A ham since 1952, Vallio, 65, was SM and, previously Section Communications Manager of the East Bay Section and is completing his second year as Pacific Division Vice Director.

In the Southeastern Division, Georgia SM and retired TV traffic coordinator Nelson E. "Sandy" Donahue, W4RU, of Atlanta, Georgia, outpolled West Central Florida Assistant Section Manager and computer programmer-analyst Paul J. Toth, NA4AR, of Seminole, Florida, 2783 to 2305. They were contending for the seat being vacated by Vice Director Evelyn Gauzens, W4WYR, who decided not to seek a new term after 22 years of service.

A frequent hamfest and convention attendee, Donahue, 56, is in his third term as Georgia SM and has been an Assistant Director since the mid-1980s. He's been a ham for more than 40 years.

In the Southwestern Division, San Diego Section Manager and train operator Tuck Miller, NZ6T, of National City, California, defeated electrical engineer Edward J. "Ned" Stearns, AA7A, of Scottsdale, Arizona. The vote was 2485 to 2208. Miller thus gains the vice director's position being vacated by Art Goddard, W6XD, who ran unopposed for director upon the retirement of Fried Heyn, WA6WZO. Heyn has served as director since 1984.

A ham since 1991, Miller, 48, has served as San Diego SM since 1998 and is active in the Amateur Radio Emergency Service.

Vallio, Donahue and Miller all are ARRL Life Members.

In addition to Goddard, those unopposed for directors' seats were incumbents Jim Maxwell, W6CF, in the Pacific Division; Walt Stinson, W0CP, in the Rocky Mountain Division, Frank Butler, W4RH, in the Southeastern Division and Coy Day, N5OK, in the West Gulf Division.

Vice directors' positions who went unchallenged in this election cycle were incumbents Warren G. "Rev" Morton, WS7W, in the Rocky Mountain Division; and David Woolweaver, K5RAV, in the West Gulf Division.

All unopposed candidates were declared elected. New terms for all successful candidates begin at noon January 1, 2002, and run for three years.

==>DUCIE IS NEWEST DXCC ENTITY! DXPEDITION OPERATION IMMINENT

You might never have heard of it before, but Ducie Island in the South Pacific is the latest DXCC entity--the 335th, according to ARRL Membership Services Manager Wayne Mills, N7NG. A DXpedition was en route. Starting at 0000 UTC on November 16, 2001, Ducie Island became eligible for DXCC credit

as a result of a favorable vote to accept the Pitcairn Island Amateur Radio Association (PIARA) as an International Amateur Radio Union member-society <http://www.iaru.org/rel011116.html>.

PIARA filed its application for IARU membership last March, and the matter went to a world-wide vote of IARU member-societies in June. Votes were counted this week, and PIARA's application was approved. Under DXCC rules, an entity that hosts an IARU society is considered a "political entity."

Mills emphasized that only contacts dated November 16, 2001, and later will count for DXCC. For the moment, that point is a bit academic, however, since the DXpedition team has been delayed in reaching Ducie. The island has been activated previously for the Islands On The Air program (it's IOTA OC-182), but Mills says those earlier contacts will not count for DXCC.

The group will use a VP6 call sign--to be announced. Some operation is planned on all bands, 160 through 6 meters (there will be a 6 meter beacon on 50.110 MHz) on CW, SSB and RTTY. Log checks will be available on the DX Cluster from Japan Web site, <http://www.big.or.jp/~ham/dx.html>.

Pilot station Bill "Dr Bill" Avery, K6GNX, said the team was expected to arrive on Ducie early on November 17. The DXpedition operation should last about five days. Ducie is located east of Pitcairn Island, perhaps best known among hams as the home of Tom Christian, VP6TC, who's PIARA president and head of the Ducie DXpedition team.

Other DXpedition members are Kan Mizoguchi, JA1BK; Dave Brown, VP6DB; Mike McGirr, K9AJ; and Vince Thompson, K5VT, plus JA1SLS/VP6BB, JF1IST, and FO3HO.

The QSL manager is Garth Hamilton, VE3HO, PO Box 1156, Fonthill, ON L0S 1E0, Canada. All 50-MHz QSL requests go to JA1BK.

Ducie Island, about 2.5 square miles, is surrounded by water 3000 meters (9800+ feet) deep and visited only rarely. Due to ecological concerns, only one group may be on the island at a given time. The CQ zone for Ducie is 32; the ITU zone is 63.

More information is available on the JA1BK Web site <http://www.iijnet.or.jp/JA1BK/>.

==>AMATEURS ACTIVATE FOLLOWING NEW YORK AIR CRASH

The Amateur Radio Emergency Service promptly activated in the wake of this week's disastrous plane crash in New York City. Hams responded to support Salvation Army and American Red Cross relief operations after an American Airlines flight went down November 12 in a residential area of the Borough of Queens, near JFK International Airport.

Officials say 265 people died in the air disaster, which came two months and one day after the World Trade Center terrorist attacks in New York City. Investigators say the crash appears to have been related to mechanical failure.

Queens District Emergency Coordinator Mark Phillips, KC2ENI, said that ARES had been planning on up to three days of Amateur Radio support at the request of the Salvation Army Team Emergency Response Network--SATERN. Conventional communication systems returned to service the evening of the crash, however, and ham radio support operations were able to stand down.

The American Red Cross Emergency Communications Service in Queens also activated immediately after the crash. ARC ECS President George Sau, WB2ZTH, reports that members were dispatched with Red Cross disaster action teams to the crash site.

SATERN Amateur Radio Liaison Officer Jeff Schneller, N2HPO, said telephone cables had been destroyed by the crash, cell phone communication "was spotty at best, the Nextels were not working most of the time, and power was cut off to the entire area." SATERN supplied several radio operators plus a net control station. The Rockaway Emergency Coastal Weather Alert also supported the activation.

Schneller contacted the ARES DEC and SATERN members and notified the Electchester VHF and Broadcast Employees Amateur Radio Society of the intended operation. Both groups volunteered had their repeaters during the World Trade Center disaster and did so again November 12. SATERN responders were able to put their "field packs"--used recently for the World Trade Center disaster--into use for the plane crash support operation.

Sau said his ARC Emergency Communications Service was able to immediately provide emergency communication via a UHF repeater as well as on simplex. As a result Red Cross support personnel at the crash site, the temporary disaster Family Information Center at the JFK Ramada Inn, the established Red Cross shelter at Public School 114 in the Rockaways, and the Queens Red Cross chapter operations base were able to remain in contact.

Most of the victims on the plane were bound for the Dominican Republic. Sau said some group members were able to use their fluency in Spanish to support the disaster action team translators at the Family Information Center. Sau said the ARC ECS stood down at around 8 PM.

As he did following SATERN's World Trade Center activation, Schneller advised all amateurs to get involved in ARES or SATERN and to take the emergency communications courses offered by the ARRL <http://www.arrl.org/cce>.

==>AMATEUR RADIO RESPONDS TO MICHELLE'S FURY

Amateur Radio had an extensive emergency communication role during Hurricane Michelle. The late-season storm, boasting winds of up to 135 MPH, swept across Cuba and the Bahamas November 3-5. The Hurricane Watch Net <http://www.hwn.org> and W4EHW at the National Hurricane Center <http://www.nhc.noaa.gov/> in Miami teamed up to provide forecasters with real-time surface reports. At one point, ham radio was a primary means of communication between Cuba and the outside world. Amateur Radio also was used for the first time to communicate directly with a hurricane hunter aircraft as it was in the eye of a hurricane over land.

The storm had lingered as a tropical depression for almost a week, drenching Nicaragua and Honduras before drifting into the Caribbean and regaining strength as a powerful Category 4 hurricane dubbed Michelle. It then tracked northward toward Cuba and intensified. The Hurricane Watch Net and W4EHW activated Saturday, November 3, to collect and relay essential weather data via ham radio. The HWN operates on 14.325 MHz whenever a hurricane is within 300 miles of projected landfall in the Atlantic, Caribbean or Gulf of Mexico.

Anticipating a communication disruption, Hurricane Center Director Max Mayfield requested that W4EHW establish a backup ham radio link with Havana. In addition, permission was secured from the FCC for W4EHW to operate SSB on the Cuban Emergency Net frequency, which is in the US 40-meter CW subband. W4EHW Assistant Amateur Radio Coordinator Julio Ripoll, WD4JR, said a primary W4EHW operation remained on 20 meters, and additional operators were added to each shift.

As Michelle moved over the mainland of central Cuba, "Ham radio was the only form of communication left operating to and from Cuba and within the center part of island nation," Ripoll said. W4EHW on 40 meters then became the only source of current hurricane advisories, and the information was relayed by Cuban amateurs on HF and VHF.

Ripoll says that during Michelle, W4EHW conducted some pre-planned on-the-air testing with the Hurricane Hunter Airplane NOAA-42, piloted by Captain Dave Tennesen NL7MT. The aircraft made several eye penetrations and perimeter passes as the hurricane was over Cuba. Ripoll said W4EHW could barely hear the Hurricane Hunter until both stations moved to 40 meters. Ripoll said the on-the-air tests also checked out a new HF antenna on the aircraft.

As Michelle moved into the Bahamas, hams and boaters there sent reports throughout the day on Monday, November 5. Ripoll said that one of the most important communication from the Bahamas came from Wayne Wilkinson, KC4CYK/C6A, on his 42 foot sailboat docked at Highbourn Cay. By then, Ripoll said, hurricane forecasters were considering lowering the warnings, but after Wilkinson called in with winds gusting to 115 MPH, the warnings remained up a while longer.

The Hurricane Watch Net and W4EHW secured operation later on November 5. Ripoll and Assistant HWN Manager Mike Pilgrim, K5MP expressed their appreciation for the dozens of volunteers who participated as well as for the clear frequency.

The Northern Florida Emergency Net also activated during Hurricane Michelle.

==>ISS COMMANDER BUOYS SPIRITS AT NYC "GROUND ZERO" SCHOOL

International Space Station crew commander Frank Culbertson, KD5OPQ, has fielded questions from students at seven schools since the end of November. These included a morale-boosting contact with New York City's Public School 234, whose students are in temporary quarters after the September 11 World Trade Center attacks.

Ten students in Francine Cornelius's computer class posed 20 questions during the 10-minute contact November 7. Student Renee Otto asked Culbertson how New York City looked from space on September 11. Culbertson described the smoke from the site as it looked from space. "It's sad that you've had to move from school to school, but we're proud that you're continuing to work and take your education seriously," Culbertson told the students. PS 234's normal campus is only two blocks from "Ground Zero."

The nearly 700 students and faculty had to be evacuated on September 11. Principal Anna Switzer said the students were grateful for the opportunity to chat with Culbertson, who operated at NA1SS.

The previous week, on October 29, 17 fifth graders at Protsman and Kolling elementary schools in St John, Indiana, spoke with Culbertson, who told one student that sunrise "is gorgeous from outer space." John Gianotti, W9WY, acted as control operator for the direct QSO.

On November 1, Culbertson spoke with 10 mostly teenaged students at Sanilac Career Center in Peck, Michigan. Electronics teacher Ted Davis, KF8ZO, pulled double duty as radio operator for the direct contact.

Students at Carmel, Indiana's, Woodbrook Elementary School, including Culbertson's nephew, Tom, were up November 2. Culbertson told Woodbrook students that while he will miss the International Space Station when he leaves in December, he is looking forward to being reunited with his family.

On November 6, students at Kenosha, Wisconsin's Tremper High School enjoyed their 10 minutes with Culbertson, who later praised the students' intelligent questions and thanked ARISS relay Tony Hutchinson, VK5ZAI, in Australia, who facilitated the contact.

Students at Phillips Middle School in Chapel Hill, North Carolina, interviewed Culbertson November 9. Seventh grade science teacher Barbara Pedersen, KE4JZM, operated the station for her students. "It brings the kids so much closer to the space program" Pedersen said. "It makes it so much more real. The kids were so excited."

All of the ham radio contacts were arranged as part of the Amateur Radio on the International Space Station--or ARISS--program.

==>DAVID CLARK, KB6TAM, OFFICIALLY COMPLETES GLOBAL SAIL

Ham radio's senior sailor David Clark, KB6TAM, this week officially completed his solo round-the-world sail--becoming the oldest person to do so. But Clark does not plan to celebrate his accomplishment until he returns to his starting point in December.

Clark, who's 77, arrived in Great Inagua, the Bahamas, earlier this week, technically completing the circumnavigation that began in Fort Lauderdale, Florida, in December 1999. He had spent much of the Atlantic hurricane season in Trinidad. Clark is due back in Fort Lauderdale on December 7 for a gala celebration. He was scheduled to depart Great Inagua November 15 on his way to Nassau. Earlier in the month, he managed to avoid a confrontation with Hurricane Michelle, which raked Cuba and parts of the Bahamas.

Clark has been using ham radio while under way. He's kept in touch with Eric Mackie, 9Z4CP, whom he got to know in Trinidad. Clark's wife, Lynda, reports that Fred Moore, W3ZU, has been able to patch calls via ham radio to her a couple of times.

Among those greeting Clark when he arrived in St Croix last week was ARRL Virgin Islands Section Manager John Ellis, NP2B. Ellis, who says Clark "gets around like someone who is 37," had dinner with the ham-sailor during his St Croix stopover and introduced him to the amateur community there.

Once in Nassau, Clark plans to again play clarinet for his friend Eloy Roldan at the Poop Deck restaurant until it's time for him to leave for Gun Key or Bimini--a scant 12 hours from Fort Lauderdale.

"It's getting really exciting!!" Lynda Clark enthused in an e-mail dispatch this week.

Clark's sailing companion--his dog Mickey--was lost and Clark himself nearly died after his first sailing vessel, the Mollie Milar, sank last February off South Africa. Clark bought another sailboat that he named Mickey and resumed his quest in April.

For more information on Clark's journey, visit the David Clark Web site, <http://www.dclark.com>.

==>SOLAR UPDATE

Sun worshipper Tad Cook, K7VVV, Seattle, Washington, reports: Average sunspot numbers and solar flux rose this week. Daily sunspot number averages were up nearly 48 points, and average solar flux was up nearly six points. Geomagnetic indices finally settled down, conditions were quiet, and the planetary A index was in the single digits on every day.

Monday was very quiet, with a planetary A index of two, mid-latitude A index of one, and both planetary and mid-latitude K indices at zero or one for most of the day. Combined with a rising solar flux, this was a good day for HF propagation.

Solar flux is expected to decline over the next few days. Predicted flux values for Friday through Monday are 205, 205, 195 and 190. Solar flux should rise above 210 again after November 23.

No geomagnetic disturbances are expected over the next few days, which should be good for the ARRL November Sweepstakes phone weekend. Besides the contest, this weekend will be good for watching the Leonids meteor shower. This will be one of the best displays in years. It occurs Sunday morning across North America around 0900-1100 UTC, and around California and the Pacific at 1100-1500 UTC.

Sunspot numbers for November 8 through 14 were 216, 175, 258, 222, 252, 234 and 222, with a mean of 225.6. The 10.7 cm flux was 247.8, 270.8, 245.9, 234, 227.3, 231.6 and 217.2, with a mean of 239.2. Estimated planetary A indices were 5, 4, 6, 4, 2, 3 and 3, with a mean of 3.9.

==>IN BRIEF:

* This weekend on the radio: The ARRL November Sweepstakes (SSB), the North American Collegiate ARC Championship (SSB, held in conjunction with November Sweepstakes), the LZ DX Contest (CW), the Carnavales de Tenerife Contest, and the RSGB 1.8 MHz Contest (CW) are the weekend of November 17-18. JUST AHEAD: The CQ Worldwide DX Contest (CW) is the weekend of November 24-25. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Jean Butler, wife of Southeastern Director Frank Butler, W4RH: Jean Butler, the wife of ARRL Southeastern Director Frank Butler, W4RH, died November 13. A retired elementary school teacher, she had suffered a stroke two years ago. Prior to her illness, she had often accompanied her husband on trips to conventions, committee meetings and International Amateur Radio Union (IARU) Region 2 conferences. "Jean was a friend to many on the ARRL Board and was well known throughout the Southeastern Division through her support of Frank," said ARRL Executive Vice President David Sumner, K1ZZ. "We will miss her." Outgoing IARU Region 2 President Tom Atkins, VE3CDM, called Jean Butler "a gracious lady who will be missed by everyone." The funeral was set for November 17, 11 AM, at the First United Methodist Church, 103 First Street, Fort Walton Beach, Florida (32548). Memorial donations were invited to the church's music ministry.

* North Korea (P5) is on the air: North Korea, the DXCC entity that tops everyone's most-wanted list, was activated this month by Ed Giorgadze, 4L4FN, of the Republic of Georgia. The operation has not yet been approved for DXCC credit, however. On the basis of oral permission from North Korean authorities, Giorgadze has been operating as P5/4L4FN since early this month. Bruce Paige, KK5DO, reports that 4L4FN now is awaiting written permission from the North Korean government--something that's required for ARRL DXCC credit. As a result, it's possible the recent contacts will not count for DXCC. Paige is posting P5/4L4FN operating news on his Web site <http://www.amsatnet.com/p5.html> and to other DX news sites.

* Florida amateurs to participate in meteor shower test: Amateur Radio operators in Florida will cooperate with their state's Division of Emergency Management to test communication systems during the Leonid meteor shower. The tests will be conducted during a 12-hour period centered around the expected peak of the meteor shower, 9 PM on Saturday, November 17. The Leonid meteor shower this weekend is expected to be even more intense than last year's, and some experts believe the potential exists for it to disrupt communication systems--including terrestrial and satellite. Additional details are on the ARRL Web site <http://www.arrl.org>.

* Amateur Radio shines during NPR broadcast: Amateur Radio was in the national spotlight during the November 13 "Tech Tuesday" segment of National Public Radio's "Public Interest" program. The show originates from WAMU-FM in Washington, DC, and is carried by some three dozen US public radio stations. Two well-known hams were the featured guests of program host Kojo Nnandi--Amateur Radio on the International Space Station Board Chairman

Frank Bauer, KA3HDO, and Automatic Position Reporting System guru Bob Bruninga, WB4APR. Both men are involved in technical professions, and both credited Amateur Radio with inspiring their career choices. During the program, Bauer and Bruninga covered a wide swath of common Amateur Radio activities, including digital modes. The lively, informative segment was complemented by a series of callers--most of them also Amateur Radio licensees--who offered additional insights into ham radio or who wanted to share a story. The program segment remains available on the WAMU Web site <http://www.wamu.org>. Click on "Public Interest" in the program directory.

* FCC announces mail changes for Gettysburg office: Effective immediately, the FCC is diverting mail, courier and hand deliveries for its Gettysburg, Pennsylvania, office to rear entrance, 35 York St, Gettysburg, PA 17325. the FCC said the US Postal Service will continue to accept mail addressed to 1270 Fairfield Road, Gettysburg--the building's physical location. The FCC said the changes were necessary to protect the health and safety of its employees.--FCC

* Operations accepted for DXCC credit: Several DX operations have now received approval for DXCC credit. They are: ZK1NJC, North Cook Island; T5X, Somalia; OJ0VR, Market Reef; and HK5QGX/0M, Malpelo Island. Those who previously submitted these entities and were denied credit may contact DXCC <dxcc@...> and have their records updated without having to resubmit cards. For more information, contact ARRL DXCC Manager Bill Moore, NC1L, dxcc@....

* Vote on QST Cover Plaque Award: The winner of the QST Cover Plaque Award for October was Nick Powell, NH6ON, for his article "A Ham's South Pole Adventure." Congratulations, Nick! The winner of the QST Cover Plaque award--given to the author of the best article in each issue--is determined by a vote of ARRL members. Voting takes place each month on the Cover Plaque Poll Web page, <http://www.arrl.org/members-only/qstvote.html>. As soon as your copy arrives, cast a ballot for your favorite article in the November issue of QST. Voting ends November 30.

* Earl H. "Howie" Mann, W2FR, SK: Howie Mann, W2FR, of Liverpool, New York, died October 27. He was 80. A radio operator in the Navy during World War II, Mann was an Eastern Area net control station for approximately 35 years. He became a Transcontinental Corps Director, chairman of the Eastern Area staff of the NTS in the 1970s and served as the Second Region Net manager. An ARRL member and member of the A1 Operator Club, Mann was an active DXer with 356 countries confirmed. "W2FR was truly a legend in his own time and one of the nicest people you could ever have the pleasure knowing," said Western New York ARRL Section Manager Scott Bauer, W2LC.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; http://www.arrl.org. Jim Haynie, W5JBP, President

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb at http://www.arrl.org for the latest news, updated as it happens. The ARRLWeb Extra at http://www.arrl.org/members-only/extra offers ARRL members access to informative features and columns.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

383. proxy night owls net control.

Yahoo group: m_a_r_s
Date: 2001-11-17 11:18:03 UTC
From: vu2nlf
Topic: 383 Message: 383

dear friends,

The Night Owls Net controllers , VU2NFS - Nafisa Shikari & VU2WLL - Vispy Mirza both are unavailable for the next three weeks, hence to continue with the tradition of our night owls net, the net will be controlled for the next three weeks by VU2NLF - Nilesh on 145.100 Mhz at 22:00 hours sharp.

All hams are requested to kindly check on to the net and increase the VHF activity.

dear friends,

MARS will conduct a disaster communication simulation exercise (Scramble Team) on 1st & 2nd Dec 2001 (Saturday & Sunday) all hams wishing to participate from field or from base (bombay) should contact me to confirm their participation by 20 Nov 2001.

The exercise will be very real and will include CW, RT, RTTY, SSTV and packet Radio.

Topic: 386 Message: 390

Thanks Nilesh for the posting.

The first UHF net on 436.000Mhz for the city of Mumbai was conducted on Sunday, the 11th November 2001.The following were the check-ins:
?on UHF simplex: vu2nlf,vu2vvp,vu2wll,vu2pjm,
?thru repeater: vu2iia .

The 2nd weekly net was held on Sunday, the 18th Nov'2001 and following checked into the net:2vvp,2nlf?UHF and 2opx,3mhc,2iia,3mwh?.thru repeater.

Thanks are due to Vijay,VU2VVP and Rajen,VU2RIG for providing their stn as repeater for vhf on 145.100.Those of you who do not have UHF can still check into the net from their VHF set (as one of the idea is to revive morning net...ableit on sunday only to begin with).

We (MARS) understand that there are many hams who have UHF capability but do not have proper (external) antenna. MARS has, therefore, conducted it's first Antenna workshop today i.e. on 18th Nov?2001 at ShishuVihar School, Dadar. NLF will decide the next date for Antenna workshop to (it has been decided to..) homebrew a slimjim for UHF (which probably can be installed onto your existing antenna mast and hooked together by T connector). Those who are interested in having a slimjim may give his/her willingness to NLF/HIT so that raw material can be procured at once. Please note that cost works out to be Rs.100/- per head.

Importance of antenna (system) need no elaboration and my earnest request to all members is to attend such workshops in large numbers?and if more and more members are forthcoming one of the future project could be converter for UHF.

Happy hamming???

De Prashant,vu2cbu

vu2nlf@... wrote
Dear Friends,

MARS has started a UHF net (Thanks to VU2CBU - Prasant Koli) on sundays at 08:00 Hours on 436.00 Mhz.

The net will be controlled by VU2CBU - Prasant Koli, all hams having the UHF capability can join us on the air.

All hams having the UHF capability, but does not have UHF external antenna can join us for the antenna homebrewing workshop at 10:00 am on sunday

Southeastern Division Convention is December 1-2
New York City-Long Island to host Ham Radio University 2002
WRTC 2002 announces remaining national team pairings
FCC announces Homeland Security Policy Council

+Available on ARRL Audio News

============================================================

==>MAIL DISRUPTIONS LEAD TO VANITY PROCESSING SUSPENSION

Recently announced changes in how the FCC's Gettysburg office is receiving
and handling mail have effectively halted processing of Amateur Radio vanity
call sign applications. The ARRL has learned that the FCC has processed
vanity applications received through October 14 and that vanity applications
received after that date remain on hold for the time being.

"We understand that mail directed to the FCC Gettysburg office beginning
October 15 was being held pending the start of special handling precautions
to address any biohazard contamination concerns," said ARRL VEC Manager Bart
Jahnke, W9JJ. On a positive note, Jahnke said, the FCC is tracking the
receipt date for each piece of mail.
```

Because the FCC gives equal priority to paper and electronic vanity applications, Jahnke explained, all vanity processing was being suspended until the mail situation is resolved. Citing a need for heightened security measures, the FCC announced November 14 that it had moved the Gettysburg office's mailroom offsite, to the rear entrance of 35 York St, Gettysburg, PA 17325.

The FCC did not announce, however, that mail received at Gettysburg starting October 15 had not yet been opened, pending arrangements to handle it without the possibility of endangering personnel. Jahnke said vanity processing should resume once the FCC begins to open its mail backlog. Just when that might happen is not yet known. Vanity processing typically takes 18 days.

The Gettysburg office is where the Wireless Telecommunications Bureau processes Amateur Radio applications and issues licenses. It's also where Special Counsel for Amateur Radio Enforcement Riley Hollingsworth has his office.

Jahnke said the mailroom situation also could affect some Amateur Radio renewals. He said amateurs who filed timely renewal applications may continue to operate beyond a license's expiration date, if the mail delays cause the license to lapse before the renewal occurs. "For persons filing for renewal near the end of their two-year grace period, their applications will be accepted for processing if they arrive at FCC before the grace period expires."

The FCC said the US Postal Service will continue to accept and will divert all mail addressed to 1270 Fairfield Road, Gettysburg--the office's physical location--to the off-site mailroom. Until November 30, the FCC itself will divert overnight courier deliveries for 1270 Fairfield Road to the off-site mailroom.

==>DUCIE ISLAND DXPEDITION IS CANCELED EN ROUTE

High seas this week forced the Ducie Island DXpedition team to abandon its already-delayed effort to reach the newest DXCC entity, located in the South Pacific. Kan Mizoguchi, JA1BK, announced November 19 that the DXpedition was cancelled and that the team--aboard the tri-hull sailing vessel Temarama and at that point some 80 nautical miles from its destination--was turning around and heading back to Pitcairn Island.

"This obviously is a big letdown for the team and DXers around the globe," said The Daily DX and QST "How's DX" Editor Bernie McClenny, W3UR, "however the Ducie Island operators were concerned for their safety." McClenny called on DXers around the world to support the Ducie team's decision to turn back in the interest of safety.

Ducie pilot station Bill "Dr Bill" Avery, K6GNX, said JA1BK and the Ducie team were scheduled to leave Pitcairn November 22 to return to the Gambier Islands for their flights home. But before they left, Mike McGirr, K9AJ, an emergency room doctor, and Vince Thompson, K5VT, a surgeon, fielded medical questions from island residents. There is no doctor on Pitcairn. Avery said

that JA1BK has donated the team's antennas and masts and two generators to the Pitcairn Island Amateur Radio Association for use by a future DXpedition.

Forecasts at the time of the decision to turn back called for at seas of at least 3 meters (approximately 10 feet) around the newest DXCC entity. Avery said that, between the rough seas and having to shut down the diesel engines to clean the fuel filter every few hours, it was just too risky to attempt a landing. Earlier, poor weather and a container ship in the Pitcairn harbor had delayed efforts to load passengers and equipment aboard the vessel. The team had hoped to arrive on Ducie in time to begin operation last weekend, using the call sign VP6DI.

Ducie Island became the 335th DXCC entity last week. Ducie contacts made on or after November 16, 2001, will be eligible for DXCC credit as a result of a favorable vote to accept the Pitcairn Island Amateur Radio Association as an International Amateur Radio Union member-society <http://www.iaru.org/rel011116.html>. Ducie Island has been activated previously for the Islands On The Air program (it's IOTA OC-182), but those earlier contacts will not count for DXCC.

==>FCC LETS DELIBERATE INTERFERENCE WARNING NOTICE STAND

FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth will let stand a Warning Notice sent to a Pennsylvania licensee following accusations of deliberate interference. The complaint--which arose in part from split-frequency contest operation--alleged that K3NM failed to shift frequency after being notified that the station's signal was interfering with an ongoing contact.

The FCC Warning Notice and its routine publication by ARRL and other media ruffled some feathers within the contesting community. Some worried that "both sides of the story" were not being told; others complained about the public airing of unproven allegations.

John King, K5PGW, of Louisiana complained to the FCC after the September 9 incident, which occurred while K3NM was operating split mode on 40-meter SSB during the Worked All Europe Contest. Following up, Hollingsworth sent a Warning Notice September 12 to K3NM licensee Joseph Brue Jr.

King--an attorney--asserted that he was operating mobile and in QSO with Roy Ezell, K9ROY, in Kentucky when K3NM came on frequency without asking if it were in use and began calling "CQ contest." King told the FCC that he and K9ROY attempted to alert the K3NM operator--Matt Vanni, LU9AY/W1--but were unable to do so, because K3NM was listening on 7.083 MHz, outside the US phone band.

King said that Ezell twice telephoned Brue, letting him know his station was interfering and asking him to move. King maintained that the interference continued, even after the second telephone call.

Vanni subsequently told the FCC that he could not hear K5PGW or K9ROY, even after the telephone calls, so he continued operating. Vanni told the FCC that K3NM's two-element beam at 112 feet was on the opposite heading from the complainant's location. He also said that he always uses the transceiver's "dualwatch" feature to monitor his transmitting frequency when working split on 40 SSB.

Brue also wrote the FCC, confirming Vanni's version of events to the FCC and adding that Vanni had asked several times if the frequency--7.210 MHz--was in use before transmitting. Brue also verified receiving the two phone calls from the complainants.

After deliberating over the various assertions, Hollingsworth said in an October 30 letter to Brue that he was standing behind his Warning Notice and said it would remain in the licensee's file.

"You could not be expected to protect communications you could not hear, and it may be normal that with such an efficient antenna system you may not have heard certain stations from the back of the beam antenna," Hollingsworth allowed. "The fact remains, however, that both you and Vanni had notice, directly from the complainant operator in two separate telephone calls, that your station was indeed interfering with specific ongoing communications."

Hollingsworth said that, given the two telephone calls, "it was not good Amateur practice to merely ignore the protests of the complainant and continue operating the station without a good faith attempt at compromise or corrective action."

==>SECTION MANAGER ELECTION RESULTS

Section manager election results have been announced for Tennessee, Alaska and Alabama. It was a squeaker in Tennessee, where Terry Cox, KB4KA, of Collierville, edged out David Bower, K4PZT, 540 to 538. Cox and Bower were vying for the honor of succeeding O.D. Keaton, WA4GLS, who decided not to run for another term. Keaton had served two stints as SM in the Volunteer State--from 1971 until 1979 and from 1992 until the present.

In Alaska, incumbent SM L. Kent Petty, KL5T, beat back a challenge from David W. Stevens, KL7EB. The final vote was 154 to 104. But despite his victory, Petty--who has been Alaska's SM since January 2000--has decided that he no longer wants the position. He plans to step down in January, leaving ARRL Field and Educational Services Manager Rosalie White, K1STO, to appoint a successor.

In Alabama, incumbent SM Bill Cleveland, KR4TZ, defeated Chris Sells, AC4CS, 391 to 153. Cleveland has served as Alabama SM since March 1999.

Ballots were counted November 20 at ARRL Headquarters. Due to the closeness of the Tennessee race, counters reviewed the ballots four times. Two-year terms for successful candidates begin January 1.

In related news, White has appointed John J. Cline, K7BDS, to succeed Michael Elliott, K7BOI, as Idaho SM, effective January 1. Elliott is resigning because of increased career responsibilities. Cline lives in Boise

and is a former San Diego SM.

White now is considering possible replacements for Georgia SM Sandy Donahue, W4RU, and San Diego SM Tuck Miller, NZ6T. Donahue and Miller recently were elected as vice directors in the Southeastern and Southwestern divisions, respectively. They assume their new offices January 1.

==>KD5OPQ DOES FIRST SPACE WALK; NEW ISS CREW IN THE WINGS

International Space Station Expedition 3 Commander Frank Culbertson, KD5OPQ, and Pilot Vladimir Dezhurov conducted a five-hour space walk, or extra-vehicular activity (EVA), as NASA calls it, on November 12. The EVA--Culbertson's first, but the last for the current crew--completed the external outfitting of the PIRS docking compartment on the ISS. Flight Engineer Mikhail Tyurin monitored the activities from inside the ISS and operated the robotic arm, providing television views for flight controllers in Houston and Moscow.

The ISS Expedition 4 crew of Commander Yuri Onufrienko and Flight Engineers Dan Bursch, KC5PNU, and Carl Walz, KC5TIE, launches aboard the shuttle Endeavour November 29. In addition to a new crew, new Amateur Radio antennas are manifested aboard the shuttle for transport to the ISS. The new antennas will be installed around the perimeter of the Service Module, allowing future operation from HF to microwave frequencies. The HF antenna is made up of a flexible tape that will work on 10-meters--and possibly 15 and 20 meters.

The ISS is on orbit at an average altitude of 247 statute miles above Earth. For more information about the ISS, visit NASA's Human Space Flight Web site, <http://spaceflight.nasa.gov/>.--NASA, ARISS, via AMSAT News Service

==>FAR ANNOUNCES 2002 SCHOLARSHIPS

The Foundation for Amateur Radio, a non-profit organization headquartered in Washington, DC, plans to administer 62 scholarships for the 2002-2003 academic year. FAR--composed of more than 75 local area Amateur Radio Clubs--fully funds seven of these scholarships using the income from grants and its annual hamfest. The remaining 55 are administered by FAR without cost to the donors.

Amateurs Radio licensees may compete for these awards, if they plan to pursue a full-time course of studies beyond high school and are enrolled in or have been accepted for enrollment at an accredited university, college or technical school. The awards range from $500 to $2500. Preference in some cases goes to residents of certain geographical areas or to those pursuing certain academic programs. FAR encouraged clubs--especially those in Delaware, Florida, Maryland, Ohio, Pennsylvania, Texas, Virginia and Wisconsin--to announce and promote these scholarship opportunities.

For more information or an application, send a letter or QSL card, postmarked prior to April 30, 2002, to FAR Scholarships, PO Box 831, Riverdale, MD 20783. The Foundation for Amateur Radio is an exempt

organization under Section 501(c)(3) of the Internal Revenue Code of 1954. It is devoted exclusively to promoting the interests of Amateur Radio and those scientific, literary and educational pursuits that advance the purposes of the Amateur Radio Service. For more information, visit the FAR Web site <http://www.amateurradio-far.org/>.

==>SOLAR UPDATE

Solar sage Tad Cook, K7VVV, Seattle, Washington, reports: Because of the short work week and ARRL Headquarters schedule (ARRL was closed Thursday and Friday, November 22-23), this update was prepared November 21 and lacks the usual solar flux, sunspot numbers and geomagnetic data.

Jeff Hartley, N8II, in West Virginia (FM19) reported the best European 6-meter opening of this solar cycle on November 16. He reports working 117 Europeans from 1340 to 1728 UTC. He said British calls dominated, but he also worked as far east as Poland and Bulgaria. Europeans were working as far west as Ohio, Michigan, Arkansas and Texas.

It has been a quiet week, with no big geomagnetic upsets. The most active day was Monday, when the planetary A index was 16 and K indices went as high as four. Solar flux and sunspot numbers have been declining.

The latest projection calls for solar flux of 180, 175, 170, 170 and 175 for Wednesday through Sunday, and planetary A indices of 10, 10, 10, 8 and 8 for those same days. Although the forecast is for moderate A indices, there is a chance that sunspot 9704 could emit some Earth-directed explosions.

==>IN BRIEF:

* This weekend on the radio: The CQ Worldwide DX Contest (CW) is the weekend of November 24-25. JUST AHEAD: The TARA RTTY Sprint, the TOPS Activity 80-Meter Contest, the Tennessee QSO Party and the QRP ARCI Holiday Spirits Sprint are the weekend of December 1-2. The ARRL 160-Meter Contest is the weekend of December 8-9. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Reminder: Be sure to identify properly when operating digital modes: The ARRL reminds operators who are active on the digital modes, including RTTY, PSK31, packet, PACTOR and AMTOR, to identify properly in accordance with FCC Part 97 rules (Section 97.119). The rules require a station (except space or telecommand stations) to transmit its assigned call sign on its transmitting frequency at the end of each communication and at least every 10 minutes during a communication. Part 97 also states: "No station may transmit unidentified communications or signals, or transmit as the station call sign any call sign not authorized to the station." Amateurs monitoring unidentified or otherwise suspicious digital transmissions should report details to FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth, <rholling@...>. Recordings of such transmissions also are

invited.

* International Humanitarian Award nominations due December 31: How many "unsung heroes" are in the world today? December 31, 2001, is the nomination deadline for the ARRL 2001 International Humanitarian Award. This award is dedicated to those amateurs who, through Amateur Radio, are devoted to promoting the welfare of mankind. Any radio amateur or group of amateurs worldwide who has provided extraordinary service through their Amateur Radio skills for the benefit of others in times of crisis or disaster is qualified to receive the award. To nominate, send a brief description of the events and actions as well as contact information for the nominee to Jean Wolfgang, WB3IOS <jwolfgang@...>. The 2000 winner of the International Humanitarian Award was the Hurricane Watch Net and Net Manager Jerry Herman, N3BDW <http://www.arrl.org/news/stories/2001/01/25/2/>.

* New microwave column to debut in January QST: QST is proud to present the debut of a new bimonthly column, "Microwavelengths," starting in the January 2002 issue. The column editor is Tom Williams, WA1MBA. Williams holds a graduate degree in computer science and directs the development of imaging, software and millimeter-wave technologies as a consultant. His ham radio interests are primarily VHF, UHF and microwaves, and he is active on all bands from 144 MHz to 10 GHz from his home in Shutesbury, Massachusetts. He has done some pioneering work in the EHF bands of 120 and 145 GHz. Originally licensed as K1URO at the age of 15, Williams says he finds great satisfaction in getting on a new band and making a tough microwave contact.

* ARRL test fee to remain at $10: The ARRL Volunteer Examiner Coordinator Amateur Radio test fee will remain at $10 for 2002. The 2002 National Exam Day dates are (spring) April 27-28 and (fall) September 28-29, 2002--the last full weekends in April and September each year.

* W1AW schedules transatlantic, OSCAR celebrations in December: Maxim Memorial Station W1AW will be on the air December 3-7 to honor the 80th anniversary of the 1921 transatlantic tests. Listen for W1AW/80 on many HF, VHF and UHF bands (including satellites). W1AW also will celebrate the 40th anniversary of the first Amateur Radio satellite--OSCAR I--launched into orbit on December 12, 1961. W1AW will be on the air as W1AW/40 December 10-14 on as many of the active satellites as possible. A special QSL will be available for contacts or SWL reports on both events. QSL requests for W1AW/80 and W1AW/40, 225 Main St, Newington, CT 06111. Include a self-addressed, stamped envelope (or appropriate number of IRCs) with each request.

* ARRL HQ gains another ham: ARRL Book Team Secretary Helen Dalton, KB1HLF, is the latest addition to the roster of hams on the ARRL HQ staff. Dalton received her Technician ticket November 19. The very next day she made her first four contacts in rapid succession. Senior Assistant Technical Editor Larry Wolfgang, WR1B, made the first lunch-time 2-meter contact from his office to hers. That was followed in rapid succession by QSOs with Club and Educational Correspondent Margie Bourgoin, KB1DCO, and Educational Programs Coordinator Jean Wolfgang, WB3IOS. Dalton and 14 classmates graduated from a

recent Technician licensing class at which ARRL President Jim Haynie, W5JBP, signed each student's certificate of class completion.

* Southeastern Division Convention is December 1-2: The ARRL Southeastern Division Convention will be held December 1-2 at the Manatee County Civic Center, Palmetto, Florida, in conjunction with the 26th annual Tampa Bay Hamfest. Featured speaker is ARRL President Jim Haynie, W5JBP. ARRL Lab Supervisor Ed Hare, W1RFI, will offer five technical presentations. The full slate of convention program topics includes the Amateur Radio Emergency Service, the National Traffic System, low-power (QRP) operating, PSK31, SKYWARN ARES, NTS, QRP, PSK-31, and SKYWARN. Amateur Radio examinations also will be offered. For more information, visit the Tampa Bay Hamfest Web site, <http://www.fgcarc.org> or e-mail info@....--Paul Knupke, N4PK

* New York City-Long Island to host Ham Radio University 2002: The New York City-Long Island Section Convention January 20, 2002, will include the third annual Ham Radio University. HRU 2002, a technical education forum, will feature 20 hour-long presentations, with forums geared to the nonham as well as to the experienced amateur. The focus will be hands-on, with many demonstrations including emergency communication techniques. An "Ask the Experts" forum and an HF special event station will round out the day. The convention, sponsored by the Great South Bay Amateur Radio Club, will be held at the Babylon Town Hall Annex, Phelps Lane, North Babylon, Long Island, New York. For more information on HRU 2002, contact NYC-LI Section Manager George Tranos, N2GA, <n2ga@arrl.org>.

* WRTC 2002 announces remaining national team pairings: The WRTC 2002 committee has announced that all national teams have now been selected for next year's event in Finland. Czech Republic: Vojta Zeman, OK2ZU, and Karel Karmasin, OK2FD; Spain: Eduardo Satrk, EA3NY, and Fernando Martines, EA3KU; Belgium: Mark Demeuleneere, ON4WW, and Peter Casier, ON6TT; Poland: Bogdan Chorazyk, SP3RBR, and Andrzej Jarzabkowski, SP8NR; France: Gerard Parat, F6GFZ, and Laurent Blin, F5NLY; Japan: Koji Tahara, JM1CAX, and Satoshi Nakamura, JE1JKL; Italy: Stefano Brioschi, IK2QEI, and Maurizio Panicara, I4JMY. Team Asiatic Russia has changed. The new team is Mikhail Klokov, RZ9UA, and Gennadij Kolmakov, UA9MA. The deadline for "wildcard" team applications is November 30, 2001. Visit the WRTC 2002 Web site <http://www.wrtc2002.org> for more information.

* FCC announces Homeland Security Policy Council: The FCC has announced the creation of a Homeland Security Policy Council. The Council's missions are to assist the Commission in evaluating and strengthening measures for protecting US communications services; to assist the Commission in ensuring rapid restoration of communications services and facilities that have been disrupted as the result of threats to, or actions against, our Nation's homeland security; and to ensure that public safety, health and other emergency and defense personnel have effective communications available to them to assist the public as needed. The Homeland Security Policy Council will consist of senior staff from each of the Commission's bureaus and will be directed by FCC Chief of Staff Marsha MacBride. Deputy directors will be Linda Blair and Brad Berry, both deputy chiefs in the Enforcement Bureau.

Peter Tenhula, Senior Legal Advisor to Chairman Powell, will serve as Special Counsel.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who

receive The ARRL Letter via this listserver.)

==>SPACE WALK SET TO FIX ISS DOCKING PROBLEM

Speaking via Amateur Radio November 30, International Space Station crew
chief Frank Culbertson, KD5OPQ, told youngsters in South Carolina that a
space walk scheduled for December 3 will attempt to fix a Progress supply
rocket docking problem. The faulty docking was holding up the launch of the
fourth ISS crew.

Culbertson said the Russian Progress rocket, which arrived November 28, was
not completely attached to the ISS. "It's firmly attached with some latches,
but it doesn't have the right hooks engaged to make it really, really
```

strong," Culbertson explained to youngsters gathered at the South Carolina State Museum in Columbia. "So, on Monday, two of the crew members are going to do a space walk to try to find out what is blocking the hooks and see if we can get that cleared and complete the latching."

Culbertson made the comments during a scheduled Amateur Radio on the International Space Station--or ARISS--school contact. NASA later confirmed the spacewalk schedule. Russian Progress supply rockets are programmed to dock automatically with the ISS.

NASA says the two Russian crew members aboard the ISS--Mikhail Tyurin and Vladimir Dezhurov--will carry out Monday's space walk at 1330 UTC. NASA has re-set the shuttle Endeavour launch for December 4, 2245 UTC, from Kennedy Space Center.

The Expedition 4 crew of Commander Yuri Onufrienko and Flight Engineers Dan Bursch, KC5PNU, and Carl Walz, KC5TIE, was to head into space November 29. They are scheduled to replace the current crew of Culbertson, Tyurin and Dezhurov, who have been aboard the ISS since August.

In addition to the replacement crew, new Amateur Radio antennas are stowed aboard the shuttle for transport to the ISS. Once they arrive , the new antennas will be installed around the perimeter of the Service Module, allowing future operation from HF to microwave frequencies.

For more information about the ISS, visit NASA's Human Space Flight Web site, <http://spaceflight.nasa.gov/index.html>.

==>COMMENTS DUE FEBRUARY 12 IN "BAND THREAT" PROCEEDING

Comments are due February 12, 2002, in an FCC Notice of Proposed Rule Making and Order, ET Docket 01-278, that ARRL has targeted as a potential band threat. Reply comments are due on March 12, 2002. The proceeding deals in part with a potential threat to the popular 70-cm band from Part 15 RF identification devices proposed for deployment between 425 and 435 MHz.

SAVI Technology, which markets radiolocation and wireless inventory control products, told the FCC it needs the rules changes to satisfy customer demand for increased RFID system capabilities. The FCC has proposed to allow operation of RFIDs as unlicensed Part 15 devices in the 425-435 MHz band with transmissions of up to two minutes at field strengths now only permitted for extremely short-duration, intermittent control signals.

The ARRL has argued that under the Communications Act of 1934 the FCC lacks authority to permit unlicensed devices with substantial interference potential and that such devices must be licensed. The League also is looking into the interference potential posed to 20 meters by a proposal to increase the maximum emission levels permitted by Part 15 devices operating at 13.56 MHz, as well as the maximum level of out-of-band emissions.

Commenters are advised to read paragraphs 20-27 of the NPRM&O, available on the ARRL Web site <http://www.arrl.org/news/stories/2001/10/19/1/290a11.html>. Interested

parties may file comments using the FCC's Electronic Comment Filing System, <http://www.fcc.gov/e-file/ecfs.html> (search using "01-278"). Commenters should include full name, US Postal Service mailing address, and applicable docket or rule making number--in this case ET 01-278.

It's also possible to e-mail comments via the ECFS. To obtain e-mail filing instructions, commenters should send an e-mail to ecfs@... and include the words "get form <your e-mail address>" in the body of the message. A sample form and directions will be sent by reply e-mail.

==>AO-40 TRANSPONDER HIATUS LOOMS

Necessary adjustments to AO-40's attitude to compensate for unfavorable sun angles over the next several months will silence the satellite's transponders for a while. Recent reports indicate that AO-40 continues to operate well, providing coverage between many parts of the world.

Command station team member Stacey Mills, W4SM, says, however, that he's puzzled and disappointed by the relatively low numbers of users on AO-40 during the last month or so. "I'm not sure why," he told ARRL this week. "This is prime time, and we won't have such good conditions much longer until the three-month 'bad angle' cycle passes."

A scheduled attitude shift to compensate for the unfavorable sun angle will leave AO-40's antennas pointing away from Earth until next spring and lead to a transponder shutdown period that could start as soon as late December. The satellite is currently in a long period during which Earth eclipses the sun near perigee--its point closest to Earth. AO-40 relies on solar panels for its power.

Mills said that testing and development continue on AO-40's three-axis control system, but three-axis control would not be ready in time to avoid the unfavorable solar-angle season. AO-40 will remain in spin mode for at least a few more months, he said.

Mills estimated that ground controllers may need to start shifting the satellite's attitude starting sometime just before Christmas. He didn't expect a favorable sun angle that would again allow pointing AO-40 directly toward Earth (ALON/ALAT 0/0) until mid-April. "It's possible that we can leave the transponders on during the first part of the move and turn them back on slightly before April 15 as we start back toward 0/0," Mills said, "but you can figure that things will be sub-optimal from about Christmas until April 15."

Mills said earlier this month that ground controllers now assume that AO-40's S1 transmitter is beyond recovery. The S1 transmitter quit abruptly in August, but before going down, it had produced excellent results. Ground controllers also have done additional testing on the 2-meter (V band) transmitter, which, Mills conceded, also appears lost.

The next-generation AO-40 satellite marked its first year in orbit during November. The former "Phase 3D" satellite was launched November 16, 2000,

aboard an Ariane 5 launcher from the European Spaceport in Kourou, French Guiana. Transponder operation began May 5, 2001. AO-40 is the largest Amateur Radio satellite ever put into space.

The current AO-40 transponder operating schedule and more information are available via the AMSAT Web site <http://www.amsat.org>.

==>G3AQC'S SIGNAL SPANS THE ATLANTIC ON 73 KHZ!

Low-frequency experimenter Lawrence "Laurie" Mayhead, G3AQC, has added another LF accomplishment to his list--transatlantic reception of his 73 kHz signal. Word of the LF exploit comes just weeks away from the centennial of the historic transatlantic transmission of December 12, 1901, when Guglielmo Marconi, in Newfoundland, received the letter "S" transmitted from England.

Mayhead reports that on the night of November 21-22, his signal on 72.401 kHz was received in the US. "I managed to transmit a full call sign to John Andrews, W1TAG, in Holden, Massachusetts," he said. Mayhead was using dual-frequency CW--or DFCW--featuring elements that are two minutes long, and Andrews detected his signal using ARGO DSP software.

Andrews, who lives in Central Massachusetts, says he first tried to receive G3AQC's 73-kHz transmissions last spring, but got only partial copy. Mayhead resumed beaconing again in late August, and Andrews devoted "quite a number of evenings" to trying to hear him. His patience was rewarded November 20 (UTC), when he reports G3AQC's signal "magically appeared from the noise" and, although very weak, showed up on his computer display. Initially, Mayhead was just sending his call sign suffix--"AQC"--over and over, but the next night he began repeating his full call sign.

"Luck being with us, conditions were absolutely amazing," Andrews said, adding that G3AQC's signal was much clearer than the previous evening. "Figured by grid squares, the distance between G3AQC and W1TAG was 3275 miles (5270 km)," he said. G3AQC and two other UK stations have transmitted since the evening of November 21-22, but no further reception has occurred.

Andrews said he lives in a residential area that's not known for being especially "quiet," so he's puzzled that he's apparently the only US station to hear the 73-kHz transmissions from the UK.

Last February, Mayhead and Larry Kayser, VA3LK, in Ontario, completed a transatlantic Amateur Radio contact on 136 kHz. The UK's 73-kHz band is a 2.8 kHz sliver of spectrum, from 71.6 to 74.4 kHz. The ARRL has petitioned the FCC to create two low-frequency Amateur Radio allocations--at 136 kHz and at 160-190 kHz. FCC action is anticipated in 2002.

==>MARS AGAIN LETTING US TROOPS "PHONE HOME"

US Army Special Forces on duty in Islamabad, Pakistan, and in other undisclosed locations have begun keeping in touch with home via Military Affiliate Radio System--MARS--phone patches. Army Military Affiliate Radio System Headquarters here said that MARS members in all three services--Army, Air Force and Navy-Marine Corps--are gearing up for greatly expanded

phone-patch operations as the holidays approach.

MARS phone patches make it possible for deployed troops to call their families in the US from areas where commercial connections are not available. Specially trained Amateur Radio operators enrolled in MARS provide the connection between military shortwave stations deployed overseas and the telephone system back home. During the Vietnam War, phone patches were a major source of comfort to families and service members alike. MARS responded again during Operation Desert Storm.

Phone-patching has taken on new life over the last several years as Special Forces members were deployed on peacekeeping missions to Kosovo, Macedonia, West Africa and other areas that lack regular or affordable phone service.

"Most of our contacts lasted less than 15 minutes and were to the wives," said a communications sergeant recently returned from a three-month Special Forces mission in Africa. "All the guys wanted to make sure everything was running smoothly in their absence."

Successfully completing a patch gives a big lift to the MARS amateur in the middle, too. "You never know who you will meet on these [high] frequencies," said one East Coast MARS member, who called it "a privilege" to serve as an Army MARS phone-patch operator.

These days, calls from overseas might originate from battery-powered backpack transceivers with a power of 20 W or less, but hams on the US end of the circuit using ordinary Amateur Radio gear and antennas are usually able to make a workable connection. Even the more sophisticated military base stations can experience problems, however. One overseas communicator reported that turning on a linear amplifier tripped the circuit breakers on the local power system.

Amateurs interested in joining MARS should contact their state MARS director or visit the Army MARS <http://www.asc.army.mil/mars/>, the Air Force MARS <http://public.afca.scott.af.mil/public/mars1.htm> or the Navy-Marine Corps MARS <http://navymars.org/> Web site.--thanks to Army MARS and Bill Sexton, N1IN

==>NATIONAL WEATHER SERVICE/ARRL SPECIAL EVENT IS DECEMBER 1

The National Weather Service and ARRL will co-sponsor an on-the-air event to recognize the contribution of SKYWARN volunteers. The NWS/ARRL SKYWARN Recognition Day will be Saturday, December 1, from 0000 to 2400 UTC. This will mark the third year that ARRL and the NWS have co-sponsored an Amateur Radio special event. Some 80 National Weather Service offices are signed up to participate.

During the special event, hams or ham groups will operate from NWS offices and contact other amateurs or amateur groups across the country. Last year more than 23,000 contacts were made from NWS offices. The object is for amateur stations to exchange QSO information with as many National Weather Service special event stations as possible. Stations will transmit call

sign, signal report, location and a one or two word description of the weather at their location--such as sunny, partly cloudy, windy.

The NWS will offer participation certificates and endorsement stickers to amateurs who request them. Requests go to National Weather Service, 920 Armory Rd, Goodland, KS 67735. This year's endorsements includes the Patriot--a special endorsement to honor Amateur Radio volunteers who assisted in the aftermath of the September 11, 2001, attacks at the World Trade Center and the Pentagon.

Full information, operating instructions, a list of participating NWS stations, and certificate and QSL information is available on the NWS/ARRL SKYWARN Recognition Day Web page <http://hamradio.noaa.gov/> or see November QST, page 76.

==>"THE BIG PROJECT" SEEKS LOGO

Now that the Amateur Radio Education Project-- "The Big Project"--is under way, it's looking for a logo. "The theme is using Amateur Radio in education," says The Big Project Coordinator Jerry Hill, KH6HU. "This is your opportunity to show off your creativity." The deadline for entries is December 28, 2001!

All entries should incorporate the ARRL diamond, portray the proper image in both black-and-white and in color, and be the same size as other standard patches, such as ARES--typically 3.5 inches in diameter. Entries should be submitted electronically at a resolution suitable for QST publication (at least 300 dpi when the image is sized at 4x5 inches or larger; see The ARRL Author's Guide , <http://www.arrl.org/qst/aguide/>).

The creator of the logo selected as a permanent symbol for The Big Project will receive a handsome wall certificate, and the winner's name will be announced in QST, in The ARRL Letter and on the ARRL Web site. Remember, the deadline for entries is December 28. E-mail entries to The Big Project Coordinator Jerry Hill, KH6HU <kh6hu@...>. (Resubmit your entry if it's not acknowledged within two business days.)

==>PROFESSIONAL MEDIA AWARD ENTRY DEADLINE NEARS

December 14 is the deadline to submit nominations for the 2001 Bill Leonard, W2SKE, Professional Media Award. The annual ARRL award goes to a professional journalist or group of journalists to recognize outstanding coverage of Amateur Radio in TV, radio, print or multimedia.

Nominations will be reviewed by members of ARRL's Public Relations Committee, and the committee's recommendation will be presented to the ARRL Board of Directors at its January meeting. The winner will receive an engraved plaque and a check for $500.

An avid Amateur Radio enthusiast, Leonard--a former President of CBS News--is remembered for his 1958 Sports Illustrated article "The Battle of the Hams," which focused on the "sport" of DXing. Leonard died in 1994 and was inducted into the Broadcasting and Cable Hall of Fame in 1996.

For more information about the Professional Media Award or to receive an official entry form, contact Media Relations Manager Jennifer Hagy, N1TDY, 860-594-0328; jhagy@....

==>SOLAR UPDATE

Solar maven Tad Cook, K7VVV, Seattle, Washington, reports:

Average daily sunspot numbers were down by nearly 38 points this week over last, but average daily solar flux remained about the same. Flux and sunspot values reached a minimum on Sunday and are now increasing. Projected solar flux for Friday through Monday is 210, 215, 220 and 220.

A large sunspot (9715) with a complex magnetic field is moving to the center of the visible solar disk, with a straight shot at Earth. This may cause some disruptions this weekend, although probably nothing like the severe geomagnetic storm that disrupted HF propagation last weekend. The predicted planetary A index for Friday through Monday is 5, 15, 30 and 15. 30 is quite disturbed, so Sunday may have high absorption of HF signals.

Last weekend Earth was blasted by energy from two coronal mass ejections. The mid-latitude A index on Saturday was 76, and the planetary A index was 108, indicating a severe geomagnetic storm. This caused dramatic aurora displays visible as far south as Arkansas and Texas in the United States. A dramatic gallery of aurora images is available on the SpaceWeather.com Web site <http://spaceweather.com/aurora/gallery_24nov01.html>.

Sunspot numbers for November 15 through 21 were 219, 200, 157, 181, 168, 160 and 132, with a mean of 173.9. The 10.7-cm flux was 207, 202.1, 198.5, 188.2, 191.3, 185 and 184.2, with a mean of 193.8. Estimated planetary A indices were 7, 8, 11, 7, 16, 8 and 6, with a mean of 9.

Sunspot numbers for November 22 through 28 were 143, 144, 124, 102, 122, 139 and 180 with a mean of 136.3. The 10.7-cm flux was 282.5, 177.3, 173, 170, 174.8, 190.4 and 198.5, with a mean of 195.2. Estimated planetary A indices were 8, 12, 108, 8, 5, 2 and 3 with a mean of 20.9.

==>IN BRIEF:

* This weekend on the radio: The TARA RTTY Sprint, the TOPS Activity 80-Meter Contest, the Tennessee QSO Party and the QRP ARCI Holiday Spirits Sprint are the weekend of December 1-2. JUST AHEAD: The ARRL 160-Meter Contest, Six Club First Winter Contest, the PSK31 Death Match are the weekend of December 8-9. The ARRL 10-Meter Contest is the weekend of December 15-16. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Registration opens for ARRL Level III Emergency Comms course: Registration for the ARRL Level III--Advanced Amateur Radio Emergency Communications on-line course (EC-003) opens Monday, December 3, at 4 PM Eastern Time. On-line classes will begin the week of December 10. For those who took the

prerequisite Level I (EC-001) and Level II (EC-002) courses, the Level III course is designed to prepare volunteers for activity in upper level positions. To enroll, visit the ARRL Course Registration page <https://www.arrl.org/forms/cce> after 4 PM Monday. ARRL Course Welcome letters will be sent later in the week after mentors have been assigned to each student. Access codes will follow, so all students can begin. To learn more, visit the ARRL Certification and Continuing Education Continuing Education Web site <http://www.arrl.org/cce> and the CCE links found there, or contact ARRL Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* Amateur Radio Trader calls it quits: Amateur Radio Trader magazine is ceasing publication with its second November issue, which went out to subscribers November 20. "This was a difficult but necessary decision, due to the combined effects of the Internet on our print edition (the primary source of our Web content), and the economic climate," said the magazine's editor Barbara Patterson, KF4MVV, in a statement on the Amateur Radio Trader Web site <http://www.amradiotrader.com>. "ART is no longer a viable product for us. We are redirecting the company's resources into other areas." Patterson told ARRL that the Amateur Radio Trader Web site also would be discontinued and that subscribers would be reimbursed for any outstanding issues. She said TAP Publishing Company, which owns the twice-monthly listing of classified ads, had decided to put its energies into other areas. Patterson apologized for any inconvenience and said the second November issue of ART would remain posted on the ART Web site through December 9.

* ARRL approves Afghanistan operation for DXCC: The ARRL DXCC Desk reports it has received acceptable documentation for YA5T in Afghanistan and has approved it for DXCC credit. Afghanistan is among the top 10 "most wanted" countries. The license, which authorizes operation on all bands--including 6 meters--was issued by the Islamic Republic of Afghanistan government that's still recognized by the United Nations. YA5T will be operated by Peter Casier, ON6TT, as well as by Mats Persson, SM7PKK, Robert Kasca, S53R, and Mark Demeuleneere, ON4WW. All work for the UN World Food Program. YA5T will be on the air as their schedules permit. The DXCC documentation is for contacts made on or after November 20, 2001. No other call signs or operations have been approved. For more information, visit the YA5T Web site managed by Bruce Richards, WD4NGB <http://www.qsl.net/ya5t/>.

* FCC says ULS now compatible with Internet Explorer and Netscape: The FCC has announced that its Universal Licensing System (ULS) now can be accessed using either Internet Explorer 5.5-6.0 or Netscape Navigator 4.5, 4.51, 4.61, 4.7 and 4.75. Until now, the ULS has supported only Netscape. The FCC says applicants may now use Internet Explorer to file applications and for all other ULS purposes. For more information, contact ULS <ulscomm@fcc.gov>. For questions concerning computer access to ULS, CORES registration and FCC Registration Number, TIN/Call Sign issues, or submitting attachments in ULS, contact the Technical Support Hotline, 202-414-1250, available weekdays 7 AM-10 PM, Saturdays, 8 AM-7 PM and Sundays from noon-6 PM Eastern Time. The Public Notice outlining this change is available on the FCC's Web site <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-01-2729A1.doc>.

* Ham-sailor departs Nassau: David Clark, KB6TAM--the oldest person to sail solo around the world--is again under way after a stopover in Nassau, the Bahamas. Clark arrived in Nassau Thanksgiving day on his way to a homecoming celebration in Fort Lauderdale, Florida, December 7. His wife, Lynda, reports that he departed November 27 for Bimini in order to get ahead of Hurricane Olga, now a Category 1 storm. Lynda Clark said her husband was "treated royally" during his Nassau stay.

* John Parrott, W4FRU, SK: Veteran DXer and well-known QSL manager John Parrott, W4FRU, of Suffolk, Virginia, died November 28. He was 79. A native of Memphis, Tennessee, he was first licensed in 1937. An ARRL Life member, Parrott was a director of the International DX Association, a member of the Virginia DX Century Club, Quarter Century Wireless Association, The Society of Wireless Pioneers and the Institute of Electrical and Electronic Engineers. "All we say isn't enough for a friend like John," said INDEXA President Murphy Ratterree, W4WMQ. "He was special to many people." He was a retired US Air Force fighter and transport pilot, and his 32-year flying career spanned World War II, the Korean conflict and Vietnam. Survivors include his wife Amy, KN4NZ, and their daughter and two sons. The Funeral was set for December 1 in Suffolk, and burial will be in Arlington National Cemetery at a later date. Memorial donations are welcome to the American Heart Association or the American Diabetes Association.

* John "Mac" McKinney, W0AP, SK: A well-known member of Nebraska's ham radio community--John "Mac" McKinney, W0AP, of Dannebrog, died November 24. He was 83. A New York native and FCC employee from 1945 until 1975, McKinney last served as chief of the monitoring station in Grand Island. He was an ARRL Life Member, Assistant Midwest Division Director, and manager of the Nebraska CW Net. He also belonged to the Society of Wireless Pioneers, the Morse Telegraph Club, the Old Old Timers Club, and the Quarter Century Wireless Association, and once served as a QCWA board member. Survivors include five daughters. Services were set for November 28 in Dannebrog.

* Sixth District QSL Bureau changing manager, address: The ARRL Sixth District QSL Bureau has changed management and has a new address. Taking over effective December 1, 2001, are Arlette and Chuck Marshall, KO6IS and KD6WP, ARRL Sixth District QSL Bureau, PO Box 530, Weed, CA 96094-0530. For more information, visit the ARRL Sixth District QSL Bureau Web site <http://www.kqlz.com/qslbureau6.html>.

* Southeastern Division Convention is December 1-2: The ARRL Southeastern Division Convention will be held December 1-2 at the Manatee County Civic Center, Palmetto, Florida, in conjunction with the 26th annual Tampa Bay Hamfest. Featured speaker is ARRL President Jim Haynie, W5JBP. ARRL Lab Supervisor Ed Hare, W1RFI, will offer five technical presentations. Amateur Radio examinations will be offered. For more information, visit the Tampa Bay Hamfest Web site, <http://www.fgcarc.org> or e-mail info@....--Paul Knupke, N4PK

* Starshine 3 is now SO 43: AMSAT-NA Board Chairman Bill Tynan, W3XO, has announced that the recently launched Starshine 3 satellite has met all the requirements for an OSCAR number and has been designated Starshine OSCAR 43

(SO-43). Starshine 3 is a mirror ball with AX.25 9600-baud telemetry on 145.825 MHz. The satellite is visible to the eye and will provide students the opportunity to participate in its primary mission of satellite tracking. More information about the Starshine project can be found on the Starshine Web site <http://www.azinet.com/starshine>.--AMSAT News Service

* DXCC credit granted for XU7AAR operation: The ARRL DXCC Desk reports that it has received supporting documentation for the 1999 XU7AAR (Cambodia) operation and has now accepted XU7AAR for DXCC credit. Those who submitted XU7AAR previously and were denied credit may contact DXCC <dxcc@...> and have their records updated without having to resubmit cards.--DXCC Desk

* Badger State Smoke Signals delayed: The January 2002 editions of Wisconsin's Badger State Smoke Signals Amateur Radio newspaper for Wisconsin amateurs will be delayed in delivery due to the ill health of Editor Jim Romelfanger, K9ZZ.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in

the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

M.A.R.S. NewsLetter
Vol 01, No 01
December 07, 2001
****

In this Monthly Edition :
FEATURE :
a.. Digital Mode - PSK 31
PSK31 is the first new digital mode to find popularity on HF bands in many years. It combines the advantages of a simple variable length text code with a narrow bandwidth phase-shift keying (PSK) signal using DSP techniques. This mode is designed for "real time" keyboard operation and at a 31 baud rate is only fast enough to keep up with the typical amateur typist. PSK31 enjoys great popularity on the HF bands today and is presently the standard for live keyboard communications. Most of the ASCII characters are supported.

a.. PSK31 Official Homepage : http://aintel.bi.ehu.es/psk31.html
b.. PSK31 Programs : http://www.dxzone.com/catalog/Software/PSK31/
c.. Favourite PSK31 program (600kb) : http://members.home.net/hteller/digipan/digipan6.exe
d.. Most preferred Multi-mode Software MIXW2 (1088kb) :
http://tav.kiev.ua/~nick/mixw2/MixW2rc6.exe
This program supports CW, BPSK31, QPSK31, MFSK, RTTY, FSK31, Packet (HF and VHF), Pactor RX/TX (TX requires TNC), Amtor (Sitor) TX/RX (No TNC needed), Hellschreiber, FAX (RX only), SSTV, and THROB.

a.. The Amateur's Code
The Radio Amateur is :
CONSIDERATE....never knowingly operates in such a way as to lessen the pleasure of others.
LOYAL....offers loyalty, encouragement and support to other amateurs, local clubs through which Amateur Radio is represented nationally and internationally.
PROGRESSIVE....with knowledge abreast of science, a well-built and efficient station and operation above reproach.
FRIENDLY....slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance, cooperation and consideration for the interest of others. These are the hallmarks of the amateur spirit.
BALANCED....radio is an avocation, never interfering with duties owed to family, job, school or community.

PATRIOTIC....station and skill always ready for service to country and community.
-- The original Amateur's Code was written by Paul M.Segal, W9EEA, in 1928.

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

Brihan Mumbai Muncipal Corporation conducted a Table Top Exercise on Disaster Management for Mumbai on 10th December 2001.

About 35 people were invited to participate in the exercise from Govt Organisations & Non Govt Organisations such as
The Municipal Commissioner, The Police Commissioner , The Chief Officer of Fire Bridgade, Air Force Commander, Navy Commander, Chief officers from VSNL/ MTNL ,Additional Controller of Civil Defense and other important officers from the CM's office.

The NGOs consisted of very few organisations such as AGNI & CARE INDIA, and some media personals. The Guest were Dr. Friedmann Wenzel from German Committee for Disaster Reduction., Ms.Yuriko Tsunehiro from United Nations, Mr. Shaw from
New York Fire Department. The exercise was conducted by Dr. Ravi Sinha for IIT Mumbai accompanied by Dr. Subramaniam for IIT Mumbai.

MARS was represented by Nilesh VU2NLF, (MARS is the only NGO included in the Group of Emergency Services). The workshop went quite well as all the participents gave their inputs and discussed their roles in the Disaster Management Plan.

HAM RADIO was given a lot of importance for providing communications support in case of disasters , inspite of VSNL & MTNL giving their assurance they have enough backup services in case of a disaster. Especially Mumbai Fire Brigade which has shown a very keen interest to tie up with us and working some simulated exercises in the near future.

The BMC also plans to conduct Table Top Workshops as well as Simulated exercises every 2 months. MARS is requested to participate in all these exercises.

Topic: 404 Message: 404

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

I have informed you all about the Mumbai Disaster Management Plan, Ham Radio is likely to play an important role in case of real disaster. MARS has a very competent Team for Disaster Management, But the Team is trained for HF communications from remote locations, Disaster in Mumbai (God Forbid) would be totally a whole new Ball Game.

We would require an excellent VHF & UHF network and lots of hams to deal with the problems. In such case I am sure almost all the members having the VHF or UHF capability can partcipate for this noble cause.

There are about 20 BMC Wards in Mumbai [A -T] , we need to have atleast one of our Ham Representative for all these wards, who in case of emergency can coordinate with their local ward officers and vice versa.

Our VHF repeater is also likely to be up by this weekend, Nerverthe less we would still require hams as relay stations working from their areas, we would also require Hams who can be mobile for survery and reports.

I therefore request all the members to opt for this emergency service and offer their assistance depending upon their capability
members interested must send me the following details as under :-

1. Your BMC Ward.
2. VHF/ UHF equipment.
3. Antennas
4. Choice to work from House / Field.
5. Suggestions.

A VHF simulated exercise will be conducted (just Hams) very shortly to evaluate for our coverage and to test the foot prints of our repeater.

==>NEW YORK HAM WINS ANTENNA LAWSUIT

In one of the most favorable PRB-1 court rulings in years, a New York
amateur has won a three-year battle to erect a tower on his property. The US
District Court for the Northern District of New York has ordered the
Saratoga Springs Planning Board to grant Randall J. Palmer, N2NVH, a special
use permit for a 44-foot antenna support structure. PRB-1 is the limited
federal pre-emption that requires localities to reasonably accommodate
Amateur Radio communication.

In a 20-page decision issued December 3, US District Judge Norman A. Mordue
found that "the planning board did not attempt to negotiate a satisfactory
compromise" with Palmer. As a result, Mordue, said, the town failed to
reasonably accommodate Palmer's amateur communication needs pursuant to
PRB-1. The judge found that "the planning board engaged Palmer in a strictly
```

one-sided negotiation consisting of inflexible demands and the construction of hoop after hoop for Palmer to jump through."

Mordue found that the record "clearly proves" the planning board made no attempt to negotiate a satisfactory compromise. On the other hand, the judge asserted, Palmer complied with many of the planning board's numerous requests and even made concessions on his own initiative. Mordue said that since the town already understood its obligations under PRB-1, he was directing the planning board to immediately grant Palmer's application. It's not known if the town will appeal.

ARRL Volunteer Counsel Albert J. Millus, WB2EQR, represented Palmer through much of the battle. "I'm a ham radio operator myself, and these are important cases for hams," Millus told the Associated Press December 4.

Saratoga Springs limits all antennas to 20 feet in height and allows exceptions only upon issuance of a special use permit. Palmer applied for one in 1999 to erect a modest antenna system of less than 50 feet in height, but the town continued to deny his permit application.

After the last rejection earlier this year, Palmer went forward with his lawsuit, filed after the town's initial denial of his application. A bench trial was held October 30. Mordue's decision relied on an analysis of prior antenna cases, including the landmark Pentel v. Mendota Heights case--issued by the Eighth Circuit in 1994.

ARRL Hudson Division Director Frank Fallon, N2FF, continues to spearhead a legislative effort to codify PRB-1 into New York state law. Fallon said he hoped the decision in the Palmer case--coupled with the goodwill generated by amateur response to the September 11 World Trade Center attacks--would prompt the New York Assembly to act favorably on the PRB-1 bill when the legislature goes back into session December 17.

==>TAKE A NUMBER: FRN NOW MANDATORY

Anyone filing an Amateur Radio application now will be asked to supply a 10-digit FCC Registration Number (FRN) issued by the FCC's new Commission Registration System, or CORES. The requirement applies to FCC applications filed on-line or on paper. The FCC also has supplanted Universal Licensing System (ULS) registration with "CORES/Call Sign" registration, so applicants no longer need to register separately in both systems.

Most, if not all, hams who registered previously with the ULS already have an FRN, although they may not know it yet. The FCC just completed another cross-registration to include those already on the ULS books within the CORES "entity registration" database, and another is scheduled. Amateurs can learn their FRNs by doing a license search on the FCC's Universal Licensing System page <http://wireless.fcc.gov/uls/>. FRNs also are displayed via the ARRL call sign server on ARRLWeb <http://www.arrl.org>.

The FCC has updated its ULS page <http://wireless.fcc.gov/uls/> to reflect the new reality and to make the page a bit less confusing. Amateurs not yet

registered in CORES who click "CORES/Call Sign" registration will be redirected to the CORES site to complete that process. Amateurs who click "Online Filing" are advised to proceed to CORES to register if they do not already have an FRN, then return to ULS for filing.

Those filing on-line applications now are asked to supply either an FRN or a Taxpayer Identification Number (TIN--a Social Security Number for an individual) plus a password, typically the same for both CORES and ULS.

The process is a bit more daunting for new club station applicants, who now will be asked to register in CORES as business entities. Such applicants also may file with a Club Station Call Sign Administrator using Form NCVEC 605 and simply leave the FRN field blank. ARRL VEC Manager Bart Jahnke, W9JJ, says that in those cases, the Club Station Call Sign Administrator (CSCSA), such as ARRL, will register the club station entity in CORES on the applicant's behalf.

The FCC also now only accept FCC Form 159 (Remittance Advice) dated February 2000 or later, which requires providing an FRN. A copy of the acceptable version is available on the FCC Web site <http://www.fcc.gov/fees>. At the left side of the page, click on "Form 159".

For more information about the Commission Registration System or on obtaining an FRN, contact the CORES Help Desk, 877-480-3201, cores@....

==>HAM RADIO CONNECTS SOUTH CAROLINA, GEORGIA YOUNGSTERS WITH SPACE STATION

Youngsters visiting the South Carolina State Museum in Columbia and attending the Atlanta New Century School in Georgia recently spoke via ham radio with the International Space Station. The contacts were the latest in a string of successful radio conversations between school-age youngsters and Expedition 3 Crew Commander Frank Culbertson, KD5OPQ. They were arranged as part of the Amateur Radio on the International Space Station (ARISS) program.

On Friday, November 30, 13 youngsters in grades 4 through 11 visiting the South Carolina State Museum quizzed Culbertson, who operated as NA1SS from aboard the ISS. Culbertson generated some news during the contact when he revealed that NASA had scheduled a space walk by two of the crew members to clear up a Progress rocket docking problem. The faulty docking had been holding up the launch of the Expedition 4 crew on the space shuttle.

Some 100 youngsters were on hand at "Earth Station South Carolina" for the occasion. One fifth grader wanted to know whether Culbertson had ever seen life in space. "Just the guys I live with up here," Culbertson quipped. "I haven't seen any other kind of life outside the space station." His remark drew laughter from the earthbound audience. "Who knows whether there is or not," he continued in a more serious vein. "If there is, it's a pretty big deal and would be very important. If there's not, then it makes our place in the universe even more important and gives us more responsibility to take care of what we have."

Culbertson told the youngsters that he was floating "halfway between the ceiling and the floor" as he was talking to them. "Zero G is fun," he said, referring to the weightless environment, "however, there are hazards." Although there's no artificial gravity aboard the space station, Culbertson said he sometimes he wished there were.

Culbertson spoke Wednesday, December 5, with youngsters at the Atlanta New Century School. First up was a first grader who wanted to know how "the fire makes the ship fly." Culbertson explained that the "fire" was really a mixture of exhaust gases forcefully exiting the rocket "really, really fast" and that the reaction to that force made the rocket move in the opposite direction. He told the next questioner that liquid hydrogen and liquid oxygen were the primary shuttle fuels--a half million gallons in all.

Another student prompted guffaws from his classmates when he asked how much Culbertson earned. The pay scale for his job as an astronaut is the same as for an average aerospace engineer, Culbertson told the youngster--from about $50,000 to more than $90,000 a year.

About a dozen questions were asked and answered during contact with Atlanta New Century School. Culbertson's sister, Amy, was among those in the audience at Atlanta. "Tell my sister Amy hello for me," Culbertson said, but the two did not converse.

Nancy Richeleau, WH6PN, and Dick Flagg, AH6NM, operating from The Sacred Hearts Academy club station in Honolulu, served as the control operators for the South Carolina contact. Tony Hutchison, VK5ZAI, in South Australia handled Earth station duties for the Atlanta contact. Two-way audio was handled by WorldCom teleconferencing facilities.

Culbertson, who's logged nearly two dozen ARISS school contacts during his ISS stay, is looking forward to returning to Earth in time to join his family for the holidays. The current crew has been aboard the ISS since August. The shuttle Endeavour carrying the Expedition 4 crew of Commander Yuri Onufrienko and Flight Engineers Dan Bursch, KD5PNU, and Carl Walz, KC5TIE, blasted into space December 5. The shuttle also is carrying some new ham radio antennas for the ISS.

==>FCC CHASTISES FEUDING 75-METER OCCUPANTS

The FCC's Enforcement Bureau recently stepped in to halt feuding over the use of some 75-meter frequencies. The dispute had pitted the Alabama Traffic Net, the Alabama SKYWARN Net and the Country Cousins Net against an informal group of amateurs. All wanted to operate between 3.965 and 3.970 MHz. In the end, the FCC declined to take any enforcement action in the situation, but Special Counsel for Amateur Radio Enforcement Riley Hollingsworth took all sides to task for bringing their charges and countercharges to the FCC in the first place.

"This dispute appears to be largely a 'who's on first' dispute, involving issues of proper operating procedures, and not appropriate for enforcement action," Hollingsworth told the parties involved.

In a two-page response sent to Jeremy Jackson, K9CNI, Henry Willmon, WA4GQS, Sal Viglione, W4SAL, and Alabama ARRL Section Manager Bill Cleveland, KR4TZ, Hollingsworth recounted allegations of deliberate and retaliatory interference, verbal harassment, frequency hogging, obscenity and profanity and even a charge that one individual was selling illegal linear amplifiers.

Hollingsworth pointed out that nets--regardless of their longevity, membership numbers or public service benefit--are not specifically regulated by FCC rules and have no greater rights to any frequency than any other licensee. On the other hand, the informal group, Hollingsworth said, needs to consider whether it's good amateur practice to deliberately start communications on a frequency widely known to be used by a long-established net.

Hollingsworth put those involved on notice that anyone violating the rules was risking FCC enforcement action and possible fines. "We cannot, however, mandate courtesy, good and fair operating practices or even common sense," he added.

Hollingsworth says the informal group has told him it would find another frequency to meet on 75 meters.

==>NEW AMATEUR EXTRA CLASS QUESTION POOL RELEASED

The National Conference of Volunteer Examiner Coordinators' Question Pool Committee has released a revised and expanded Amateur Extra class (Element 4) question pool into the public domain. The new question pool becomes effective July 1, 2002, and must be used to generate all Extra class written examinations administered on or after that date. It replaces the Extra class question pool released April 15, 2000--the day Amateur Radio "restructuring" became effective.

The new Element 4 pool expands the number of questions by more than 20 percent--806 questions--as opposed to 665 in the current Extra class pool, and it contains more technical material. More than half of the questions cover electrical principles, circuits, signals and emissions.

The 50 questions in an Extra class examination are drawn from the question pool consistent with FCC rules and according to a formula that specifies the number of questions to be asked from each of nine topic areas. Applicants must correctly answer at least 37 questions to pass.

The new Element 4 question pool is available on the ARRL Web site <http://www.arrl.org/arrlvec/pools.html>. The just-released Extra class question pool remains valid through June 30, 2005.

The Question Pool Committee now will turn its attention to developing an outline for the Technician class (Element 2) question pool. A draft Element 2 syllabus is scheduled for public release and comment next spring. The QPC invites suggestions for the Element 2 syllabus and question pool revision.

Questions and comments about the QPC's work can be directed to, Chairman Scotty Neustadter, W4WW, w4ww@...; ARRL VEC Manager Bart Jahnke, W9JJ, vec@...; Fred Maia, W5YI, w5yi@...; and John Johnston, W3BE,

johnston.john1@...

==>THREE SECTION MANAGERS APPOINTED TO FILL VACANCIES

ARRL Field and Educational Services Manager Rosalie White, K1STO, has named three new ARRL section managers to fill vacancies in the field organization. New section managers were appointed in the Alaska, Georgia and San Diego sections.

In Alaska, David Stevens, KL7EB, of Anchorage, will succeed L. Kent Petty, KL5T. Petty last month withstood a challenge from Stevens for the SM slot, 154 to 104, but has decided to step aside. Stevens previously served as SM from July 1998 until December 1999. He's an ARRL Life Member and an Extra class licensee. He's also served as a Affiliated Club Coordinator and an Official Observer.

In Georgia, Susan Swiderski, AF4FO, of Norcross will replace Sandy Donahue, W4RU, the SM since 1997, who was recently elected Southeastern Division Vice Director. An Extra class licensee, Swiderski has been active in the ARRL field organization and has served as an Affiliated Club Coordinator.

In the San Diego Section, Kent Tiburski, K6FQ, of San Diego will step into the post now held by Tuck Miller, NZ6T, who was just elected ARRL Southwestern Division Vice Director. Miller has served as SM since April 1998. Tiburski has served as an Assistant Section Manager, District Emergency Coordinator and Technical Coordinator for the section.

Terms of office for Stevens, Swiderski and Tiburski begin January 1, 2002.

==>ARRL ISSUES QRP DXCC PROGRAM RULES

The ARRL has issued rules <http://www.arrl.org/awards/dxcc/qrp/qrp-dxcc-rules.html> for its new QRP DXCC Award. Applications will be accepted starting January 2, 2002.

The ARRL Board of Directors approved the new QRP DXCC Award at its July 2001 meeting. The QRP DXCC Award is given for working 100 different "entities" (formerly "countries") on The DXCC List while operating with an output power of 5 W or less. Standard DXCC rules <http://www.arrl.org/awards/dxcc/> also apply to this new award. Contacts made since November 15, 1945, are acceptable.

The award is available to Amateur Radio operators worldwide. Applicants must submit an alphanumeric list of 100 contacts--sorted by call sign prefixes. Application forms and additional information are available on the ARRL Web site <http://www.arrl.org/awards/dxcc/qrp/index.html>, via e-mail to dxcc@..., fax 860-594-0259, or mail to ARRL DXCC, 225 Main St, Newington, CT 06111.

==>SOLAR UPDATE

Propagation prognosticator Tad Cook, K7VVV, Seattle, Washington, reports: This has been a quiet week with no geomagnetic disturbances. Each day's

planetary A indices have been in the single digits, indicating stable conditions without the high absorption of HF radio signals associated with solar coronal holes and flares.

Average sunspot numbers were up more than 84 points, and average solar flux rose by nearly 49 points. Solar flux has probably peaked for the short term in the past few days.

For this weekend, Friday through Monday, solar flux is predicted at 225, 225, 220 and 210. Planetary A indices are expected at 8, 8, 15 and 15. The rising A index is possible because of sunspot 9727, currently moving toward the center of the visible solar disk with a complex magnetic field harboring the possibility for solar flares. Conditions should be good for the 160-meter event, barring any geomagnetic upset.

Average daily solar flux values for November were up slightly from the previous month, and were a fairly high monthly value for the year. Average daily solar flux for January through November was 166.6, 147.2, 177.7, 178.2, 148.7, 173.7, 131.3, 163.1, 233.8, 208.1 and 212.7.

Holographic images of the sun's far side show no substantial sunspots. Barring any emerging activity, the next short term minimum in solar flux is expected from December 16-20. Recently, 6-meter operators have been working a great deal of DX via F2 layer propagation.

Sunspot numbers for November 29 through December 5 were 204, 158, 208, 271, 230, 214 and 260, with a mean of 220.7. The 10.7-cm flux was 216.4, 225.8, 221.3, 245, 235, 233.3 and 237, with a mean of 230.5. Estimated planetary A indices were 3, 3, 7, 4, 7, 6 and 8, with a mean of 5.4.

==>IN BRIEF:

* This weekend on the radio: The ARRL 160-Meter Contest, Six Club First Winter Contest, the PSK31 Death Match are the weekend of December 8-9. JUST AHEAD: The ARRL 10-Meter Contest is the weekend of December 15-16. See the ARRL Contest Branch page, <http://www.arrl.org/contests/> and <http://www.hornucopia.com/contestcal/weeklycont.html> for more info.

* "DX window" remains for ARRL 160 Meter Contest: Although the "DX window" no longer is a part of the ARRL 160-meter band plan, there will be a DX window for the ARRL 160 Meter Contest, which runs December 7-9. The contest's rules <http://www.arrl.org/contests/announcements/rules-160m.html> still require that the segment 1.830 to 1.835 MHz be used only for intercontinental QSOs. The contest is a CW-only event. The revised band plan, which is considered an operating guideline, recommends that SSB, SSTV and other wideband modes stay at or above 1.843 MHz. It also establishes a QRP calling frequency is 1.810. In doing away with the DX window last July, the ARRL Board of Directors adopted the recommendations of the ad hoc 160 Meter Committee, which said the DX window concept was not followed and was impractical. The change left it up to contest sponsors to establish DX windows as necessary during their events.

* Amateur Radio Emergency Communications Course December registration: Due to the holiday season, on-line registration will be handled a bit differently during December. Seats remain available for the Amateur Radio Emergency Communications on-line Level III class that opened December 3. Registration for the Level I class opens Monday, December 10, and registration for the Level II class opens the following Monday, December 17. To register, visit the ARRL Course Registration Page <https://www.arrl.org/forms/cce/> after 4 PM Eastern Time on the opening day of registration for the course you wish to enroll in. Registration will remain open until all seats are filled. Starting in January 2002, registration for Level I will open on the first Monday; registration for Level II will open on the second Monday; and registration for Level III will open on the third Monday. Courses must be completed in order, starting with Level I. To learn more, Visit the ARRL Certification and Continuing Education Web page <http://www.arrl.org/cce> and the C-CE Links found there. For more information, contact Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@arrl.org.

* FCC offers Internet Explorer fix for on-line filing problems: The FCC announced recently that it now supports Microsoft Internet Explorer as well as most later versions of Netscape for filing applications via the FCC's Universal Licensing System (ULS). Some amateurs using Internet Explorer have reported problems filing on-line, however, and the FCC says those users may need to run a Java Applet IE plug-in to correct the problem. It's available from the FCC at <https://wtbjag1w.fcc.gov/ieplugin/j2re-1_3_0_02-win.exe> When a "File Download" dialog box appears, click on "Run" or "Open" (depending on your version of IE), and the plug-in will download and install automatically. If a "Security Warning" box appears, click "Yes." Amateurs also must now supply a 10-digit Commission Registration System-issued FCC Registration Number (FRN) when filing FCC applications on-line or on paper. For help initiating an on-line filing using Internet Explorer, contact FCC Tech Support, weekdays, for assistance, ulscomm@... or 202-414-1250.

* Historic coast radio station to celebrate Marconi event: Stations KPH and K6KPH will be on the air December 12, 2001, to help celebrate the 100th anniversary of the first wireless signal to cross the Atlantic, received by Guglielmo Marconi on December 12, 1901, at Saint John's, Newfoundland. Both stations will use the original transmitters, receivers and antennas of KPH, a former RCA coast station. K6KPH, the Maritime Radio Historical Society club station, will be active on amateur frequencies 3545, 7050 and 14,050 kHz. K6KPH will begin operation at 1700 UTC. KPH will be active on commercial frequencies 500 and 426 kHz. KPH will begin operations at 0000 (December 13) UTC. "Commercial practices and procedures will be used on all frequencies to give amateurs the experience of working a real coast station," said K6KPH Chief Operator Dick Dillman, W6AWO.Reception reports or QSLs go to Dick Dillman, W6AWO, 435 Utah St No. 4, San Francisco, CA 94110. KPH reception reports go to Tom Horsfall, WA6OPE, 1862 Tulare Ave, Richmond, CA 94805. More information is available on the Maritime Radio Historical Society Web site <http://www.radiomarine.org>.

* Newfoundland special event to mark centenary of transatlantic reception: The Society of Newfoundland Radio Amateurs will operate special event

station VO1S during the month of December. The special event will mark the 100th anniversary of the reception of the first transatlantic radio signal--the Morse code letter "s"--received by Marconi at Signal Hill in Newfoundland on December 12, 1901. Marconi used a kite-supported antenna to hear the signal, which was transmitted from his station in Poldhu, Cornwall, England. QSL VO1S via the bureau or direct (before March 1, 2002), to SONRA, PO Box 23099, St John's, NF A1B 479, Canada.

* Special event station W1AA/CC to commemorate Marconi's transatlantic feat: The Marconi Radio Club and The Falmouth Amateur Radio Association will celebrate the 100th anniversary of Marconi's December 12, 1901, one-way transatlantic radio transmission with a special event station--W1AA/CC--from December 11-16. Operation will be on 80 through 6 meters, SSB and CW. The public is invited December 12, from 9 AM to 5 PM Eastern Time, when--weather permitting--W1AA will fly a kite antenna and attempt to communicate from Coast Guard Beach, Eastham, Cape Cod, Massachusetts, to clubs at the historic Marconi stations in Poldhu, England and Saint John's, Newfoundland. Marconi used a kite antenna at his 1901 receiving site in Newfoundland. W1AA will transmit on 14.052 MHz. Amateurs at these locations also will attempt to fly kite antennas. QSL via the bureau or to W1AA, Box 1193, Lakeville, MA 02347 and include an SASE. For more information on this and other commemorative events, contact Marconi Radio Club President Whitey Doherty, K1VV, k1vv@...m, or visit the W1AA Web site <http://personal.tmlp.com/k1vv/w1aa/> or The Falmouth Amateur Radio Association Web site <http://www.falara.org/OpEvents/Marconi/fara-marconi.html>.

* Vote on QST Cover Plaque Award: The winner of the QST Cover Plaque Award for November was Paul Shuch, N6TX, for his article "A Moonbounce Odyssey." Congratulations, Paul! The winner of the QST Cover Plaque award--given to the author of the best article in each issue--is determined by a vote of ARRL members. Voting takes place each month on the Cover Plaque Poll Web page, <http://www.arrl.org/members-only/qstvote.html>. As soon as your copy arrives, cast a ballot for your favorite article in the December issue of QST. Voting ends December 31.

* Anthrax scare impacting outgoing DX QSL volume: With one month to go in 2001, ARRL Outgoing QSL Service Manager Martin Cook, N1FOC, reports that his bureau has handled 1,716,940 cards from January 1 through November 30 of this year. That's 54,960 cards ahead of the same date last year. "However, the volume of cards coming in for processing has slowed drastically since the recent anthrax scare," Cook said. "I was hoping to make the 2 million mark this year, but it's not looking good. We will be lucky to beat last year's total." The more than 1.7 million figure so far in 2001 includes cards going to US incoming QSL bureaus and cards sorted and mailed by contractor. The Outgoing QSL Service handled 1,868,895 cards during 2000.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Dear Nilesh,

Great. Congratulation. Continue the good work. You can count on me 24 hours of the day, 7 days of the week and 365 days of any year for disaster management any where in India.

What is a "Table Top Exercise?"

Kailash, VU2KIZ

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

I have informed you all about the Mumbai Disaster Management Plan, Ham Radio is likely to play an important role in case of real disaster. MARS has a very competent Team for Disaster Management, But the Team is trained for HF communications from remote locations, Disaster in Mumbai (God Forbid) would be totally a whole new Ball Game.

We would require an excellent VHF & UHF network and lots of hams to deal with the problems. In such case I am sure almost all the members having the VHF or UHF capability can partcipate for this noble cause.

There are about 20 BMC Wards in Mumbai [A -T] , we need to have atleast one of our Ham Representative for all these wards, who in case of emergency can coordinate with their local ward officers and vice versa.

Our VHF repeater is also likely to be up by this weekend, Nerverthe less we would still require hams as relay stations working from their areas, we would also require Hams who can be mobile for survery and reports.

I therefore request all the members to opt for this emergency service and offer their assistance depending upon their capability
members interested must send me the following details as under :-

1. Your BMC Ward.
2. VHF/ UHF equipment.
3. Antennas
4. Choice to work from House / Field.
5. Suggestions.

A VHF simulated exercise will be conducted (just Hams) very shortly to evaluate for our coverage and to test the foot prints of our repeater.

Subject: [m_a_r_s] Disaster Management Plan for Mumbai.

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

Brihan Mumbai Muncipal Corporation conducted a Table Top Exercise on Disaster Management for Mumbai on 10th December 2001.

About 35 people were invited to participate in the exercise from Govt Organisations & Non Govt Organisations such as
The Municipal Commissioner, The Police Commissioner , The Chief Officer of Fire Bridgade, Air Force Commander, Navy Commander, Chief officers from VSNL/ MTNL ,Additional Controller of Civil Defense and other important officers from the CM's office.

The NGOs consisted of very few organisations such as AGNI & CARE INDIA, and some media personals. The Guest were Dr. Friedmann Wenzel from German Committee for Disaster Reduction., Ms.Yuriko Tsunehiro from United Nations, Mr. Shaw from
New York Fire Department. The exercise was conducted by Dr. Ravi Sinha for IIT Mumbai accompanied by Dr. Subramaniam for IIT Mumbai.

MARS was represented by Nilesh VU2NLF, (MARS is the only NGO included in the Group of Emergency Services). The workshop went quite well as all the participents gave their inputs and discussed their roles in the Disaster Management Plan.

HAM RADIO was given a lot of importance for providing communications support in case of disasters , inspite of VSNL & MTNL giving their assurance they have enough backup services in case of a disaster. Especially Mumbai Fire Brigade which has shown a very keen interest to tie up with us and working some simulated exercises in the near future.

The BMC also plans to conduct Table Top Workshops as well as Simulated exercises every 2 months. MARS is requested to participate in all these exercises.

Hi Nilesh - would like to lend a hand here. But is navi mumbai included?

Requested informaion :

>1. Your BMC Ward. Would be NMMC ward - to be confirmed
>2. VHF/ UHF equipment. IC2N
>3. Antennas 5/8
>4. Choice to work from House / Field. Either
>5. Suggestions. -

Regards
Madhu

Hi zyros - Would love to participate in the event. But do I need any
specialized equipment? I have just my IC2N with quarter wave antenna.
Let me know if its ok
cheers!

Subject: [m_a_r_s] DFE for Fox Hunt

MUMBAI AMATEUR RADIO SOCIETY

Members interested in participating fox hunt are requested to get in touch with ZRS at the earliest, We will require a lot of DFE (Directional Finding Equipment) for all Participents and it gonna take time for home brewing it.

So do not delay and get in touch with ZRS and make the Event successful.

You might be a HAM if.....
Richard Fitzgerald (W5RDF) (http://www.eham.net/user/profile/W5RDF)on December 12, 2001
View comments about this article! (http://www.eham.net/articles/2875#comments)

My apologies to Jeff Foxworthy, but it occurred to me that as a ham we have a lot of traits that link us together.

So here is my own list of things that you can relate to; or you may know someone that really fits the title of a HAM.

You might be a HAM if.....

-
You know the Latitude and Longitude of your home QTH.

-
You ask for a Bird 43 for a Father's day gift.

-
You receive a Bird 43 for a Father's day gift.

-
You calculate the HAAT for your new QTH before you sign the loan papers.

-
Your teenager refuses to ride in your car because it looks like a porcupine

-
Your XYL refuses to ride in your car because all the radios give her a headache.

-
You ever replaced a perfectly good car battery just to get a higher capacity one.

-
Your criterion for a new QTH includes ground elevation, and no antenna restrictions.

-
You ever received a TVI complaint.

-
Your neighbor threatened to call the FCC for you interfering with an electronic device in their house.

-
You ever had an antenna fall down.

-
You ever had the same roll of coax up at 3 different locations.

-
Your XYL accuses you of moving all those boxes of wire for the last 20 years, but never using any of it.

-
You wear a watch that displays time in a 24-hour format.

-
The local Radio Shack knows you by name.

-
You consider an ARRL repeater directory a necessary glove box item.

-
You ever took a detour just to look at a new tower that has sprung up.

-
You use your ham call as a computer password.

-
You ever used your ham call as a part of an email address.

-
You ever bought a ham study guide for another family member in hopes of getting them interested.

-
You plan your vacation to take in as many hamfests as possible.

-
You ever tapped out HI in Morse on your car horn to another ham.

-
You ever took a spring vacation to Ohio, so you could drop in on Dayton.

-
You go to an antique flea market with the XYL, just so she would feel guilty when you wanted to go the ham flea market.

-
Your call sign shows up on your business cards.

-
You ever put a GPS tracker in the XYL's car, just so you could watch her on APRS.

-
You and the XYL took a cruise so you could visit the radio room.

-
Ham radio magazines comprise more than 50% of your bathroom library.

-
A ham radio activity is included in your business resume.

-
You factor in a few extra hours on a business trip so you can visit a ham radio retail establishment

-
You ever fell off a ladder while putting up an antenna.

-
You ever put up an antenna in a snow storm.

-
You ever had to patch your roof after an antenna project

-
Your teenager thinks all your friends are weird.

-
You have many other interests, but over the years keep ham radio as a core activity.

And, you might be a HAM if.....

You can add at least five other items to this list!

73!
Richard Fitzgerald W5RDF

You have ever taken radios and control heads with you while car shopping to make sure everything fit before you made a purchase.

You continue to drive that old 70s or 80s land barge - It's ugly and guzzles gas, but there are plenty of good antenna locations, and a real metal bumper for the HF antenna

You have ever bought a present for the XYL on the way back from a hamfest - something to keep her distracted while you sneak that new rig into the house. Once it's in the shack, she'll never notice it.

You've spent an evening trying to explain to your wife all the neat stuff that the new hand held you want does so much better than the one you bought just last year.

You and a ham buddy buy new rigs, but make the purchase with each other's credit card. That way, when your XYL asks about the mysterious line item on the billing statement, you can just say, " Oh, that's Joe's. He just didn't have his wallet with him when we went to the ham store last time"

73, Dirk W9QA

You start a small 'ham related' business and the equipment & parts flow is large enough the XYL can not tell what you own or not. This frees up the hobby to the point you can do what you wish and throwing a couple of hundred her way once in a while puts 'a rivet on it.'

Your watch is set only to UTC.

Your license plate on your car is your Ham Call Sign.

You watch for clearance measurement signs on bridges and overheads while driving to make sure your antenna is safe.

Have you forgotten the females that MUST explain their hobby to their hubbies!

1. We ARE looking for a new QTH, and yes, the RE agent is also a Ham! So, therefore, will have good elevation, good trees, and "the perfect spot." With no cc & r problems!

2. My children refuse to ride in or drive my van, because it has that "tail" on the back end. They're still waiting on that "cool suv" that I have been wanting.

3. My hubby refuses to allow me to have the radio on because it makes his headaches worse.

4. HamFest? Just another name for flea market (hubby DOES enjoy going to those!)

5. Friends? (my kids can identify them by call)

6. Fox Hunts. Get teenagers involved. You will have a wild time. And they know some spots YOU don't know about.

7. Towers? Okay, my kids spot a new one-and then tell me about it so I can check it out. Oh, and my oldest child is now tower climbing for a living-oh well..HI

8. Don't forget...the following: "mom's wierd hobby"

I must admit that without the care and support (especially when learning CW) of my family, I don't think I would have made it. (okay, the disclaimer was said!)

73,
Julie

...If you introduce your wife as -mywife@...-.
...If you have used coat hangers and duct tape for something other than hanging coats and taping ducts.
...If you window shop at Ham Radio Outlet.
...If your ideal evening consists of flipping through the latest QST mag looking for technical inaccuracies.
...if you spend more time on the internet ICQ than you do on the ham bands.
...If you like to run new software programs before reading the manual.
...If you thought the concoction ET used to phone home with was stupid.
...If your HT has more computing power than your PC.
...If you have ever saved the power cord from a broken appliance.
...if you are old enough to know what an 807 is.
...If the salespeople at Circuit City can't answer any of your questions.
...If you have a habit of destroying things in order to see how they work.
...If the microphone or visual aids at a meeting don't work and you rush up to the front to fix it.
...If you have more friends on the 20 meter band than in real life.
...If you've ever tried to repair a $5.00 radio.
...If your favorite part of the 6 o'clock news is comparing their latest satellite weather picture with yours.

You might be a ham if... You have more wire up and coax cable run than the electric company, the cable company, and the telephone company combined...

...When you pick up the phone and say "QRZ?" instead of hello.

...When you tell a joke in person and end it with "HI HI"!

...When your end your telephone conversation with your callsign and "73"...

...When you start evaluating any and all high structures as potential antenna supports.

... When you start carrying your HT with you everywhere, even into the bathroom...

...When you have QST's in your bathroom. You've gone too far if you have an HF radio in there...

...When your baby's first words are; "CQ"!

...If the sun started to go supernova, a true ham's first thoughts would be; "I hope that this doesn't have an adverse affect on propagation..."

...When you sign your callsign instead of your name.

...When you can remember any callsign, and most any prefix, but can't remember the names of the operators you've worked.

...When you start giving out RST reports when you are on the telephone.

...When the propagation forcast means far more to you than the local weather forcast.

...When you start evaluating any and all high structures as potential antenna supports.

Wow, 22 out of 35 from the original list fit me!

73 Clinton AB7RG

I accept your challenge. Please send a copy of your book when you put these all together...hi hi hi.

{TKS... Quite a Chuckle.}

1.) You tap SK on your car horn as your leaving a driveway of a fellow HAM.

2.) You have a blank QSL card with your call taped under the name plate on your office door or in your cubical.

3.) You have at least one picture of you shack in your office or cube.

4.) Your toddler thinks it's strange that everyone else's car doesn't have as many antennas as Daddy's/Mommy's.

5.) You talk to more people "one hop away" on a regular basis than you do in your own town.

73, John de KB3CDF

Mail this to a friend! (http://www.eham.net/forums/mailto/1?id=10861)

While driving across scenic America with your spouse, you make comments like, "Wow--look at that beautiful tower!", and "Hey--great antenna farm!"

You have around fifteen unfinished electronics projects lying around the shack.

You bought $500 worth of test equipment to help you build a $50 rig.

You've gotten into heated arguments over whether or not a conjugate match presents an open circuit to reflected waves.

You took a 25th anniversary trip to KH6 and brought a rig along.

You got up the morning after your wedding day and made about 20 Q's in the CW SS.

You've got more parts than Digi-Key.

You've bought surplus equipment at a hamfest that required a fork lift to pick up.

You were indoors on 6 or 2 meters during a beautiful meteor display.

Miscellenous washing machine squeaks and bird chirps sound like CW to you.

You spend your lunch hour cruising ham web pages.

You've grabbed the wrong end of a soldering iron.

You've burnt the tips off your meter probes.

As you might guess, I've done most of these.

YOU might be a HAM if...

IF you say to your XYL.. "look at that lovely tree".[reffering to a 100ft hight tree with not many branches on it] thinking "I could put a DIPOLE up there if i had it in my back yard. then my XYL could enjoy it aswell."

I have a interesting story that is true of my own expences that i will tell next..

YOU MIGHT BE A HAM IF..

HAve ever turned a tree into a antenna and used your mothers wheel barrow as the reciever.

I once read a article in a WIA mag[wireless intertute of australia] about a ham turning a big gum tree into a antenna.. so the next day i got up and stared looking around my house for a big enogh tre to convert.. there was a nice big gum about 300metres away[too mutch coax.. RG58] so i settled on a old slump plum tree that was next to the radio shack but very small. I decided to give this tree a go and see if it works. So i workded out the Radius of the tree and drillded a hole halfway through the tree then hammarded a bold into the hole.I wanted the best results out of my tree so i ran RG-213 coax to it. i simply attached the coax to the bolt with one of dads hose clips. Then i found had a problem...what do i do with the braid of the coax???. [i was a CBer in those days..not many brains] The coax problem was soon solved.I went and snuck mums wheel barrow away when she was not looking and attatched the braid to it. Time form trans mitting. well to my supprize it loaded up 2:1 VSWR ratio..Well that was me on 26MHZ transmitting off my tree and wheelbarrow. The antenna workded great and i was happy with it.. couldent be better.

the funny thing is that i was running RG-58 to my beam and RG-213 to my tree.

this is a true story that no one ever believes when i tell them.

HOW IS THE ANTENNA YOU ASK?

Well today the tree is dead..[it dided after i finishded tranmitting from it] and the wheel barrow is a rustded out mess at the botom of it.

P.S. MUM NEVER GOT HER WHEELBARROW BACK.

73s for now

1. Been discovered by the xyl to be re-arranging your shack in order to find a place to put the new rig you haven't told her about yet.
2, Critiqued the fists of the ops in war movies and documentaries because NOBODY has that much play in their key.
3. Left the Family Room during a Holiday get together to make a quick contact because, wow, it's been a whole four hours, and you don't want your fist to get sloppy.
4. Told your son that, "One day, all this will be yours", and he doesn't respond.
5. Laid awake at night trying to creatively figure a way to rearrange your bills so you could put that hundred dollars you planned on sending the hospital on your son's surgery next month into the money you've been stashing back for the rig upgrade in your shack.

You are a bubblegum pop fan, and you write ham radio parodies of your favorite bubblegum pop songs even though only about 10 people in the world are hams AND bubblegum pop fans. (I have parodied "Baby One More Time" by Britney Spears and "Genie In A Bottle" by Christina Aguilera.)

A couple of true ones:
You're on ur honeymoon in KH6 land, taking pictures and the XYL asked why I took a pic of a group of hi-rises and I point out the tribander on top of a 15 story building (hmmm maybe thats WHY she is an ex-wife)

The first picture of ur newborn son has ur HT in his bassinet with him (sorry Nick)

When you scout out new real estate, you know where ALL the HV distribution lines are located and if they will interfere with 160/80 mtr DXing.

You work for the local power company and they DO NOT like you pointing out all the noisy insulators on the system

- Neigborhoods kids stare and you and wonder why a grown man is alone in the woods throwing a rock with a string up through the trees.

- You justify your shack mess by pointing out another ham's is much worse

- Power supplies excite you.

- The smell of burning solder gets you all gushy.

- You are compulsed to tweak perfectly working electronic devices.

- You've stripped wire with your teeth.

- The smell of new electronics being opened has more appeal than that new car smell.

- You know what silica gel is.

- You've just had to open the silica gel.

- You save silica gel (just in case, could come in handy some day).

- You save inch long bits of wire (could come in handy some day).

- You save anything that has a high probablity of never being used (doesn't mean it won't come in handy someday yet)

Rick

If when out walking with your HT, speaker mike and hat antenna you hear the words "five oh" said behind your back.

If not only your two local Radio Shack stores know you by name but also the ones in the next two towns.

If when driving through crackville people hide when seeing the antennas on your van.

If when using your cellphone you catch yourself ending a conversation with your callsign.

If you start telling your nonham friends about last night's band opening.

When you become an SK, your XYL sells your station for what you TOLD her it was worth, Which is far far less than the $ 15,000 you ACTUALLY spent.

You buy a home telephone network and tie it into your ham station so that you won't miss out on any rare DX while you are in the bath room.

You are reminded by your XYL of your prior agreement with her that you will spend an equal amount on her at the diamond connection...Right after you've shown her that new rig and linear amp that cost Only $6250.00!!

You realize that you have been copying what you thought was a random code practice when in reality it was the washing machine making those weird noises again.

Your neighbor grabs ahold of your new mobile hf antenna just as you key the mike and you hear him say, "What's thIZZZZZZZZZZZZ????

3 more:

+You've destroyed at least one HT by closing a car door on it (by forgetting to disconnect the speaker-mike before exiting).

+Your XYL is put to sleep by the chatter on 2 meters at night.

+When evaluating two similar job offers, you decide to take the one with a longer commute so you can operate mobile longer each day.

you tell the real estate agent you will only look at houses that have at most 10 degree line of sight to any mountains (and then wonder how to explain what you just said?); don't have any deed restrictions against towers; aren't near any power distribution lines; have lot at least 190 feet wide; and prefer underground utilities. Oh by the way, it has to be a 3 bedroom, 2 bath with a two car garage.

When you go to look at a house, you tune your car AM radio to ambient noise, to hear if there is any QRN.

you had a 220 line installed in your play room.

are afraid of heights and buy a 75 foot tower.

buy electrical black tape in ten packs.

after pointing out where due east is, for a visiting Muslim friend, you tell him the short path to Mecca is actually NE.

you have an ARRL Hand book in your bathroom.

you switched from Mac to Wintell so that you can run antenna modeling and logging software.

look at the full moon and be awed that you can see the mid point of a DX path for some people.

You wonder what someone is laughing about when they say ?Hi.?

December 14, 2001
***************

IN THIS EDITION:

* +FCC still singing the postal blues
* +Ham radio enforcement under Riley Hollingsworth enters fourth year
* +ARISS Newfoundland contact commemorates Marconi feat
* +Ham-sailor is back home
* +Petition calls for electromagnetic pulse shielding
* +Ham expertise restores police and fire dispatching
* +ARRL Instructor, Recruiter, Education award nominations open
* Solar Update
* IN BRIEF:
This weekend on the radio
Amateur Radio Emergency Communications Course December/January
registration
Christmas City special event set
Tune up the radio and turn on the kids
ARRL reminds FCC of "legacy" amateur microwave allocation
FCC nixes FRS calling channel proposal
Ohio ham sentenced in police radio jamming case
Question Pool Committee cuts questionable questions
DC-area repeater group waives dues for members on active duty

+Available on ARRL Audio News

==========================================================

==>FCC STILL SINGING THE POSTAL BLUES

E-mail it or fax it, but--at least for now--if you've got something to send
to the FCC, don't put it in the mail if you expect the FCC to receive it
anytime soon. The FCC said this week that, because of the mail situation, it
still is not processing Amateur Radio vanity call sign applications--even
those filed electronically--because hard copy and electronic vanity
applications get equal processing priority.

In the aftermath of the recent anthrax incidents involving the mails, the
FCC began diverting mail destined for Gettysburg and for its Washington, DC,
Headquarters to special-handling facilities. The Commission likely will not
resume vanity processing until the mail situation is untangled.
```

The FCC has processed vanity applications received through October 14. Vanity applications received after that still are on hold, but vanity fees paid by credit card for electronic filings are being charged to holders' accounts.

FCC staff members in Gettysburg, Pennsylvania--the office that handles vanity processing and issues all Amateur Radio licenses--say they're working on a two-week mail backlog. In mid-November, the Gettysburg office began diverting mail addressed to its 1270 Fairfield Road location to another site in town for special handling. But, staffers say, some earlier mail to Gettysburg was diverted to FCC Headquarters for decontamination with other federal mail and is yet to be returned.

Since October 19, the FCC has been urging all of its customers to avoid using the mails to conduct business with the agency and to use electronic means to file comments or applications. The FCC has been acting on amateur renewals and administrative updates filed on-line via the Wireless Telecommunications Bureau's Universal Licensing System <<http://wireless.fcc.gov/uls/>. As of December 3, all applicants must include an FCC Registration Number (FRN) when filing.

Mail sent to FCC Headquarters has been diverted to a warehouse facility in Capitol Heights, Maryland, since late October. The FCC has indicated that it continues to track the date of receipt for each piece of mail.

An FCC spokesperson in Washington has assured that no mail has been destroyed and that the Commission probably would permit additional time to include any comments filed on paper in a proceeding that might be caught in the special-handling and decontamination process. The FCC staff member invited those who had filed paper comments in a proceeding to file their comments again electronically, using the FCC's Electronic Comment Filing System (ECFS) <http://www.fcc.gov/e-file/ecfs.html>.

The FCC said the US Postal Service will continue to accept and will divert all mail addressed to 1270 Fairfield Road, Gettysburg--the office's physical location--to the off-site mailroom. The Gettysburg office now only accepts hand and courier deliveries at the rear entrance of 35 York Street, Gettysburg.

==>"HOLLINGSWORTH ERA" OF AMATEUR ENFORCEMENT ENTERS FOURTH YEAR

FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth, K4ZDH, this week praised the overall level of Amateur Radio compliance with FCC rules as "outstanding." His assessment came as the current era of Amateur Radio enforcement under his guidance and direction enters its fourth year.

"The vast majority of operators are proud of the service and want to contribute to it and want to pass on the great legacy that it has become," Hollingsworth said in a statement marking the occasion. "May it last a thousand years!"

An amateur for 41 years, Hollingsworth also declared his pride in the Amateur Service. "I saw the energy and compassion and excellent operating of amateurs at the Pentagon and World Trade Center after September 11," he said. "I've seen and heard it at the National Hurricane Center in Miami--home of W4EHW--and in countless meetings with individual amateurs and at amateur events all over the United States."

Hollingsworth said US hams "have a lot to be proud of," and he urged them to "participate in Amateur Radio with enthusiasm, celebrate it, enjoy it and share it, because you have made it an incredible national resource and the only truly fail-safe communication service on the planet Earth."

Hollingsworth again reminded amateurs to be acutely aware of the image they present to anyone who might be listening. "I hear far too many operators who don't realize what a bad reflection they are on American amateur operators," he said.

Now nationally recognized and respected within the amateur community, Hollingsworth was relatively unknown outside the FCC bureaucracy when he volunteered to take on the challenge of amateur enforcement in 1998. For several years prior, the FCC had all but abandoned amateur enforcement. Hollingsworth noted that it was not until another plea went out from the ARRL to the FCC in the summer of 1998 that the FCC responded. The agency transferred Amateur Service enforcement from the Wireless Telecommunications Bureau to what was then called the Compliance and Information Bureau. The FCC subsequently created the Enforcement Bureau to handle agency-wide enforcement activities.

ARRL President Jim Haynie, W5JBP, lauded Hollingsworth as "a great gift" to the amateur community and expressed appreciation on behalf of the League for what he's been able to accomplish during his tenure. "Over the past three years, Mr. Hollingsworth has breathed new validity and vitality into the enforcement of Amateur Radio," Haynie said. "His strong support for the amateur community as a whole and the ARRL's initiatives, has been unwavering."

Haynie said that Hollingsworth--guided by his passions for Amateur Radio and for the law--"has given hams across the nation reason to pause, think, promote and yes, even laugh about ourselves."

Hollingsworth's statement is available on the ARRL Web site <http://www.arrl.org/news/stories/2001/12/12/1/>.

==>NEWFOUNDLAND STUDENTS HONOR MARCONI ANNIVERSARY WITH ISS CONTACT

One hundred years ago in Newfoundland, Guglielmo Marconi used a kite to hoist his receiving antenna aloft to hear the first radio signal to ever span the Atlantic--the simple Morse letter "S." Marconi likely would have been blown away with astonishment if he could have seen youngsters--on the centennial of his epochal accomplishment--sitting where he once sat and carrying on a radio conversation with someone in an orbiting space vehicle.

The successful December 12 Amateur Radio on the International Space Station (ARISS) contact between special event station VO1S on Signal Hill, Newfoundland, and astronaut Frank Culbertson, KD5OPQ, operating NA1SS in space was just one of the events to celebrate Marconi's transatlantic reception in 1901. During the contact, 10 students got to quiz Culbertson about life in space. The ninth-graders were winners of a crystal-set building competition associated with the centennial observance. Looking on were another 125 students and 40 adults, including members of the media.

"The question that seemed to get the most response from the audience was from Chris Mong, age 13, who asked 'If you sneeze on the space station, does the force of the sneeze propel you backwards?'," said ARISS mentor Charlie Sufana, AJ9N. "Frank said 'it can'."

Fourteen-year-old Ashley Evans, wanted to know how the crew members brush their teeth in space. "The only difference between brushing your teeth in space and on the ground is that most people end up swallowing the toothpaste, since we don't have a sink with running water to get rid of it in," Culbertson said.

Melissa Doody, age 15, was curious if the crew could see Newfoundland from the ISS. "Absolutely, we can certainly see you, and I've seen you many times since I've been up here," Culbertson replied. "Unfortunately, the ham radio is not located near a window, so I can't see you right now, but it's a beautiful part of the country."

The ARISS contact--only the third to involve Canadian students--was arranged with the assistance of Memorial University of Newfoundland, the Institute of Electrical and Electronics Engineers, and the Society of Newfoundland Radio Amateurs. The commemorative event marked the first time an ARISS school contact was scheduled while a shuttle was docked with the ISS. The ground team reported later that the signal from NA1SS was "very weak and marginal," and contact between the ISS and the ground held up only for about six minutes, compared to the typical ten. There was speculation that the shuttle Endeavour may have blocked signals and led to the shorter-than-usual contact window.

Graham Dillabough, VE6KJ/VO1DZA, served as control op. Sufana congratulated Dillabough and his teammates for battling high winds--gusting at 110 km (68 miles) per hour--and even some snow to erect the antennas necessary for the contact. The high winds kept the visitors from atop Signal Hill itself; gear for the ARISS contact was set up in the visitors' center instead.

Culbertson, who's completing a four-month tour of duty aboard the ISS, turns over the reins this week to Expedition 4 crew commander Yuri Onufrienko, RK3DUO. The other Expedition 4 crew members are fight engineers Dan Bursch, KD5PNU, and Carl Walz, KC5TIE. The Expedition 3 crew has been aboard the ISS since August.

==>HAM-SAILOR COMPLETES "THE BIG ROUND TRIP"

David Clark, KB6TAM--the oldest person to sail solo around the world--arrived back in Fort Lauderdale, Florida, December 7 to a huge

welcome. He'd been on the high seas for two years.

"They made a big deal out of it," said Chuck Baer, W4ROA, an ARRL Assistant Southeastern Division Director who followed Clark's journey and was on hand for the Florida homecoming. "The Guinness Book of World Records people were there to declare it official." He said Clark, 77, was in high spirits and glad to be back on solid ground.

Although Clark technically had completed his circumnavigation when he arrived back in the Bahamas in November, he had said he would not consider his journey complete until he'd returned to the port from which he'd departed two years earlier. Originally intending to arrive back in Florida in time for his 77th birthday last May 17, Clark decided instead to sit out much of the Atlantic hurricane season in Trinidad.

In Fort Lauderdale, Clark was reunited with his wife, Lynda, and other family members whom he had not seen since setting sail in 1999. Baer said a crowd of around 300 people--including news media--was on hand, and Clark's arrival was heralded by a plume of water from a Fort Lauderdale fireboat. A local high school band and a Navy ROTC color guard added to the pomp and circumstance.

Clark almost lost his life a year ago when his original sailboat, the Mollie Milar, sank off the coast of South Africa. Clark bought another sailboat--a smaller one that he named Mickey after his canine sailing companion lost in the rescue effort--and he resumed his quest in April 2001.

Clark used Amateur Radio throughout his two-year odyssey to keep in touch with his family. Having the radio aboard also may have saved his life. When his boat began sinking off South Africa, Clark put out a distress call on ham radio that was relayed to maritime authorities. The crew of a commercial vessel plucked him out of the water to safety.

Clark in part supported his adventure with corporate sponsorship, but he funded much of the trip through Social Security earnings and occasional clarinet gigs. Hams along the way also provided financial assistance.

==>EMP SHIELDING PROPOSAL COULD INCLUDE AMATEUR RADIO GEAR

A petition recently put on public notice by the FCC would require that all electronic equipment subject to the Commission's jurisdiction be shielded against electromagnetic pulse (EMP) damage. The proposal, as drafted, would apply to both new and existing equipment that falls within its scope. If the petitioners have their way, that would include Amateur Radio equipment.

EMP--a high-voltage wave of electromagnetic energy--already is known to be a side effect of a thermonuclear explosion. But petitioners Don Schellhardt and Nick Leggett, N3NL, claim that terrorists could initiate an EMP using other technology--so-called "E bombs"--developed by the US military but, as yet, untested on a major scale.

The petitioners propose phasing in rules to require shielding--or "hardening"--to a basic performance standard that would permit "effective,

uninterrupted functioning" of covered equipment following an EMP of 100,000 V per meter. They say that's twice the estimated EMP from a single high-altitude nuclear explosion. Schellhardt and Leggett say the best defense against EMP is copper shielding.

Amateur Radio is mentioned only once in the Schellhardt-Leggett petition, and Leggett told the ARRL that they kept their proposed rules for Amateur Radio equipment "rather vague" for now. He said their primary intention is to promote serious discussion on the EMP issue--especially in the wake of the September 11 terrorist attacks.

"We do lean towards mandatory requirements for some type of EMP protection for commercially produced amateur radio equipment," Leggett said. "We would both very much like to see constructive progress in the protection of amateur radio equipment from EMP events and attacks."

Schellhardt and Leggett addressed the Amateur Radio issue more directly in reply to comments filed on their petition by REC Networks. "How much emergency communication is amateur radio going to provide if the radio sets are disabled by intense EMP pulses?" they asked rhetorically. "Our opinion is that amateur radio earns its frequencies by its significant emergency communications and technical self-training activities. EMP shielding fits naturally into this public service orientation."

The FCC has designated the petition as RM-10330. Although the comment deadline officially ends December 14, late comments might be accepted in light of the FCC's mail system delays. Interested parties may comment using the FCC's Electronic Comment Filing System (ECFS) <http://www.fcc.gov/e-file/ecfs.html>.

The ARRL has not commented on the Schellhardt-Leggett proposal.

==>AMATEURS RESTORE CITY'S POLICE, FIRE DISPATCHING

Volunteers from the Tulsa Amateur Radio Club helped to restore police and fire dispatching service in Collinsville, Oklahoma, after flames destroyed the city's radio gear and disrupted 911 service December 1. The early-morning fire badly damaged the 88-year-old Collinsville City Hall, which housed the community's police and fire departments and other offices.

"The city's communication system was functioning, but 911 calls were re-routed to a nearby city, because all the dispatch equipment was lost in the fire," said Oklahoma ARRL Public Information Coordinator Mark Conklin, N7XYO. Even the antenna was lost. As a result, the city had to find a temporary home for police and fire dispatch.

Collinsville, a community of some 4000 people, is located about 12 miles north of Tulsa.

Conklin says Collinsville arranged to set up its dispatching center in the Collinsville Rural fire station.

Area amateurs alerted to the devastating fire quickly responded to help, and Tim Diehl, KB5ZVC, notified ARRL Oklahoma Section Manager Charlie Calhoun, K5TTT. TARC Public Service Liaison Dan Lamoreaux, WG5Z, rounded up Gregg Wonderly, W5GGW, Dave Smith, KD5OIJ, and Tom Roininen, KB5HMZ, as additional volunteers. The volunteers brought the club's portable repeater system, which had been built using commercial radio equipment converted for amateur use.

Conklin says the amateurs reprogrammed the repeater for the police and fire departments to use as an emergency dispatch radio. "By 9 o'clock that evening all systems were totally operational and police and fire dispatching was being handled though the club's loaned radio equipment," Conklin said.

Established in 1924, the Tulsa Amateur Radio Club is the state's oldest ham radio club. It operates the W5IAS linked repeater system and its members are active in public service.--Mark Conklin, N7XYO/TARC

==>NOMINATIONS SOUGHT FOR ARRL INSTRUCTOR, RECRUITER, EDUCATOR AWARDS

Nominations close January 31 for ARRL awards that recognize excellence in teaching Amateur Radio classes, using Amateur Radio in the classroom, and recruiting others to Amateur Radio.

The ARRL Herb S. Brier Instructor of the Year Award goes each year to a volunteer Amateur Radio instructor. The ARRL Professional Educator of the Year award goes to a professional teacher who has incorporated Amateur Radio into his or her class curriculum. The ARRL Professional Instructor of the Year award is presented to a paid, non-state certified ham radio instructor, such as those teaching classes offered through adult education programs. The ARRL Excellence in Recruiting Award goes to a ham who exemplifies outstanding recruiting enthusiasm and technique and has gone the extra mile to introduce others to Amateur Radio.

All winners receive engraved plaques. Complete information and nomination forms are available on the ARRL Web site, <http://www.arrl.org/ead/award/>. Completed forms go to section managers before January 31, 2002. For more information, contact Jean Wolfgang, WB3IOS, jwolfgang@....

==>SOLAR UPDATE

Solar soothsayer Tad Cook, K7VVV, Seattle, Washington, reports: This has been another relatively quiet week with little in the way of geomagnetic upset. Planetary A indices were in the single digits through Tuesday. On Wednesday the planetary K index went to five, which is quite high, but then quieted back down.

A powerful solar flare erupted Tuesday, but the resulting coronal mass ejection is not Earth-directed. It could cause an upset starting Friday, so the predicted planetary A index for Friday through Monday is 15, 20, 25 and 10.

Average sunspot numbers dropped this week by more than 16 points, and average solar flux was down by almost 3 points. Solar flux is expected to decline, with Friday through Monday values around 220, 220, 210 and 200, and

it should reach a short term minimum around December 22-23.

Geomagnetic disturbances could cause problems for the ARRL 10-Meter Contest this weekend, but the effect is difficult to gauge at this point.

Sunspot numbers for December 6 through 12 were 226, 200, 218, 225, 224, 154 and 183, with a mean of 204.3. The 10.7-cm flux was 246.7, 225.9, 220.5, 224.2, 219, 220.6 and 236.7, with a mean of 227.7. Estimated planetary A indices were 8, 5, 5, 3, 4, 4 and 12 with a mean of 5.9.

==>IN BRIEF:

* This weekend on the radio: The ARRL 10-Meter Contest, the OK DX RTTY Contest, the 28 MHz SWL Contest, the Croatian CW Contest, and the Great Colorado Snowshoe Run are the weekend of December 15-16. JUST AHEAD: The AGB Party Contest is December 21, the DARC Christmas Contest is December 26 and the RAC Winter Contest (CW/SSB), the Stew Perry Topband Challenge (CW) and the Original QRP Contest (CW) are the weekend of are the weekend of December 29-30. Straight Key Night is January 1, 2002 UTC. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Amateur Radio Emergency Communications Course December/January registration: Seats remain available for the Amateur Radio Emergency Communications Level I (EC-001) on-line class that opened December 10. Registration for the Level II (EC-002) class opens Monday, December 17. To register, visit the ARRL Course Registration Page <https://www.arrl.org/forms/cce/> after 4 PM Eastern Time. Registration will remain open until all seats are filled. Beginning in January 2002, registration for the Level I class will open on the first Monday, January 7; registration for Level II will open on the second Monday, January 14; and registration for Level III (EC-003) will open on the third Monday, January 21. Courses must be completed in order, starting with Level I. To learn more, visit the ARRL Certification and Continuing Education Web page <http://www.arrl.org/cce> and the C-CE Links found there. For more information, contact Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* Christmas City special event set: The Christmas City and Delaware-Lehigh Amateur Radio clubs will sponsor the traditional WX3MAS special event operation from the twin Christmas Cities of Bethlehem and Nazareth, Pennsylvania, from 1200 UTC December 15 to 2400 UTC December 16. Operation will be on or about 3.979, 7.270, 14.265, 21.365 and 28.465 MHz, SSB. For a certificate, QSL to CCARC/DLARC WX3MAS, Greystone Bldg, Gracedale Complex, RR 8, Nazareth, PA 18064-9211.

* Tune up the radio and turn on the kids: Are you ready? Here comes Kid's Day! On Saturday, January 5, sit down at your radio, tune it up, then share it with the younger generation. Let them talk about Pokemon, school, games, Harry Potter, computers, friends and other kid stuff, while you manage the

technical aspects and just watch and listen for a change. Kid's Day is always lots of fun for all ages, and it's a terrific opportunity for parents, clubs and individual amateurs to show youngsters what great fun ham radio can be. For more information about Kid's Day, visit the Kid's Day Rules page on the ARRL Web site <http://www.arrl.org/ead/kd-rules.html>.

* ARRL reminds FCC of "legacy" amateur microwave allocation: The ARRL has reminded the FCC that the Amateur and Amateur-Satellite Services have primary access to the 75.5 to 76.0 GHz band--a so-called "legacy" allocation--until 2006. Loea Communications Corporation filed a Petition for Rule Making in September seeking to establish Part 101 licensing and service rules for fixed, point-to-point operation in that part of the spectrum using narrow beamwidth antennas. In reply comments in the proceeding (RM-10288), ARRL noted that neither the petitioner nor any commenters had mentioned the amateur allocation, due to phase out as a result of a shift in amateur allocations at WRC-2000. Part 97 Amateur Service rules include full access to the band 75.5 to 76 GHz and 77 to 81 GHz, conditioned on protecting, and the absence of interference protection from, government and non-government radiolocation. The ARRL said it had no objection to Loea's petition but wanted the FCC to note in any rules it adopts that the Amateur Service is entitled to operate at 75.5 to 76 GHz on a primary basis until 2006.

* FCC nixes FRS calling channel proposal: The FCC has turned down a petition to establish Family Radio Service channel 1 (462.5625 MHz) as a national calling channel. The petition was filed by Alan Dixon, N3HOE, and Robert K. Leef, KB6DON. In a six-page Order, the FCC December 5, pointed out--among other things--that FRS Rule 3 already requires FRS users to give priority to emergency communications concerning the immediate safety of life or the immediate protection of property on any of the 14 authorized FRS channels. "The current rules, therefore, already provide that emergency communications have priority over ordinary communications," Kathleen O'Brien Ham, deputy chief of the Wireless Telecommunications Bureau, wrote on behalf of the Commission. The FCC Order said a national calling channel was not necessary, given that FRS is intended only for short-range communication over distances of a half mile or less. The Order also said it did not want to burden the FRS with additional technical or operational rules. According to the FCC Order, the petition also called on the FCC to adopt requirements for manufacturers to include certain additional features in FRS units, but Dixon said that's an incorrect characterization. "At no point would the petition require manufacturers to include any additional features into FRS units," he told ARRL.--FCC

* Ohio ham sentenced in police radio jamming case: Kenneth Kelly, WT2FBI, has been sentenced to five years probation after pleading guilty of attempted disrupting public service--a fifth-degree felony in Ohio. FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth says Kelly did not appear by October 30 for requested retesting, and his license will be canceled. Kelly had been indicted on a felony charge of disrupting public service by allegedly jamming and talking on the Middletown, Ohio, police radio system in July. He had been held in the Butler County jail pending sentencing. The assistance of members of the Dial Radio Club--who did some

direction finding and also taped Kelly's legal transmissions on 2 meters for comparison with the voice showing up on the police frequencies--was instrumental in solving this case.--Ernie Howard, W8EH

* Question Pool Committee cuts questionable questions: The National Conference of Volunteer Examiner Coordinators' Question Pool Committee has stricken three questions from the new Element 4 Amateur Extra class question pool. The new Element 4 question pool was released to the public November 30 and must be used as the basis for all Element 4 examinations starting July 1, 2002. Questions deleted were E2E09, E2E10 and E6B17. Subsequent questions in each subelement of the pool will not be renumbered. "These three questions are no longer part of the question pool and should not be administered as part of any examination," a QPC announcement said.

* DC-area repeater group waives dues for members on active duty: The Green Mountain Repeater Association--which operates the 146.610 and 146.880 repeaters in the Washington, DC, area--has approved a motion to waive renewal dues for members who are on active military duty. "It is the least we can do for our military members," said GMRA President Paul Freirich, W3HFA. The waiver will remain in affect as long as the member is on active duty. GMRA member and "founding father" Murray Green, K3BEQ, urged other clubs across the nation to "follow suit as a gesture of support to Amateur Radio operators serving our nation."

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; http://www.arrl.org. Jim Haynie, W5JBP, President

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb at http://www.arrl.org for the latest news, updated as it happens. The ARRLWeb Extra at http://www.arrl.org/members-only/extra offers ARRL members access to informative features and columns.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site,
http://www.arrl.org/members/. You'll have an opportunity during registration
to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other
material. To change these selections--including delivery of The ARRL
Letter--registered members should click on the "Member Data Page" link (in
the Members Only box). Click on "Modify membership data," check or uncheck
the appropriate boxes, and click on "Submit modification" to make selections
effective. (NOTE: HQ staff members cannot change your e-mail delivery
address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be
posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio
Club: Send e-mail to majordomo@... (no subject needed). The body of the
message should say "subscribe letter-list" to subscribe or "unsubscribe
letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who
receive The ARRL Letter via this listserver.)

==>ARRL STUDY PANEL RECOMMENDS ELIMINATING NOVICE BANDS

On the basis of nearly 5000 survey responses, the ARRL Novice Spectrum Study
Committee has recommended that the ARRL petition the FCC to eliminate the
Novice CW subbands and allow Novice and Technician with Element 1 credit
licensees to operate CW on the General 80, 40, 15 and 10-meter CW
allocations at up to 200 W output. The panel suggested setting aside
```

portions of those bands for "slow CW operation" to aid new CW operators in enhancing their skills. The committee recommended refarming the current Novice/Tech Plus subbands in part to allow expansion of the phone allocations on 80, 40 and 15 meters.

The committee's complete report will be presented to the ARRL Board of Directors for consideration during its annual meeting in January. The committee's determinations were based on opinions expressed by 4744 respondents to an ARRL Novice Spectrum Study survey launched in June. Those expressing their opinions included ARRL members and nonmembers. Nearly 61% of those responding were Extra class licensees.

The committee, chaired by ARRL International Affairs Vice President Rod Stafford, W6ROD, has been studying the status and usage of the Novice/Technician Plus HF bands with an eye toward determining what changes to usage of that spectrum might be needed now that the FCC no longer issues new Novice licenses.

The survey offered possible refarming options for each of the bands involved--including no change at all. Generally speaking, the predefined options proposed retaining Extra class CW subbands on the affected bands, setting aside expanded CW reserves for all license classes except Technicians lacking Element 1 credit, and dividing the remaining spectrum into expanded phone segments for General, Advanced and Extra class operators. A guiding principle was that no class of licensees would lose any privileges as a result of refarming.

The committee recommended expanding the phone bands in accordance with the most popular of the survey choices offered--three for 80, 40 and 15 meters and two for 10 meters. Here's a summary:

* On 80 meters, nearly 40% of those responding opted for a plan that would extend the US phone allocation to 3700 kHz, with Extras permitted on the entire subband, and with Advanced and General class subbands starting at 3725 and 3800 kHz respectively.

* On 40 meters, nearly half of the respondents picked the plan to extend the primary US phone allocation to 7125 kHz, with Extra and Advanced licensees allowed on the entire segment and Generals from 7175 kHz and up. (The committee's report suggested no changes to the special allocations for amateurs on certain Pacific or Caribbean islands and in Alaska.)

* On 15 meters, again, nearly half of those responding wanted the US phone allocation extended to 21,175 kHz, with Extras permitted on the entire allocation, and Advanced and General subbands beginning at 21,200 and 21,250 kHz respectively.

* On 10 meters--where Novice and Tech Plus licensees already may operate CW, RTTY and data from 28,100 to 28,300 kHz, nearly 55% of the respondents favored a plan to retain the US phone allocation from 28,300 to 29,700 kHz and to extend CW access to Novice/Tech Plus operators to 28,000 kHz--an additional 100 kHz. The current Tech Plus 28,300 to 28,500 kHz phone segment

would be retained.

The committee's report says that if the ARRL Board adopts the plan, the League should include any request to the FCC to implement the changes within an omnibus filing encompassing other issues, rather than as a separate petition. Consideration of any necessary ARRL Band Plan changes would follow ultimate FCC approval.

==>ANTENNA MODELING IS NEXT ARRL CERTIFICATION PROGRAM OFFERING

Building upon the success of its emergency communication courses, the ARRL Certification and Continuing Education (C-CE) Program will offer an on-line course in computerized antenna modeling. Program Coordinator Dan Miller, K3UFG, said the new course will open for registration soon.

"This course is designed to assist students in mastering the art and science of antenna modeling using computer software," Miller said. The course was developed by L.B. Cebik, W4RNL, and course content was edited by ARRL Senior Assistant Technical Editor (and antenna guru) Dean Straw, N6BV. At least initially, the antenna modeling course will be offered once per month for up to 50 registrants. The course is scheduled to take 12 weeks to complete. The fee will be $80 for ARRL members and $120 for nonmembers.

While Miller doesn't expect demand for the antenna modeling course to come anywhere near that for the emergency communications series, he's hoping it will be popular enough to eventually spin off a "live" classroom course.

Since the introductory Level I emergency communication course was offered for the first time one year ago this month, the popular series has expanded to three levels, with the addition of the intermediate and advanced courses. Miller reports that more than 1600 students have signed up for seats in one or more of the series, and registrations for both on-line and live classes spiked in the wake of the September 11 terrorist attacks.

"It exceeded my expectations of one year ago," Miller said. He said he also was pleased to be able to offer the Level II and Level III classes this year.

Next on tap for the ARRL C-CE Program is a course on HF digital communications, which will become available early next year. The Certification and Continuing Education Program is seeking HF digital mode aficionados to beta test the course and to serve as mentors to students taking the initial classes.

To learn more, visit the ARRL Certification and Continuing Education Web page <http://www.arrl.org/cce> and the C-CE Links found there. For more information, contact C-CE Coordinator Dan Miller, K3UFG, cce@....

==>ALL-HAM CREW SETTLING IN ABOARD ISS; SCHOOL CONTACTS SCHEDULED

For the first time, there's an all-ham crew aboard the International Space Station. The Expedition 4 crew of Commander Yuri Onufrienko, RK3DUO, and flight engineers Dan Bursch, KD5PNU, and Carl Walz, KC5TIE, is settling into

the ISS quarters that will be its home for the next six months. Amateur Radio on the International Space Station school contacts already are tentatively set for January and February.

Expedition 3 crew members Commander Frank Culbertson, KD5OPQ, Mikhail Tyurin and Vladimir Dezhurov returned to Earth December 17 under heavy security aboard the shuttle Endeavour. Culbertson and his crewmates returned to a planet that's still trying to comprehend and adjust to the changes wrought by the September 11 terrorist attacks, which occurred while the crew was in space. The Expedition 3 crew had been aboard the ISS since August. Operating as NA1SS from aboard the ISS, Culbertson completed nearly two dozen successful ARISS school and educational contacts.

Now it will be the Expedition 4 crew's turn. Penciled in on the ARISS schedule for the new crew are contacts with St Clare School in Waveland, Mississippi, during the week of January 7, and with Harrogate Ladies College (GB2HC) in Harrogate, England, the following week. Depending on the crew's work activities, an effort will be made to schedule one ARISS school or educational contact during a typical week.

New Amateur Radio antennas carried into space for the ISS have been stowed for the time being. Current plans call for them to be installed around the perimeter of the Service Module by the Expedition 6 crew. The new antennas will allow future operation from HF to microwave frequencies, once additional ham gear is brought aboard the ISS.

==>FCC AMENDS PART 15 RULES TO ALLOW HIGHER-POWER DEVICES AT 24 GHZ

Despite objections from the ARRL, the FCC has announced plans to amend its Part 15 rules to allow fixed point-to-point transmitters in the 24.05 to 24.25 GHz band to operate at field strengths of up to 2500 mV per meter. That's 10 times the level currently permitted. Among other interference safeguards, the FCC will require devices operating at these higher field strengths to use highly directional antennas. Amateur Radio is primary at 24.0 to 24.05 GHz and secondary on the rest of the band. The AO-40 satellite includes beacon, digital and analog transmitters in the vicinity of 24.048 GHz.

"This band has accommodated unlicensed transmissions, government radar and amateur facilities with no major conflicts," the FCC said. "By allowing a greater variety of systems to occupy the band, we will provide the opportunity for innovative products and services to be made available to the American public as quickly as demand dictates."

The FCC first proposed permitting the Part 15 devices at the elevated field strengths in 1998, in response to a Petition for Rule Making from Sierra Digital Communications Inc. Sierra had requested that its proposal be authorized to include a portion of the 24.0 to 24.05 MHz segment, but ARRL had argued that such a move would adversely affect amateur operations there, and the FCC agreed. The FCC finally acted in the three-year-old proceeding, ET Docket 98-156, on December 11 in a Report and Order that closely mimics its earlier Notice of Proposed Rule Making.

Noting that Part 15 devices operate in a non-interference basis to licensed services and must accept interference from licensed services, the FCC said it was requiring directional antennas with gains of at least 33 dBi to minimize interference potential. For the same reason, the FCC also imposed more stringent frequency stability and spurious emissions requirements than initially proposed.

The FCC said it disagreed with ARRL that permitting Part 15 devices at the higher field strengths would increase the risk of interference to amateur operations in the 24.05 to 24.25 GHz segment. The Commission said that Part 15 field disturbance sensors have been operating for years in the band at 2500 mV/m field strengths with no adverse affects to other users.

The FCC took issue with ARRL's assertion that the FCC should acknowledge that Part 15 devices are only allowed under the Communications Act when they pose no interference potential to licensed services. The FCC called ARRL's interpretation "overly conservative."

The FCC Order in ET Docket 98-156 is available on the FCC Web site <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-01-357A1.doc>.

==>"SANTA HAM" SPECIAL EVENT A THRILL FOR THE YOUNGER SET

Several hams with young children report their kids have enjoyed the thrill of their lives talking with Santa via ham radio. The W6S "Santa's Workshop" special event operation by ARRL member Mickey Hicks, WO6T, in Bakersfield, California, now is in its 30th year of helping to make the season special for youngsters.

"Hats off to WO6T!" enthused Peter Schipelliti, W1DAD, of Atkinson, New Hampshire, who says he bumped into the W6S Santa's Workshop station while he was tuning around on 20 meters the evening of December 19. He awoke daughter, Geena--at age 6 already a seasoned Kid's Day veteran--so she could talk to Santa.

"She had a great time, especially when Santa recited our address and said that he would be coming next week," Schipelliti said. "Santa reinforced some basic values and reminded her that she should share her toys and continue to be good."

Hicks, 71, says he started his Santa's Workshop as a one-night effort, but he soon realized he needed to expand it. The annual W6S special event now runs for 10 days each Christmas season and occupies 7 to 10 hours of his day, including preparation.

"It's not scripted," he said. "I ad lib all the time." He said he spreads his effort out among several bands too--and notes that 17 meters has been great this year. Hicks estimates that he speaks with 400 to 500 youngsters each holiday season, and sometimes they include children of the youngsters he'd met years earlier.

During his QSO with W1DAD, Santa mentioned his Web cam site <http://www.wo6t.com>. "It was great," Schipelliti said. "We saw Santa from the back and a whole bunch of equipment and computers." Hicks said the Web

cam is a new twist the past couple of years that has proven to be a big hit with the kids.

Schipelliti said he and Geena heard Santa talking with some other children too. "He started out by asking them their name and age. Then, he would ask them one thing they were looking forward to," he said. Santa also joked with the kids and tried to draw out the shy ones, usually with great success.

Schipelliti said that when his son Luciano, almost 5, found out that his sister got to talk with Santa, he wanted to know if Santa would be on the air again. "He made me promise to wake him up so he could speak with Santa Claus on the radio," Schipelliti said.

A ham for 41 years and a long-time Amateur Radio instructor, Hicks says his Santa's Workshop has been a great ham radio recruiting tool. One of his most memorable experiences was when a young girl he'd once spoken with on the air as Santa came by with her ham ticket in hand to thank him in person for getting her interested. "I had tears in my eyes, of course," he said.

The W6S Santa's Workshop special event operates on or about 14.270, 18.135, 21.335 and 28.335 MHz. It continues through Christmas Eve, December 24. QSL via WO6T, who says Santa always appreciates a self-addressed, stamped envelope for the reply card.

==>ARRL STANDARDIZES CLUB NAMES FOR ELECTRONIC CONTEST SUBMITTALS

The ARRL Contest Branch has released a list of standardized club designators to enable the ARRL contest robot to properly count electronically submitted contest scores toward a club's ARRL Affiliated Club Competition point total. ARRL Contest Branch Manager Dan Henderson, N1ND, says a list of clubs that have participated in various ARRL operating events in recent years is posted on the ARRL Web site <http://www.arrl.org/contests/club-list.html>.

ARRL-affiliated club members submitting contest scores for club credit should use their club's name as it appears on the list as a standard designator. In most cases, this means typing the name into the "club" field on the logging program used. Henderson says that clubs must be ARRL-affiliated to participate in the various ARRL Affiliated Club Competitions associated with the ARRL's contest program. Members of clubs that are not ARRL-affiliated should leave that field blank when submitting ARRL contest entries.

"We can adjust the full club names when necessary," Henderson said. "We can edit the list to add new clubs." A standardized list of club abbreviations has not been developed at this point, Henderson explained, because some clubs might share an abbreviation.

"While we realize it isn't the perfect solution to the problem or the solution some would have chosen, it is a system that works within the framework of the database programs we use at the Contest Branch," Henderson said. He invited questions, comments and suggestions. Contact Dan Henderson, n1nd@...; 860-594-0232.

==>SOLAR UPDATE

Solar sage Tad Cook, K7VVV, Seattle, Washington, reports: Today is the "shortest" day of the year! Check out the nighttime bands such as 160 and 80 meters.

Solar flux and sunspot numbers were slightly lower this past week compared to the previous period. Average sunspot numbers were off by a little more than four points, and average solar flux was down by nearly eleven.

The view of the sun currently shows a few spots, with not much activity. The current outlook shows solar flux rising slowly in the near term, reaching a peak in the period December 30 through January 2. Solar flux is predicted to be right around 215 for Friday through Monday, and then rising slowly after that.

Sunspot numbers for December 13 through 19 were 212, 202, 198, 204, 215, 210 and 158, with a mean of 199.9. The 10.7-cm flux was 220.2, 245.8, 217.8, 209.1, 205.5, 211.8 and 208.2, with a mean of 216.9. The estimated planetary A indices were 4, 4, 11, 10, 15, 8 and 9 with a mean of 8.7.

==>IN BRIEF:

* This weekend on the radio: The AGB Party Contest is December 21, the DARC Christmas Contest is December 26 and the RAC Winter Contest (CW/SSB), the Stew Perry Topband Challenge (CW) and the Original QRP Contest (CW) are the weekend of December 29-30. Straight Key Night is January 1, 2002 UTC. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and http://www.hornucopia.com/contestcal/weeklycont.html for more info.

* Amateur Radio Emergency Communications Course January registration: Beginning in January 2002, registration for the Amateur Radio Emergency Communications Level I course (EC-001) will open on the first Monday, January 7; registration for Level II (EC-002) will open on the second Monday, January 14; and registration for Level III (EC-003) will open on the third Monday, January 21. Courses must be completed in order, starting with Level I. To learn more, visit the ARRL Certification and Continuing Education Web page <http://www.arrl.org/cce> and the C-CE Links found there. For more information, contact Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* Ducie Island DXpedition set for March 2002: With assistance from an ARRL Colvin Award, the Pitcairn Island Amateur Radio Association (PIARA) plans to mount a DXpedition to Ducie Island in March. Ducie--which became the newest ARRL DXCC entity as of November 16, 2001--has not yet been activated, making it the most-wanted DXCC entity. Poor weather scuttled the initial attempt to land a DXpedition team on Ducie Island in November. PIARA President Tom Christian, VP6TC, has announced that a DXpedition team now plans to depart by boat from Mangareva on March 12. Once on Ducie Island, the DXpedition will use a VP6 call sign to be announced at the start of the operation, which will include both SSB and CW and possibly RTTY on 160 through 6

meters. Six-meter QSLs go to JA1BK. Log checks will be available on the "DX Cluster from Japan" Web site, <http://www.big.or.jp/~ham/dx.html>. More information is available on the VE3HO QSL Manager Web page <http://www.ve3ho.com/ve3ho-qslmgr.htm> and on WD4NGB's DX Is Web site, <http://www.qsl.net/wd4ngb/ducie.htm>.--Tom Christian VP6TC

* FCC turns down request for special Winter Olympics prefix: The FCC has denied a request from a Utah amateur to permit hams in that state to identify using a special prefix during the upcoming Winter Olympics in Salt Lake City. D'wana R. Terry, chief of the Public Safety and Private Wireless Division within the Wireless Telecommunications Bureau, told Thomas M. Schaefer, NY4I, that his request was "inconsistent with the international Radio Regulations" and could not be granted. Schaefer had asked the FCC to authorize hams in Utah to substitute the numerals "02" or "2002" for the numeral "7" when identifying on the air (Schaefer, with a numeral "4" in his own call sign could not have taken advantage of his own proposal, had it been granted). He noted that a similar waiver of the FCC's rules was permitted in 1996 for the Atlanta Olympics. Terry pointed out that the special temporary authority granted for the Atlanta games covered all amateurs in Georgia, while Schaefer's proposal for the Salt Lake City games would only cover hams with a numeral "7" in their call signs. She said rules applying to waivers have changed significantly since then, and Schaefer's request doesn't fall under the newer guidelines. She recommended hams take advantage of the special event call sign system or the provisions of Section 97.119 (c) of the rules, which permits the use of self-assigned indicators.

* K3RXK appointed as a Solar System Ambassador: ARRL Life Member and ARRLWeb Contributing Editor Tony Curtis, K3RXK, has been honored with the appointment as a NASA Solar System Ambassador for 2002. "The Ambassadors program is a NASA public-outreach effort designed to honor dedicated supporters of space research and exploration," said Curtis, who pens the Space&Beyond column that appears on the ARRL Web site <http://www.arrl.org/news/features/2001/12/16/1/>. He also is editor of Space Today Online <http://www.spacetoday.org/>. Space enthusiasts who have demonstrated deep commitment to the subject, the Ambassadors are selected from among the ranks of educators and others. The appointment is for one year and is renewable. Curtis says that last year, the various Ambassadors took part in some 600 events and were seen by more than one-half million people. An Extra class operator, Curtis holds a doctorate in mass communication and has authored 72 books about space, astronomy, computers and electronics. He's associate dean for academic information services at the Union Institute & University in Cincinnati, Ohio. The Solar System Ambassadors Program is sponsored by NASA's Jet Propulsion Laboratory at Pasadena, California.

* KPH coast station ops to be on the air for ARRL Straight Key Night: Maritime Radio Historical Society club station K6KPH will use the transmitters, receivers and antennas of former RCA coast station KPH during ARRL Straight Key Night (SKN), which takes place January 1, 2002, UTC (ie, starts New Year's Eve in US time zones and continues for 24 hours). ARRL sponsors Straight Key Night

<http://www.arrl.org/contests/announcements/skn.html> each year to promote the use of Morse code. K6KPH will take to the airwaves at 0000 UTC, and continue operation into the evening Pacific Time. Anticipated operating frequencies are 3545, 7050 and 14,050 kHz. K6KPH will use 1950s-vintage RCA transmitters. Also listen for the KPH call sign on medium frequency, 426 and 500 kHz. QSL to Maritime Radio Historical Society, K6KPH, 435 Utah Street 4, San Francisco, CA 94110. More information is available on the Maritime Radio Historical Society Web site <http://www.radiomarine.org>.--Dick Dillman, W6AWO

* Special event commemorates ARRL transatlantic tests: Special event station GB2ZE will operate until January 2, 2002, from Ardrossan in southwestern Scotland to mark the 80th anniversary of the successful Amateur Radio transatlantic listening tests of 1921. The tests culminated on December 12, 1921, when ARRL's special representative Paul F. Godley, 2ZE, confirmed reception of 1BCG in Greenwich, Connecticut, which had been erected especially for the tests. Listening between 200 and 400 meters, Godley also heard several other Amateur Radio transmissions from North America during his stay (Godley used a superheterodyne receiver and a Beverage antenna--Ed). GB2ZE will operate CW and SSB on a variety of bands, conditions depending. For more information, contact Andy Goldie, GM0DEX, goldie.seamill@....

* Special event station K1D will prime Kid's Day pump: Special event station K1D, operated by Peter and Jeanne Schipelliti, W1DAD and K1MOM, in New Hampshire, will be on the air starting Saturday, December 22, 2001, and continuing for the next two weeks to encourage participation in Kid's Day <http://www.arrl.org/FandES/ead/kd-rules.html>. The next Kid's Day is January 5, 2002, 1800-2400 UTC. Look for K1D on or around 3895, 14,270, 21,370 and 28,370 kHz. QSL to 7 Dearborn Ridge Rd, Atkinson, NH 03811. A free (via e-mail) K1MOM Amateur Radio Coloring Book for children--including operating aids for Kid's Day, log sheet, WAS map to color in and phonetic alphabet--is available from Jeanne Schipelliti, k1mom@....

* "The Big Project" logo designs due December 28: There's still time to submit your suggested logo design for the ARRL's Amateur Radio Education Project-- "The Big Project." The deadline is December 28. "The theme is using Amateur Radio in education," says The Big Project Coordinator Jerry Hill, KH6HU. "This is your opportunity to show off your creativity." All entries should incorporate the ARRL diamond, portray the proper image in both black-and-white and in color, and be the same size as other standard patches, such as ARES--typically 3.5 inches in diameter. Entries should be submitted electronically at a resolution suitable for QST publication (at least 300 dpi when the image is sized at 4x5 inches or larger; see The ARRL Author's Guide <http://www.arrl.org/qst/aguide/>). The creator of the logo selected as a permanent symbol for The Big Project will receive a handsome wall certificate, and the winner's name will be announced in QST, in The ARRL Letter and on the ARRL Web site. E-mail entries no later than Friday, December 28, 2001, to The Big Project Coordinator Jerry Hill, KH6HU <kh6hu@...>. Resubmit your entry if it's not acknowledged within two business days.

* AMSAT-NA announces Elmer Award: AMSAT-NA Awards Manager Bruce Paige, KK5DO, has announced a new Elmer Award to recognize those who encourage and assist satellite newcomers. The award offers three levels--beginner, intermediate and expert. For example, Paige said, to qualify for the beginning level, a satellite operator would need to work: one school club station; four female (YL) operators; four operators age 16 or younger; and 10 operators who have been licensed for less than two years at the time of contact. Paige said qualifications for the intermediate and expert levels build on the beginner level. Any Amateur Radio satellite may be used for contacts, but contacts should be voice or CW only, and QSOs with the ISS, shuttle or any other manned spacecraft are not eligible for this award. Contacts must be made on or after November 1, 2001. For more information, contact Bruce Paige, KK5DO, kk5do@... .

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

428. HAM Interview by Srikant Gore on radio

Yahoo group: m_a_r_s
Date: 2001-12-24 03:59:00 UTC
From: ajay solanki
Topic: 427 Message: 428

Hi,
I am currently at banglore.
There was a very good HAM interview given by Srikant
Gore on radio last week.
Laxman Halbe VU2LH from banglore would like to
comunicate with Srikant.
If any one of you knows the address or callsign or
mail id of Srikant please forward it to me.
Regards,
Ajay...

From: Nirav Sanghavi
Topic: 432 Message: 432

Dear YL/OM:

I have sorted the member details sent by VU2HIT just to make it user-friendly since we may not remember each ham's MARS membership number.

Changes made before sorting are

Dr. before Sudhir Shenoy put after his name

Mehul A.C. has become Mehul Chovatia

P.V. Jaiprakash has become Jaiprakash P.V.

The list is now as below.

my best regards,

Nirav Sanghavi

Dear NLF,

Can those hams participate who do not have any equipments.

1. Your BMC Ward.:D-Ward
>2. VHF/ UHF equipment.Nil
>3. Antennas:Nil
>4. Choice to work from House / Field.:either
>5. Suggestions.

437. Happy Year Ahead

Yahoo group: m_a_r_s
Date: 2001-12-31 07:30:32 UTC
From: madhu rajan
Topic: 437 Message: 437

Wishes for a great year ahead for everyone!!!

Hope to meet everybody on the fox hunt...so get out your khakis, hunter topi
and tune up that directional antenna!

Cheers!
Madhu

DEAR FOX HUNTER
THANK YOU FOR INLISTING YOUR`SELF FOR THE HUNT
ALL TO GETHER WE HAVE MORE THEN 18 HUNTERS
ANY MORE WANTING TO JOIN PLEASE DO SO
THERE IS A LITTLE NEWS FOR YOU ALL

THE BLOODY FOX HAS BECOME SMARTER
AND IS MORE DIFFICULT TO HUNT
BUT WE WILL GET HIM
WE THIUGHT THAT WITH JUST YOUR HANDIES AND OUR CLUB ANTENNAS
WE WOULD BE ABLE TO HUNT HTE FOX BUT HE SEEMS TO BE SMART FOR US
SO WE HAVE DESCIDED TO MAKE AND EXTRA GEAR FOR HIM WHICH I CAN ONLY MENTION
TO YOU WHAT IT IS IF YOU CALL ME ON 9821025289 AT THE EARLIEST
IF I MENTIONIT ON THE NET HELL COME TO KNOW AND BECOME MORE SMARTER
SO PLEASE CALL ME FAST ALL THOSE WHO HAVE LISTED FOR THE HUNT
THE TEAMS WILL BE DESCIDED SOON ALSO

WE WILL GET THE FOX FOR THE FIRST TIME IN MUMBAI

REMEMER WE ARE THE PIUONEER FOX HUNTERS IN MUMBAI INT HIS ERA

DEAR FOX HUNTER
THANK YOU FOR INLISTING YOUR`SELF FOR THE HUNT
ALL TO GETHER WE HAVE MORE THEN 18 HUNTERS
ANY MORE WANTING TO JOIN PLEASE DO SO
THERE IS A LITTLE NEWS FOR YOU ALL

THE BLOODY FOX HAS BECOME SMARTER
AND IS MORE DIFFICULT TO HUNT
BUT WE WILL GET HIM
WE THIUGHT THAT WITH JUST YOUR HANDIES AND OUR CLUB ANTENNAS
WE WOULD BE ABLE TO HUNT HTE FOX BUT HE SEEMS TO BE SMART FOR US
SO WE HAVE DESCIDED TO MAKE AND EXTRA GEAR FOR HIM WHICH I CAN ONLY MENTION
TO YOU WHAT IT IS IF YOU CALL ME ON 9821025289 AT THE EARLIEST
IF I MENTIONIT ON THE NET HELL COME TO KNOW AND BECOME MORE SMARTER
SO PLEASE CALL ME FAST ALL THOSE WHO HAVE LISTED FOR THE HUNT
THE TEAMS WILL BE DESCIDED SOON ALSO

WE WILL GET THE FOX FOR THE FIRST TIME IN MUMBAI

REMEMER WE ARE THE PIUONEER FOX HUNTERS IN MUMBAI INT HIS ERA

BYE CALL ME
ZYROS

***************
The ARRL Letter
Vol. 21, No. 01
January 4, 2002
***************

IN THIS EDITION:

* +ARRL mulling Congressional action on CC&Rs
* +New Hampshire Supreme Court decision favors PRB-1
* +AO-40 enters dark period
* +FCC seeks help in peculiar interference case
* +Mitnick's ham ticket designated for renewal hearing
* +Badger State Smoke Signals Editor Jim Romelfanger, K9ZZ, SK
* +Rhode Island Section Manager Armand Lambert, K1FLD, SK
* Solar Update
* IN BRIEF:
This weekend on the radio
Amateur Radio Emergency Communications Course January registration
Question pools to remain valid for four years
New Zealand amateur LF signal heard in Nova Scotia!
Almost--but not quite--2 million cards in 2001
Cards invited for soon-to-be-nonagenarian New Zealand ham
Guantanamo Bay QSL bureau closes
Spark gap signal heard for hundreds of miles
Standardized list applies only to ARRL Club Competition participants

+Available on ARRL Audio News

==========================================================

==>FCC DENIAL LEAVES LEAGUE EYEING CONGRESSIONAL ACTION ON DEED RESTRICTIONS

The ARRL got the proverbial lump of coal in its stocking in late December,
but it wasn't from Santa. The FCC affirmed a November 2000 staff-level
decision that declined to include privately imposed deed covenants,
conditions and restrictions--CC&Rs--under the limited federal preemption
known as PRB-1. That policy requires municipalities to "reasonably
accommodate" amateur communication in antenna-related zoning and regulation.

The ARRL a year ago appealed to have the full FCC review the earlier denial.
The Commission turned down the League's Application for Review December 18
in a Memorandum Opinion and Order released December 26.

"There has not been a sufficient showing that CC&Rs prevent Amateur Radio
operators from pursuing the basis and purpose of the Amateur Service," the
FCC said. The Commission said hams still can get on the air without
```

installing residential antenna systems by operating away from home, while mobile or at club stations.

The FCC said it recognizes the importance of preserving the integrity of contractual relations that CC&Rs represent. It asserted that the ARRL had submitted no specific evidence that would persuade it to abandon its long-standing policy of excluding CC&Rs from PRB-1.

ARRL President Jim Haynie, W5JBP, expressed disappointment in the Commission's ruling. "The biggest problem Amateur Radio operators face today is being able to put up an antenna," Haynie said. "Our only approach now is to get a bill into Congress."

The FCC itself even hinted that Congressional action ought to be a next logical step. "However, should Congress see fit to enact a statutory directive mandating the expansion of our reasonable accommodation policy," the FCC declared in its MO&O, "the Commission would expeditiously act to fulfill its obligation thereunder."

Haynie conceded that extending PRB-1 protection to CC&Rs would be "a tough sell" to members of Congress. He noted, however, that it's getting more difficult all the time for amateurs to find desirable housing that does not come with deed covenants and restrictions. "It's extremely serious for the amateur community, because it restricts what hams will be able to do in the future," he said.

The topic is likely to be the focus of additional discussion at this month's meeting of the ARRL Board of Directors.

In its Application for Review in late 2000, the ARRL maintained that the FCC should have the same interest in the effective performance of an Amateur Radio station and in the promotion of amateur communications regardless of whether the licensee's property is publicly regulated or privately governed by homeowners' associations and their architectural control committees.

A copy of the FCC's Memorandum Opinion & Order in RM-8763 is available on the FCC Web site <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-01-372A1.doc>.

==>NEW HAMPSHIRE ANTENNA DECISION UPHOLDS PRB-1

A New Hampshire ham appears to have won a battle to erect an antenna support structure on his property. It remains to be seen, however, whether Jerry Muller, K0TV, of Hudson will be allowed to erect the extensive system of towers that he'd originally planned. In a 4-0 vote, with one justice abstaining, the Supreme Court of New Hampshire reversed a lower court ruling that ordered Muller, an ARRL Life Member, to dismantle the three towers he had erected on part of his six-acre residential tract.

Writing for the court in Marchand v. Town of Hudson, New Hampshire Chief Justice David A. Brock concluded that the lower court's order requiring Muller to dismantle his towers violated the limited federal preemption known as PRB-1 as well as New Hampshire's statutory codification of PRB-1. "In

light of the FCC's clear directive, we agree that the superior court erred when it ordered the towers removed," Brock stated in a ruling issued December 31, 2001. The Supreme Court ruling vacates the dismantling order and sends the matter back to the town's zoning board of adjustment for consideration in light of PRB-1.

ARRL New England Division Vice Director and Volunteer Counsel Mike Raisbeck, K1TWF, represented Muller in written and oral arguments before the New Hampshire Supreme Court. ARRL General Counsel Chris Imlay, W3KD, also filed an amicus brief on ARRL's behalf.

Unlike many amateur antenna battles, this case did not pit Muller against the town. In December 1998, Muller applied for a permit to erect three 100-foot antenna structures on his property, and the Town of Hudson granted the permit. Three of Muller's neighbors appealed the grant of the permit, but the Hudson ZBA affirmed the grant. The neighbors then sued the town and won, resulting in the order for Muller to dismantle that's now been vacated.

While Muller has won the right to get on the air in some capacity, he will still have to make a case for his proposed three-tower installation. Brock agreed with the lower court that Muller's three-tower installation did not qualify as a "customary, incidental and subordinate" accessory use permitted by Hudson's ordinance. Another amateur in Hudson has a tower at the same height, but there are no instances of three such towers on the same property. Raisbeck explained that New Hampshire's accessory use statute relies on the prevailing local, not statewide, standard.

Nevertheless, Brock said that Muller's installation may be permitted within the framework of PRB-1, if Muller can demonstrate that his three towers are necessary to "reasonably accommodate" his communications needs.

Thirteen states have incorporated PRB-1 into their statutes. The full text of the New Hampshire Supreme Court decision is available on the Court's Web site <http://www.state.nh.us/courts/supreme/opinions/0112/march221.htm>.

==>AO-40 "OFFICIALLY IN THE 'DEAD ZONE'"

AO-40 satellite ground controllers have begun adjusting the spacecraft's attitude as it enters a period of unfavorable sun angles. AO-40 command station team member Stacey Mills, W4SM, says that AO-40's operating schedule has been modified slightly to reflect the decreasing attitude longitude (ALON).

"As expected, the satellite has lost sun sensor lock, so we are now officially in the 'dead zone'," Mills reported. The satellite is currently in a long period during which Earth eclipses the sun near perigee--its point closest to Earth. These periods will continue well into next June.

The satellite relies on solar panels for its power. In late November, Mills said that necessary adjustments to AO-40's attitude to compensate for unfavorable sun angles over the next several months would lead to some down time for the spacecraft's transponders. The attitude shifting necessary to

compensate for the unfavorable sun angle will leave AO-40's antennas pointing away from Earth for several weeks.

To save power, the transponder passbands were being turned off at various times, and the RUDAK digital transponder was scheduled to be off for up to five days.

Mills has said there will be periods of no transponder activity and a much longer period of limited--but progressively increasing--transponder activity. "AO-40 command stations will make every effort to activate AO-40's transponders, even if for only a short time each orbit, when conditions are appropriate," he said. Mills said he anticipated being able to keep the transponders active through the eclipse period for an hour or so right after perigee.

Yoshi Takeyasu, JA6XKQ, of the JAMSAT SCOPE team, recently announced the release of several new photos taken by the SCOPE cameras aboard AO-40. The photos are available on the JAMSAT Web site <http://www.jamsat.or.jp/scope/011215/>.

For more information on AO-40, visit the AMSAT-NA Web site <http://www.amsat.org/>.

==>FCC ASKS BROADCASTER, POWER COMPANY TO HELP CURE WEIRD INTERFERENCE

The FCC has written a Cincinnati AM radio station and the electric utility serving that region to help resolve an unusual and longstanding interference situation affecting local amateurs. Sharon Bowers of the FCC's Consumer Information Bureau in December wrote Clear Channel-owned WLW and Cinergy Corp citing numerous reports of apparently spurious signals associated with WLW transmissions that have been monitored over a wide area and frequency range.

"Many of these reports indicate that, although the noise is associated with WLW transmissions, the strongest signals appear to be originating some distance from the WLW transmitter site, possibly on a high-voltage tower owned by Cinergy Corp," Bowers wrote. The FCC said the circumstances suggest that multiple sources of interference are involved. According to the FCC database, WLW operates on 700 kHz with 50,000 W into a single, top-loaded half-wave vertical tower.

One of the amateurs affected--Bob Reiff, WA8ULW, of Mason, where WLW's tower is sited--said that while the noise is most noticeable on 160 meters, it's showing up elsewhere. "It is pervasive in the spectrum," Reiff told ARRL, "and, we suspect, it is causing us problems even on our 2-meter repeater."

The FCC said that Reiff and the other complainants attempted unsuccessfully for the past two years to work with WLW and Cinergy.

Bowers noted that WLW and Cinergy already have "expended considerable efforts" to locate the noise source and cause, but the noise remained "as strong as ever according to recent reports." She noted that the noise became intermittent after some recent work done on a Cinergy high-voltage tower,

and she expressed the FCC's appreciation for the cooperation to date. But, Bowers admonished, the FCC expects the responsible party to address any reports causing harmful interference to a licensed radio service.

"While the Commission recognizes that this is an unusual case, and the source could turn out to be something unexpected," Bowers wrote, "the Commission is turning to the radio station and electric utility company, asking for your help and cooperation in finding the source of the noise."

Ohio ARRL Section Manager Joe Phillips, K8QOE, credited the activities of the Greater Cincinnati Local Interference Committee with helping to bring the interference case to the FCC's attention.

==>FCC DESIGNATES COMPUTER HACKER'S HAM TICKET RENEWAL FOR HEARING

Citing character issues, the FCC has designated for hearing the Amateur Radio license renewal application of convicted computer hacker Kevin D. Mitnick, N6NHG. Mitnick's history of illegal computer-related activity--which includes several convictions and prison sentences--dates back more than a decade. Not long after his latest US District Court conviction in August 1999, Mitnick filed with the FCC to renew his General ticket.

"Mr. Mitnick's criminal background raises a substantial and material question of whether he possesses the requisite character qualifications to be and remain a Commission licensee," the FCC said in a Hearing Designation Order released December 21. "Given his propensity to engage in criminal activities, particularly those involving fraud, we have serious reservations about Mr. Mitnick's ability to comply with our rules and regulations in the future."

Mitnick, 38, has been licensed for about 25 years. In 1999, Mitnick was sentenced to 46 months in federal prison, the FCC said, after pleading guilty to wire fraud, computer fraud and illegally intercepting a wire communication--all felonies. Prior to that, the FCC Order stated, he'd received a 22-month term for possessing cloned cell phones and for violating his supervised release after a 1989 conviction for computer fraud. He's currently on probation following his January 2001 release from federal prison.

This is not the first time that the FCC has attempted to apply character issues to a ham radio license renewal case. In designating Mitnick's license renewal for hearing, the FCC invoked the case of Herbert Schoenbohm, ex-KV4FZ, whose lengthy efforts to renew his amateur license were scuttled on the basis of character issues that, in part, stemmed from a 1992 federal fraud conviction.

The Order also referenced the case of Leslie Brewer, ex-KC4HAZ, whose license was revoked and a fine levied last year after the FCC said he lacked the basic character qualifications to be and remain a Commission licensee on the basis of his "pirate radio and other unlawful activities."

Mitnick's license expired December 12, 1999, but he may continue to operate until action is taken on his renewal application. The FCC's Order is available on the FCC Web site <http://www.fcc.gov/Daily_Releases/Daily_Business/2001/db1221/fcc01359.doc>.

==>BADGER STATE SMOKE SIGNALS EDITOR JIM ROMELFANGER, K9ZZ, SK

A voice for Amateur Radio in Wisconsin has gone silent. Jim Romelfanger, K9ZZ, of Baraboo, died December 22 at his home after suffering an apparent heart attack. He was 60. An ARRL Life Member, Romelfanger had served as Wisconsin's Public Information Coordinator. He also was the editor of the Badger State Smoke Signals, a Wisconsin Amateur Radio newspaper.

K9ZZ was a prime mover behind the annual Circus World Museum Circus Train Amateur Radio special event each summer and a guiding force in efforts to see a ham radio antenna bill enacted in Wisconsin.

"Jim was a force in Wisconsin Amateur Radio for many years, and he will be missed," said ARRL Wisconsin Section Manager Don Michalski, W9IXG.

A polio patient as a youngster in the mid-1950s, Romelfanger was first licensed in 1958 as KN6LWB, later K6LWB, on the West Coast. He became K9PKQ after moving back to his native Wisconsin and later obtained K9ZZ via the vanity call sign program. Romelfanger was a charter member of the Yellow Thunder Amateur Radio Club.

An ARRL member for 40 years, Romelfanger was a contributor to various Amateur Radio publications, including QST, CQ and Popular Electronics, the ARRL Web site, and The ARRL Letter.

In addition to his Amateur Radio-related activities, Romelfanger edited the monthly newsletter of the Sauk County chapter of Wisconsin Right to Life. An accomplished photographer, his photos appeared in the Baraboo News Republic and the Wisconsin State Journal. He also once worked at the Badger Army Ammunition Plant and later participated in the filming of a documentary on the facility, which has been shut down.

He enjoyed a radio career at stations in Nebraska and Wisconsin. In his later years he appeared in a television ad campaign for HIS jeans and was an extra in the Julia Roberts-Nick Nolte film I Love Trouble. Among his friends he counted Dean Torrance of the surfing music duo Jan and Dean.

A service was held December 28. Memorial gifts are invited to the St Vincent DePaul Society, the American Heart Association, the Wisconsin State Historical Society, Wisconsin Right to Life or mass offerings.

==>RHODE ISLAND SECTION MANAGER ARMAND LAMBERT, K1FLD, SK

Rhode Island ARRL Section Manager Armand E. Lambert, K1FLD, died December 31, 2001, at his home in Woonsocket following a lengthy illness. He was 58.

"Armand was one of the nicest people I've ever met, and he was a steady hand as Rhode Island Section Manager," said New England Division Director Tom Frenaye, K1KI. "He was someone who really left the world better as a result

of his efforts."

In 1999, Lambert outpolled two other candidates to succeed Rick Fairweather, K1KYI, who did not run for another term. He also had served as an ARRL VEC volunteer examiner. An ARRL member, Lambert was a regular participant in the New England Division cabinet meetings and, on Field Day, he made it a practice to visit as many sites in Rhode Island as possible. He also was president of the Blackstone Valley Amateur Radio Club.

Lambert's wife, Simone, KA1YVF, reported that Armand had suffered a recurrence of kidney cancer nine weeks ago which was untreatable and that he passed on peacefully on New Year's Eve. She also thanked all who had sent expressions of support. "You made Armand's transition one of love," she said.

A memorial service will be held Saturday, January 12, 2:30 PM at Lafayette Masonic Temple Lodge, Nate Whipple Highway, Arnold Mills, Cumberland, Rhode Island. Part of the service will be a time for stories, and she asked those unable to attend to share their memories via e-mail <simlamb@...> for reading at the service.

Simone Lambert invited memorial donations in lieu of flowers to Rhode Island Satsang Society Inc, ECKANKAR, Religion of the Light and Sound of God, 2914 Post Road--Unit #3, Warwick, RI 02886-3168.

A successor as Rhode Island's SM will be appointed to complete Lambert's term of office.

==>SOLAR UPDATE

Heliophile Tad Cook, K7VVV, Seattle, Washington, reports: Happy new year! Because this is the first bulletin of the new year, we'll spend some time reviewing last year.

If we look at the average daily solar flux and sunspot numbers for 2001, it was really a very good year with lots of activity, considering that the peak was supposed to be in 2000. Average daily sunspot numbers for the years 1997-2001 were 30.7, 88.5, 136.3, 172.8 and 170.3. Average daily solar flux values for those same years were 81, 117.7, 153.7, 179.5 and 181.6. Given those numbers, both 2000 and 2001 look like peak years for the cycle.

Average quarterly sunspot numbers for 2001 were 147.3, 164.8, 170.4 and 198.1. Average quarterly solar flux for the same period was 164.4, 166.7, 175.5 and 219.1, so solar activity increased over the year.

Over the past week, average sunspot numbers were up 13 points, and average solar flux was about the same. Sunday had unsettled geomagnetic conditions, probably from a flare on Friday. Friday's flare upset the 10.7-cm receiver at the Penticton observatory, which read a solar flux of 655.6 for the day. This was adjusted downward by NOAA SESC to 263.

Predicted solar flux for Friday through Monday is 220, 215, 210 and 210.

Sunspot numbers for December 20 through 26 were 171, 215, 234, 220, 176, 246 and 290, with a mean of 221.7. The 10.7-cm flux was 221.1, 234.3, 242.8, 254.6, 274.5, 258.8 and 267.8, with a mean of 250.6. Estimated planetary A indices were 5, 11, 8, 7, 19, 8 and 7, with a mean of 9.3.

Sunspot numbers for December 27 through January 2 were 268, 263, 222, 218, 209, 222 and 241, with a mean of 234.7. The 10.7-cm flux was 274.6, 263, 264.4, 246.6, 245.6, 232.2 and 231.1, with a mean of 251.1. Estimated planetary A indices were 6, 5, 10, 17, 11, 7 and 7, with a mean of 9.

==>IN BRIEF:

* This weekend on the radio: The ARRL RTTY Roundup, Kid's Day, and the AGCW QRP Winter Contest are the weekend of January 5-6. JUST AHEAD: The North American QSO Party (CW), the Japan International DX Contest, Hunting Lions in the Air, Midwinter Contest (CW and SSB), the NRAU-Baltic Contest (CW and SSB), and the DARC 10-Meter Contest are the weekend of January 12-13. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and the WA7BNM Contest Calendar, <http://www.hornucopia.com/contestcal/index.html> for more info.

* Amateur Radio Emergency Communications Course January registration: Registration for the Level I Amateur Radio Emergency Communications Course (EC-001) will open Monday, January 7, 2002, at 4 PM Eastern Time. Registration for Level II (EC-002) will open on Monday, January 14; registration for Level III (EC-003) will open January 21. Courses must be completed in order, starting with Level I. To learn more, visit the ARRL Certification and Continuing Education Web page <http://www.arrl.org/cce> and the C-CE Links found there. For more information, contact Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* Question pools to remain valid for four years: The Question Pool Committee of the National Conference of Volunteer Examiner Coordinators has announced that starting with the new Amateur Extra (Element 4) question pool released November 30 and going into effect this July 1, all question pools will be valid for four years. QPC Chairman Scotty Neustadter, W4WW, says the shift from a three to a four-year schedule will enable the QPC to do a better job in developing syllabi and pools for the various examination elements and allow more opportunities for public input.

* New Zealand amateur LF signal heard in Nova Scotia! Another new low-frequency distance record is being claimed. New Zealand DX tests coordinator Bob Vernall, ZL2CA, reports that on December 15, John Currie, VE1ZJ, in Canada, managed to receive and positively identify 136-kHz signals from ZL6QH, in New Zealand. ZL6QH, the Quartz Hill club station, is run by the Wellington Amateur Radio Club. The path from ZL6QH near Wellington to VE1ZJ in Sydney, Nova Scotia, has been calculated at 15,645 km--around 9700 miles. VE1ZJ detected the ZL6QH transmission using a PC and ARGO DSP software. An Amateur Radio LF signal spanned the Pacific for the first time on June 30, 2001, when Steve McDonald, VE7SL, of British Columbia, Canada, detected a 184-kHz signal from ZL6QH. The feat was repeated in September.

Vernall said the next test from ZL6QH in the 136-kHz band likely would occur in mid-January. The ARRL has petitioned the FCC to authorize Amateur Radio allocations at 136 kHz and in the 160-190 kHz band. The petition is pending.

* Almost--but not quite--2 million cards in 2001: ARRL QSL Service Manager Martin Cook, N1FOC, reports that the final shipment of 138,925 QSL cards on December 31, 2001, brought the total for the year to 1,932,315 cards. "This is 63,420 more than last year," Cook said. The upswing in the number of QSL cards handled via the outgoing QSL service over the past couple of years has roughly corresponded with the current solar cycle peak.

* Cards invited for soon-to-be-nonagenarian New Zealand ham: The daughter of a New Zealander who might just be that country's oldest active amateur has invited hams to send birthday greetings to her dad. Len Hopkinson, ZL3IE, will turn 90 on January 14. His daughter, Noeline Sapwell, says he's been a ham since 1925. "He is still active daily on the air even though he is nearly blind and can no longer attend the local radio club," she told ARRL. "What I would love for Dad for his 90th birthday is to receive some cards from hams from all around the world wishing him a happy 90th birthday. I know it will definitely bring great joy to Dad." Cards go to Len G. Hopkinson, ZL3IE, 17 Andrew St, Timaru 8601, New Zealand.

* Guantanamo Bay QSL bureau closes: The QSL bureau for KG4 two-letter suffix call signs in Guantanamo Bay, Cuba, has been closed. All operations from "Gitmo" should specify QSL manager information.

* Spark gap signal heard for hundreds of miles: David Wilson, VE3BBN, reports his commemorative spark gap transmissions December 12 to celebrate the 100th anniversary of Marconi's 1901 transatlantic experiments were heard hundreds of miles away. Wilson, who lives near Niagara Falls, Ontario, built a low-power rotary spark transmitter and secured permission from Industry Canada (that country's FCC equivalent) to use it briefly on 80 meters. He transmitted "MARCONI S" twice a minute and said he got more than 450 reports but estimated that only about 60 of them were valid. "The best distance was Kansas City," he said--some 850 miles away. He noted that the majority of the reports were in the 200 to 400-mile range. Additional information, photos and audio of what his transmitter sounds like are available on the "Spark Gap Transmitter Signals for Marconi Centennial" Web site <http://www.qsl.net/g4rfr/marconi.htm>.

* Standardized list applies only to ARRL Club Competition participants: ARRL Contest Branch Manager Dan Henderson, N1ND, notes that the recently announced list of club abbreviations that appears on the ARRL Web site <http://www.arrl.org/contests/club-list.html> is only for the convenience of operators whose clubs typically participate in the ARRL November Sweepstakes, the ARRL International DX Contest, the ARRL 160-Meter Contest, the ARRL 10-Meter Contest and the ARRL-sponsored VHF events in January and September. Points for these contests count toward the club competition totals. Field Day participation, while appreciated, does not count toward the ARRL Affiliated Club Competition program. It is not necessary for clubs that only participate in Field Day to be shown on the club list. The

standardized list of club designators enables the ARRL contest robot to properly count electronically submitted contest scores toward a club's ARRL Affiliated Club Competition point total.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; http://www.arrl.org. Jim Haynie, W5JBP, President

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb at http://www.arrl.org for the latest news, updated as it happens. The ARRLWeb Extra at http://www.arrl.org/members-only/extra offers ARRL members access to informative features and columns.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe

letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Vol 02, No 01
January' 2001
****
In this Monthly Edition :-
FEATURE :
a.. SSTV
Slow Scan TV (SSTV) is a transmission method for sending images via the airwaves. These image types could be GIF, JPG, BMP or similiar depending on the computer software used for the SSTV transmissions.
It works similiar to Facsimile transmissions. Each colour has it's own frequency in SSTV mode and the software simply codes the colour into an audible frequency tone that can be interfaced into the microphone system of the radio. The receiving end software simply decodes the frequency tone back into the colur.
In fact, an SSTV signal can be recorded onto an audiotape and then played back and decoded. Any number of people can simulatenously decode a single SSTV transmission, just like 1000's of people can listen to the same radio station at the same time or watch the same television channel.
SSTV is a relatively fast method of transmission, each transmission burst of SSTV lasts about 30 seconds irrespective of file size.
-- Information contributed by John - VK3TVZ

An in-depth study of SSTV modes would take a lot more room than we have here, but in general terms, there are several "families" of SSTV modes, each with different characteristics. Each mode family has a number of "sub-modes", that normally differ in the length of the transmission time. Again in general, the longer it takes to transmit a picture, the better the results will be. In the US, for example, "Scottie 1" has become the most common SSTV mode, with a transmission time of ~112 seconds. When short transmission times are more important than quality, (like during an HF SSTV net) SSTV pictures will often be replayed in Scottie 2, which takes only ~72 seconds. Click here to see the pictures showing the differences between SSTV modes.

a.. ATV
There are basically two methods used to send pictures over ham radio. Fast Scan TV is very

similar to broadcast TV: full motion color images. This requires a few megahertz of bandwidth so it is used only on UHF. A single transmission is wider than the entire 2 meter ham band. The other method is Slow Scan TV: still images sent through voice transceivers over a period of a few seconds to a couple minutes. Early pictures were low resolution black and white. Now nearly all images are higher resolution color. You'd expect the term Amateur Television to apply to both Fast Scan and Slow Scan but it generally means only Fast Scan TV.

============================================================

==>FCC INVITES COMMENTS ON FOUR AMATEUR RADIO PETITIONS

The FCC is seeking comments on four Amateur Radio rule making petitions
filed recently and put on public notice this week. Comments are due by
February 7, 2002, in petitions seeking to legally separate wideband and
narrowband modes on 160 meters; to allow hams to bequeath their call signs
"in memoriam" to a specific club; to expand HF operating privileges for
Novice and Tech Plus operators; and to permit retransmission on amateur
frequencies of NASA manned spacecraft communications.

A proposal from veteran Top Band operators and contesters Bill Tippett,
W4ZV, and Jeff Briggs, K1ZM, asks the FCC to subdivide 160 meters into
mode-specific subbands. The petition, submitted to the FCC last September,
has been designated as RM-10352. Tippett and Briggs contend that the ARRL
band plan for 160 meters--modified last year after lengthy consideration by
the ad hoc ARRL 160-Meter Band Plan Committee on which both men sat--does
not go far enough and is unenforceable. They want the FCC to prohibit SSB,
AM and other wideband modes below 1.843 MHz--something the revised ARRL band
```

plan <http://www.arrl.org/FandES/field/regulations/bandplan.html#160m> already recommends.

A copy of Briggs' book, DXing on the Edge--The Thrill of 160 Meters, accompanied their 18-page petition to the FCC. The book is published by ARRL <http://www.arrl.org/catalog/6354/>. Tippett and Briggs made it clear that while the topic of their petition did arise during the ARRL committee's deliberations, their petition is an independent effort with no connection to the committee or the ARRL.

The Quarter Century Wireless Association (QCWA) has asked the FCC to change its amateur vanity call sign system rules to permit individual amateurs to, in effect, will a call sign to a designated club as an "in memoriam" call sign. The FCC has designated the petition, submitted in December, as RM-10353. The QCWA notes that the current vanity rule "excludes current licensees from speaking for themselves" while they're still alive and "requires their relatives to speak for them post mortem."

Novice licensee John S. Rippey, W3ULS, has petitioned the FCC to expand HF phone and CW privileges for Novice and Technician (with Element 1 credit) operators. The FCC has designated the petition, submitted in December, as RM-10354. Rippey held a General ticket in the 1950s and 1960s and got his former call sign back after relicensing as a Novice in 1999. He argues, among other things, that "the HF operating privileges authorized today for a Novice or Technician Plus license fall far short of providing adequate value." Rippey has asked the FCC to grant Novice and Technician (with Element 1 credit) licensees new or expanded operating privileges on 80, 40, 30, 17, 15, 12 and 10 meters. His suggestions include SSB privileges for Novices and Tech Plus licensees on 17 and 12 meters.

The NASA John H. Glenn Research Center Amateur Radio Club is seeking a modification in wording to the Part 97 rule that already permits amateur retransmission of NASA manned shuttle communications. The petition has been designated as RM-10355. The club wants the Amateur Service rule, Sec 97.113(e), to include International Space Station communications as well as any manned spacecraft in the future.

Interested parties may comment on any or all of these petitions via the FCC's Electronic Comment Filing System <http://www.fcc.gov/e-file/ecfs.html>.

==>FCC ACTS ON OCTOBER 15, 2001, VANITY APPLICATIONS

The vanity call sign logjam has begun to break up. The FCC granted 27 vanity call signs January 9, based on applications received last October 15. Prior to this week, the FCC had not issued any new vanity call signs since October 30.

FCC policy gives paper and electronically filed vanity applications equal priority. Mail problems due to the recent anthrax scare delayed some applications filed on paper and sent to Washington, DC, for decontamination. As a result, vanity processing has been on hold since last fall.

FCC Licensing Branch personnel recently have been attempting to obtain new paperwork from applicants, however. All vanity fee payments have been recorded and deposited or charged to credit card holders' accounts. The FCC has been using vanity fee payment data from the FCC's fiscal agent, Mellon Bank in Pittsburgh to contact applicants directly to have them resubmit their applications.

The FCC has a record of when it receives all vanity applications. Once the Commission has all paper and electronic applications for a given date, all submittals will be processed in chronological order.

In mid-November, the Gettysburg office began diverting mail addressed to its 1270 Fairfield Road location to another site in town for special handling, and decontamination now is being handled locally. Since October 19, the FCC has been urging all of its customers to avoid using the mails to conduct business with the agency and to use electronic means to file comments or applications.

The FCC has been acting on amateur renewals and administrative updates filed on-line via the Wireless Telecommunications Bureau's Universal Licensing System. As of December 3, all applicants must include an FCC Registration Number (FRN) when filing.

==>NEW ISS AMATEUR RADIO ANTENNA TO BE INSTALLED DURING SPACEWALK

Amateur Radio on the International Space Station Board Chairman Frank Bauer, KA3HDO, has announced that one of the four new ARISS antennas will be installed during a scheduled January 14 spacewalk--or EVA. Two crew members will attach the "WA3" model VHF-UHF flexible tape antenna on one end of the ISS Service Module.

"The Russian team is able to deploy this particular antenna sooner than the others because it is located very close to where the four RF connections go into the Service Module," Bauer said.

Expedition Four Commander Yuri Onufrienko, RK3DUO, and flight engineers Carl Walz, KC5TIE, and Dan Bursch, KD5PNU, are beginning their second month in orbit aboard the ISS. They have not yet been active on Amateur Radio, although several ARISS school contacts are pending. Onufrienko and Walz will carry out the EVA. NASA says the two will move a Russian cargo crane to the Russian Functional Cargo Block--or Zarya--for future assembly work. According to NASA, Bursch will operate the Canadarm2 robotic arm from inside the space station "and act as spacewalk choreographer."

Installation of the new antenna on the Service Module paves the way for two separate ham stations aboard Space Station Alpha. Plans call for one station to remain in the Functional Cargo Block using the Russian antennas that had been used to dock the FGB but are now used for ARISS. A second station will be set up in the Service Module--or Zvezda--using the new antenna.

"The installation of this first antenna on the outside of Zvezda will allow the crew to set up ham radio equipment in their living quarters," said Bauer, who's also chief of the Guidance, Navigation and Control Center at

NASA's Goddard Space Flight Center Maryland. The initial station ham gear was installed aboard the Zarya module because that module went into space first.

"The Zarya location worked well," Bauer said, "but this new setup is much more comfortable and convenient and should allow for more contact between the crew and Amateur Radio operators and schools on Earth." The other three antennas will be installed later this year.--ARISS; NASA

==>FCC REALLOCATION RETAINS AMATEUR RADIO'S 219-220 MHZ SLOT

Amateur Radio's secondary allocation at 219-220 MHz remains intact in the wake of an FCC spectrum reallocation of the 216 to 220-MHz band, among others. The FCC declined, however, to go along with ARRL's request to expand amateur access to 216 to 220 MHz. On a brighter note, the Commission potentially relieved spectrum competition for Amateur Radio at 2.3 GHz by making space available elsewhere.

The FCC acted December 21, 2001, in ET Docket 00-221 and in several other proceedings that it lumped into a single Report and Order and Memorandum Opinion and Order released January 2, 2002. The FCC Order reallocated 27 MHz of spectrum in seven bands from government to non-government use. Some of the spectrum will be put up for bid in public auctions. The Commission allocated the 216-220 MHz band to the fixed and mobile services (co-primary), although some government systems in the band will remain.

"We are pleased that the FCC has found suitable spectrum for MicroTrax and AeroAstro other than at 2300-2305 MHz," ARRL Executive Vice President David Sumner, K1ZZ, referring to two commercial competitors. "We hope this will clear the way for an upgrade to primary status at 2300-2305 MHz for the Amateur Service."

MicroTrax has sought access to 2300 to 2305 MHz and other bands for a proposed Personal Location and Monitoring System to enable tracking of people and objects. AeroAstro has proposed sharing the band with amateurs on a co-primary basis for its Satellite Enabled Notification System global messaging system. Both indicated interest in the 1670-1675-MHz band; MicroTrax also has said that 2385-2390 MHz might be a good fit. The FCC also noted comments from ArrayCom that the 1670-1675-MHz band would be suitable for its i-BURST high-speed data system, now operating experimentally at 2.3 GHz.

Sumner was less enthusiastic about the FCC's action at 216-220 MHz as it impacts the Amateur Service. "While the limited secondary allocation to the Amateur Service at 219-220 MHz is being maintained, the more intensive use of 216-220 MHz by commercial services is likely to preclude amateur use of the band in many parts of the country," he commented.

The amateur allocation at 219-220 MHz is secondary to the Automated Maritime Telecommunications System (AMTS). Within the 1 MHz of spectrum, Amateurs may install and operate point-to-point digital message-forwarding systems, but only under strict limitations that require coordination with and sometimes

approval by AMTS licensees. The ARRL had hoped to expand opportunities for point-to-point digital messaging systems, but the FCC said amateurs already have access to other bands for that purpose and denied the request.

The Order in ET Docket 00-221 is available on the FCC Web site <http://www.fcc.gov/Bureaus/Engineering_Technology/Orders/2001/fcc01382.pdf> .

==>SCHOENBOHM EFFORT TO OBTAIN NEW TICKET PROMPTS FCC HEARING ORDER

Former Amateur Radio licensee Herb Schoenbohm, ex-KV4FZ, apparently is eager to return to his favorite pastime. The FCC this week suggested that Schoenbohm, who lives in Kingshill, Virgin Islands, won't get his wish easily. Last April, only a few months after losing his battle to renew his ham ticket and his operating authority had expired, Schoenbohm applied for a new Amateur Radio license and passed the General exam. The FCC now has designated that pending application for hearing, to determine, in part, if Schoenbohm is rehabilitated and deserves to be a Commission licensee.

The FCC didn't mince words in its Hearing Designation Order, released January 6 in WT Docket No 01-352. Schoenbohm's "previous criminal behavior, misrepresentation and lack of candor warranted denial of his renewal application," the Order said. "Mr. Schoenbohm is a convicted felon and was found to have misrepresented facts and lacked candor in his testimony in that hearing."

The FCC said, however, that what's past is past, and it does not intend to rehash Schoenbohm's earlier case in the current proceeding. Now, the Commission says, it must determine whether Schoenbohm "has been sufficiently rehabilitated" since his earlier "disqualifying behavior." The Commission said it needs to know if Schoenbohm "could be relied upon to observe our rules and policies and deal with the Commission in an honest and forthright manner."

The FCC said that since it has "no facts now before us that would support a finding of rehabilitation," it cannot make a ready determination that granting Schoenbohm's application "would serve the public interest, convenience, and necessity." So, it's designating his application for hearing.

"Absent a demonstration by Mr. Schoenbohm that he now possesses the requisite character qualifications to be a Commission licensee, his pending applications may not be granted," the FCC added. Schoenbohm vowed last year to return to Amateur Radio.

The FCC, meanwhile, is continuing to investigate whether a South Carolina amateur broke any rules when he let Schoenbohm operate during a recent contest. Stephen S. Reichlyn, AA4V, rented and operated from Schoenbohm's station during the CQ World Wide SSB Contest last October.

The FCC said this week that Schoenbohm would bear the burden of proof in the new license application proceeding before an administrative law judge. The

hearing would determine whether he possesses the requisite character qualifications to be a Commission licensee and whether his application should be granted.

Schoenbohm has 20 days to respond to the Order or his application will be denied with prejudice. A copy of the FCC Order is available on the FCC Web site <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-01-392A1.doc>.

==>NEW UK FOUNDATION LICENSE PROVIDES HF ACCESS VIA "MORSE ASSESSMENT"

A new class of Amateur Radio license in the United Kingdom will make the HF bands much more accessible to newcomers as well as to Class B VHF-only "no code" licensees. The new Foundation license, which became effective January 1, does not require a specific Morse code examination. Instead, applicants must pass a short test and complete what's called a "Morse assessment." According to the Radio Society of Great Britain (RSGB), 600 of the new licenses were issued the first week.

The new license provides holders with access to most bands from 136 kHz through 440 MHz--with the notable exception of 10 meters--using CW, SSB, or digital modes. Foundation licensees may operate with 10 W output using only commercially manufactured equipment or "properly designed" commercial kits. Licensees will be issued call signs from the M3AAA-M3ZZZ series. The new license scheme followed discussions between the RSGB and the Radiocommunications Agency, or RA--the United Kingdom's telecommunications regulatory agency. The new ticket also is available to residents of the Channel Islands and the Isle of Man.

Current UK Class B licensees who have held that ticket for at least a year may obtain a Foundation license simply by taking the Morse assessment. There is no Morse speed requirement, and applicants are provided with a copy of the Morse alphabet and "coding" and "decoding" information sheets. The RSGB says the entire Morse assessment takes about 30 minutes.

Passing the Morse assessment will enable Class B licensees to operate on the HF bands as Foundation licensees, using their M3 call signs, while continuing to have privileges above 30 MHz under their Class B tickets.

Currently unlicensed newcomers have to complete a Foundation license training program being offered through the RSGB and pass a 20-question multiple-choice test, in addition to the Morse assessment. The class involves about 10 hours of hands-on training in safety, basic operating concepts, regulations and licensing requirements and can be completed in a weekend.

Last September, the RA reduced the Morse requirement from 12 WPM to 5 WPM for the Class A "full" license in Britain and incorporated the Class A/B license into Class A. The former Novice license has been renamed the Intermediate license, and the power limit was raised from 10 W to 50 W. The RA also has instituted an apprenticeship program in the UK that lets unlicensed trainees operate under supervision and contact other UK licensees.

More information on the new license is available on the RSGB Web site <http://www.rsgb.org>.

==>W1YRC APPOINTED RHODE ISLAND SECTION MANAGER

Robert G. "Bob" Beaudet, W1YRC, has been appointed to succeed Armand Lambert, K1FLD, as Rhode Island ARRL Section Manager. Lambert died December 31. The appointment was announced January 10 by Field and Educational Services Manager Rosalie White, K1STO. Beaudet, 63, will serve out the remainder of Lambert's term of office, which expires in June 2003.

Beaudet had been serving as an Assistant SM under Lambert and worked closely with him during his illness. An ARRL Life Member from Cumberland, Beaudet has held several League appointments in the past, including Official Observer, Net Manager and Assistant Emergency Coordinator. He now serves as an ARRL VEC volunteer examiner.

Licensed in 1953, Beaudet is an active DXer and DXCC Honor Roll member who also enjoys CW and vintage gear.

Beaudet is a charter member and board member of the Blackstone Valley Amateur Radio Club, where Lambert had served as president. He also belongs to the Richardson Wireless Klub and the Lone Star DX Association in Texas.

Members may contact Beaudet via e-mail at w1yrc@....

==>SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity has been lower over the past week. Average daily sunspot numbers during the week of January 3-9 were nearly 52 points less than the previous week, and average daily solar flux dropped by 42 points. Along with fewer sunspots there was very little geomagnetic activity--which is great for HF propagation because of lower absorption. Many periods over the past week had planetary and mid-latitude K indices of zero or one.

Solar flux probably reached a short-term minimum when it was 188.6 on Monday. Predicted solar flux for Friday through Monday is 230, 235, 240 and 245. Solar flux should peak near 260 around next Thursday or Friday, then reach another short-term minimum during the first week of February.

Did we say this week was quiet? This won't last. A high-speed stream of energy from a coronal hole is due, and the predicted planetary A index indicates a geomagnetic storm. Values for Friday through Sunday should be around 30, 20 and 15. There was also a large solar flare at 1801 UTC on Wednesday. Although it came from a sunspot near the center of the visible solar disk, the blast of energy from this flare should not bother Earth.

Sunspot numbers for January 3 through 9 were 229, 248, 201, 143, 158, 143 and 159, with a mean of 183. The 10.7-cm flux was 220.3, 218.2, 212.2, 196.6, 188.6, 199.2 and 228.5, with a mean of 209.1. Estimated planetary A indices were 3, 3, 3, 4, 7, 7 and 3, with a mean of 4.3.

==>IN BRIEF:

* This weekend on the radio: The North American QSO Party (CW), the Japan International DX Contest, Hunting Lions in the Air, Midwinter Contest (CW and SSB), the NRAU-Baltic Contest (CW and SSB), and the DARC 10-Meter Contest are the weekend of January 12-13. JUST AHEAD: The ARRL January VHF Sweepstakes, the North American QSO Party (SSB), the 070 Club PSKFest, the LZ Open Contest (CW), the MI QRP January CW Contest, are the weekend of January 19-20. The CQ 160-Meter Contest (CW) is the weekend of January 26-27. See the ARRL Contest Branch page, <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar, <http://www.hornucopia.com/contestcal/index.html> for more info.

* Amateur Radio Emergency Communications Course January registration: Registration for the Level II Amateur Radio Emergency Communications Course (EC-002) will open on Monday, January 14; registration for Level III (EC-003) will open January 21. January registration for the Level I ARRL Amateur Radio Emergency Communications Course (EC-001) is closed. February registration for Level I will open Monday, February 4. Courses must be completed in order, starting with Level I. To learn more, visit the ARRL Certification and Continuing Education Web page <http://www.arrl.org/cce> and the C-CE Links found there. For more information, contact Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* Correction: The antenna system for WLW (AM 700 kHz) in Cincinnati was described incorrectly in an article "FCC Asks Broadcaster, Power Company to Help Cure Weird Interference" in The ARRL Letter, Vol 21, No 1 (Jan 4, 2002). ARRL Michigan Section Technical Coordinator David Smith, W8YZ, points out that the WLW antenna is 189.3 electrical degrees tall--somewhat taller than one-half wavelength. "Both it and WSM (Nashville) were originally 5/8 radiators, but a secondary lobe caused sky to groundwave interference about 300 to 400 miles from the stations," he explained. "Shortening the towers to approximately a 9/16 wavelength radiator lowered groundwave strength slightly but eliminated the secondary lobe skywave problem." Smith also noted that WLW's tower is not top-loaded.

* Continuing Legal Education Seminar set: ARRL General Counsel Chris Imlay, W3KD, will conduct a Continuing Legal Education Seminar on February 1 in Doral, Florida, in conjunction with the Miami Tropical Hamboree. The session will be held at the Doral Hampton Inn from 1 to 5 PM. The $75 cost of the seminar includes a copy of Antenna Zoning for the Radio Amateur by Fred Hopengarten, K1VR--a $49.95 value. Those who have already purchased Hopengarten's book may attend for $25. The seminar will cover in-depth state and local antenna regulation, with a focus on amateur issues and other legal topics affecting Amateur Radio. Advance registration is required. Contact Linda Mullally, 860-594-0292, lmullally@..., to register. More information on Miami Tropical Hamboree 2002 is available on the Hamboree Web site, <http://www.hamboree.org/>.

* Frequency coordinators collecting data for ARRL Repeater Directory: Data collection for the 2002-2003 edition of the ARRL Repeater Directory is under way. Coordinators throughout the US and Canada will provide data for the

31st edition of the popular reference, due on sale by mid-May <http://www.arrl.org/catalog/?category=&words=8241>. Editor Brennan Price, N4QX, encourages repeater owners who have made changes in the operating parameters of their repeaters to immediately alert the frequency coordinator for their area. "By longstanding directive of the ARRL Board of Directors, all data published in the Repeater Directory must be submitted through a frequency coordinator in areas where a coordinator exists," Price said. "Any clubs wishing to change their listings must report these changes to the frequency coordinator in their area so that the changes can be made in the 2002-2003 edition." Changes should be reported as soon as possible and, in any case, by January 31! Contact information for coordinators throughout the country is available from the National Frequency Coordinators' Council Web site <http://www.arrl.org/nfcc> or from Brennan Price, N4QX, n4qx@....

* DARA announces 2002 scholarships: The Dayton Amateur Radio Association <http://www.dara-w8bi.com> has announced the availability of scholarships for the 2002-2003 academic year. Applicants must be graduating high school seniors in 2002 and hold an FCC Amateur Radio license of any class. DARA grants scholarship awards of up to $2000, as determined by the scholarship committee, toward tuition at an institution of higher education--as outlined in the application. To obtain an application, send a self-addressed, stamped envelope to DARA Scholarships, ATTN: DARA Scholarship Committee Chairman Gary Des Combes, N8EMO, 9873 Lower Valley Pike, Medway, OH 45341, or via e-mail to Gary Des Combes, n8emo1@.... Completed applications must be postmarked by June 1, 2002.

* Vote on QST Cover Plaque Award: The winner of the QST Cover Plaque Award for December 2001 was Joe Taylor, K1JT, for his article "WSJT: New Software for VHF Meteor-Scatter Communication." Congratulations, Joe! The winner of the QST Cover Plaque award--given to the author of the best article in each issue--is determined by a vote of ARRL members. Voting takes place each month on the Cover Plaque Poll Web page, <http://www.arrl.org/members-only/qstvote.html>. As soon as your copy arrives, cast a ballot for your favorite article in the January 2002 issue of QST. Voting ends January 31.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

458. Golden Fox Hunt Meeting

Yahoo group: m_a_r_s
Date: 1980-01-04 15:22:20 UTC [implausible archived timestamp]
From: vu2nlf
Topic: 458 Message: 458

MUMBAI AMATEUR RADIO SOCIETY

Dear Friend,

Further to the e-mail parcel of letters from ZRS.

Golden Fox Hunt is probably going to be the best event conducted by MARS. This is simply because it will be full of fun and frolic. (No commitments no Tension) just simple fun..!!!

All MARS members can participate for Treasure Hunt and Fox Hunt weather HAM or not, with or without equipment.

The event is in two parts (1) Treasure Hunt. (2) Fox Hunt. (First prize for both the events will be awarded)

The Treasure Hunt will be a normal good old treasure hunt (most your guys must have done this before) and obviously the Treasure will be the Frequency of Fox Hunt.. You can participate with your family and friends if you wish.

The Fox Hunt will be something interesting and new for Mumbai Hams. (Since it is being done for the first time, But nothing to worry about..!!!)

We have already homebrewed "THE FOX" , "THE ANTENNE" & "THE ATTENUATORS" for all the Teams. All that is required is one Handy from your side per team.. The handy must have a "Bar Graph" or "'S' Meter"
in order to study the signal strength.

Your family and friends can also join you for this event with a conditions that if your friend or your family member is a HAM then they must be MARS members (This is to avoid Non Mars Hams from Participating, I hope you guys understand this, otherwise the whole purpose of forming MARS fails).

There is ofcourse still time if our friends or Family are Hams and not a MARS members, this would be the best time to join us. (Membership will be accounted for 2002-2003).

VU2ZRS has put in a lot of effort for this GOLDEN FOX Event, so guys participate and make this event successful (All the members who are not going to participate are really going to regret it later) because this is going to be real fun..!!!!!

The Briefing meeting will be conducted on 20th Jan 2002 at 09:30 hours at Shishu Vihar School , dadar (E).
all the instructions and operation techniqes will be explained during the meeting.

A trial Fox hunt will also be carried out at that time to familiarise and try out the equipment. So Please Attend.

Early bird catches the FOX

Friends,
This is VU3PAN Pravin from Mumbai, Here is the QSP for HAM FRIENDS.
Following equipment are available in Mumbai with Om Sandesh Kamat VU2SXF and would like to dispose off.
You can contect him on his LL 8734791
or You can email me at vu3pan@...

1. FT-4113E VHF 2 MTR HADNY WITH BATTERY CASE,
CHARGER NC-65C, PA-6 DC ADOPTOR, 1/4 WAVE WHIP ANT, SOFT CASE.
TX 134 TO 174 MHZ , RX 18 TO 200 MHZ----------RS 7000/-

2. 15 WATTS VHF POWER AMPLIFIER 50MW I/P 15W O/P.----------RS 1000/-

3. HF/VHF SWR/PWR METER MADE BY VU2POP, MEASURES UPTO----------RS 750/-

4. 5/8 LAMDA VHF MAGMOUNT ANTENAE BY GT COMMUNICATIONS
WITH 2 MTR CABLE AND CONNECTOR , CENTRE ELEMENT IN 2 PIECES-----RS 750/-

5. 20-25 FEET TRIANGULAR CRANK UP TOWER WITH TRUST BEARING
& WALL
CLAMPS----------RS 5000/-

6. LIGHT/MEDIUM DUTY ANTENAE ROTATOR WITH CONTROL BOX AND
CABLE . CAN TURN LARGE VHF ARRAYS AND ALSO MEDIUM SIZE HF
TRIBANDER
----------(PRICE ON REQUEST)

7. MAGNETIC MOUNT WITH UHF SO 239 & 2 MTRS CABLE WITH
PL259 CONNECTORS
----------RS 350/-

8. PROFESSIONAL HEADPHONE-MIC COMBINATION WITH
ADJUSTABLE MIC
----------RS 500/-

9. AIR TRIMMERS. AIR GANG CONDENSORS, HF/VHF POWER TRANSISTORS, COIL
FORMERS ----------
--------AT ROCK BOTTOM PRICE
(ALL USED COMPONENTS)

10. 2 MTRS 2 CHANNELS CRYSTAL CONTROLLED TRANCEIVER KIT
145.100 & 145.200 MHZ. RX SEMIASSEMBLED WITH ALL COMPONENTSTX
O/P 1.5W ALL COILS SOLDERS
----------RS 1200/-

11. CABINET FOR HOMEBREW NR 60, RM 96 POWDER COATED, HOLED
DRILLED FOR ALL POTS & FREQUENCY COUNTER ETC----------RS 150/-

12. 4 DIGIT 10 MHZ FREQUENCY COUNTER USING 74C926 IDEAL FOR HOMEMADE
TRANCEIVER ASSEMBLED
----------RS 300/-

13. 9 MHZ COMMERCIAL CRYSTAL FILTER WITH 2 SIDEBAD
CRYSTALS (USED)----------
----------RS 400/-

14. 10.7 MHZ COMMERCIAL CRYSTAL FILTER WITH 1 SIDEBAD
CRYSTALS (USED)----------
----------RS 400/-

15. BRAND NEW BREADBOARD NOT USED FOR DOING EXPERIMENTS
IN ELECTRONICS
----------RS
200/-

16. ARRL 1984
HANDBOOK----------RS
150/-

17. DYNAMIC MIKE WITH PTT AND COMMERCIAL WITH CONNECTOR----------RS 250/-

18. USED 100 MICROAMP MOVING COIL METERS---------- RS
100/- EACH

============================================================

==>PRESIDENT HAYNIE RE-ELECTED; ARRL BOARD TACKLES CHALLENGING AGENDA

As expected, the ARRL Board of Directors has unanimously re-elected
President Jim Haynie, W5JBP, to a new two-year term. Haynie said defining
Amateur Radio's role in homeland security will top his list of initiatives
for his second term.

"We have a great role we could play in homeland security," Haynie said. "The
problem we have is getting Amateur Radio introduced to the proper agencies."
He said federal agencies "need a big education on what Amateur Radio does."

Meeting in Fort Worth, Texas, January 18 and 19, the Board also elected
former Southwestern Division Director Fried Heyn, WA6WZO, as Third Vice
President. Heyn will replace incumbent Third VP (and former Roanoke Division
Director) John Kanode, N4MM, who also was a candidate. All other ARRL
officers were re-elected unanimously.
```

The Board elected Rick Roderick, K5UR, to replace Heyn on the ARRL Executive Committee. Former Southeastern Division Vice Director Evelyn Gauzens, W4WYR, was elected as an ARRL honorary vice president.

The Board was expected to review a wide range of FCC proceedings and regulatory issues. The list includes consideration of the possibility--raised again recently by Haynie--that the ARRL work toward getting a bill introduced in Congress on the issue of CC&Rs. "We're going to be talking about that at length and what strategy we're going to use as far as congressional support," Haynie said. The League has been unsuccessful in efforts to get the FCC to incorporate CC&Rs under its limited federal preemption policy known as PRB-1.

Also up for discussion is the band threat posed by SAVI Technology's plan--and now tentatively agreed to by the FCC--to deploy unlicensed transient RF identification devices between 425 and 435 MHz in the 70-cm band. The League maintains that deploying such devices under the Commission's Part 15 rules could result in significant interference to amateur operations. Comments on the proposal are due February 12 (for more information, see "Threats to Our Amateur Bands" <http://www.arrl.org/news/bandthreat/>).

Haynie said the Board also will be considering the controversial topic of whether to eliminate "Section News" and contest results from QST and move these to the ARRL Web site as a cost-saving measure. "That's being debated at great length," Haynie said. Section News pages have been available on the Web site since January 1 (see "New ARRL section pages debut," below).

The Board also will hear a formal report from the Novice Spectrum Study Committee and consider action based on its recommendations. The committee last month advised eliminating the CW Novice/Technician Plus subbands, as such, and permitting Novice and Tech Plus (or Technician with Element 1 credit) licensees to operate CW on General-class 80, 40, 15 and 10-meter CW allocations at up to 200 W output. The committee proposed refarming the current Novice/Tech Plus subbands, in part to allow expansion of phone allocations on 80, 40 and 15 meters.

Attending for the first time as a new director will be Southwestern Division Director Art Goddard, W6XD, who succeeded Heyn. Newcomers to the back bench at this session include incoming ARRL Southwestern Division Vice Director Tuck Miller, NZ6T, and Southeastern Division Vice Director Sandy Donahue, W4RU. All took office January 1.

==>ONE UP, THREE TO GO: NEW AMATEUR RADIO ANTENNA INSTALLED IN SPACE!

Amateur Radio on the International Space Station got a new antenna it can call its own, thanks to a January 14 spacewalk by Expedition 4 crew members Yuri Onufrienko, RK3DUO, and Carl Walz, KC5TIE. ARISS Board Chairman Frank Bauer, KA3HDO, says another of the four new ARISS antennas could be installed January 25.

"It was beautiful to watch," Bauer told ARRL. "It went like clockwork, everything deploying just as it was supposed to."

While crewmate Dan Bursch, KD5PNU, monitored and videotaped the spacewalk--or EVA--from inside the ISS, Onufrienko and Walz first relocated a Russian cargo crane used to maneuver equipment and spacewalkers. Then, they installed the flexible-tape VHF-UHF Amateur Radio antenna on a handrail at the end of the Zvezda Service Module--the crew's living quarters. The ARISS initial ham station gear--single-band hand-held transceivers for 2 meters and 70 cm--is installed in the Zarya Functional Cargo Block. NA1SS currently uses antennas that were installed to aid docking operations and EVAs. The new VHF-UHF antenna is the first one designed for and dedicated specifically to support ARISS operations.

Bauer said no decision has been made yet on which of the remaining three ARISS antennas will be mounted during the scheduled January 25 EVA. Three of the antennas are for VHF-UHF, while the fourth will support HF, although no HF gear is aboard the ISS at this point. Installation of the new antenna on Zvezda paves the way for two separate ham stations aboard Space Station Alpha.

"It was pretty exciting to see the unfurled ISS ham antenna system permanently mounted on the outside edge of the Service Module," Bauer said. "The antenna system looked breathtaking from the videos we witnessed while supporting the EVA."

ARISS ARRL representative Rosalie White, K1STO, said she, too, was pleased to see this phase of the project coming together. "We started all this in 1998--and now we have a permanent antenna on the outside of the station. Pretty cool!"

Bauer credited Lou McFadin, W5DID; Mark Steiner, K3MS; Ken Nichols, KD3VK; and Mark Clausen with providing support for the antenna installation from the NASA Goddard/ISS Ham-Goddard Control Center. He said Carolynn Conley, KD5JSO, provided antenna installation support at NASA's Johnson Space Center Mission Control Center.

"Congratulations team on a job well done. We have taken our ideas, concepts and vision and transformed them into reality," he said.

The antenna installation got top billing in several high-profile media outlets covering the space walk.

==>MISSISSIPPI YOUNGSTERS HELP INITIATE EXPEDITION 4 CREW TO ARISS

Thirteen elementary school students in Mississippi fired off 18 questions January 16 to ham-astronaut Carl Walz, KC5TIE, who responded from the International Space Station during a pass over North America. As crowd of about 200 students and 50 parents looked on, youngsters at St Clare School in Waveland quizzed Walz for about 10 minutes. The contact with NA1SS was the first Amateur Radio on the International Space Station school QSO for the Expedition 4 crew, which has been aboard the ISS for just over a month.

"These students are going to have a very slow time of landing back on Planet Earth, and the parents are still on Cloud Nine!" Coordinating teacher Mary Bartholomew commented afterwards. Bartholomew said that her students have

been studying the electromagnetic spectrum and space travel in preparation for this week's contact, which was facilitated by ARISS--a joint effort of ARRL, NASA and AMSAT.

As the contact began, ARISS mentor and control operator Tim Bosma, W6ISS, relayed congratulations to Walz from ARISS Board Chairman Frank Bauer, KA3HDO, for Monday's successful installation of the new VHF-UHF ham antenna. Bosma contacted the ISS via W6SRJ in Santa Rosa, California. Audio was relayed to and from the school via a WorldCom teleconferencing circuit.

Walz mentioned ham radio in two of his answers to the students. He said ham radio was one of the ways that he communicated with family and friends while on board the space station (an onboard e-mail system and a telephone are others). In response to a question about improvements to the NA1SS station, Walz noted Monday's ham antenna installation. The new antenna was not used for the January 16 contact, however.

In response to other questions, Walz reported that he and his crewmates, Commander Yuri Onufrienko, RK3DUO, and Dan Bursch, KD5PNU, were conducting experiments with algae, and had done research on lung function during the January 14 spacewalk. He told the students that on Christmas Day he unwrapped a few presents that he'd carried up and that he received books, CDs and pictures.

Walz said that the Mercury and Gemini project astronauts of the 1960s--especially John Glenn--were his role models in deciding to become an astronaut himself.

Reporters from a Biloxi TV station and three newspapers witnessed the ARISS contact. ARISS mentor Randy Becnel, W5UE, helped the staff and students prepare for the event.

Several more ARISS school contacts are set for this month and next. Bursch reportedly made several casual contacts last week while the ISS passed over the US. For more information, visit the ARISS Web site <http://ariss.gsfc.nasa.gov>.--Gene Chapline, K5YFL/ARISS

==>FCC AFFIRMS $10,000 FINE IN AMATEUR PIRATE CASE

The FCC has fined a Texas man $10,000 for transmitting without a license on an Amateur Radio band. Following a Notice of Apparent Liability issued in September, the FCC affirmed the $10,000 fine in a December 26 Forfeiture Order to David Edwin Merrell of Wichita Falls. The FCC said Merrell did not respond to the NAL.

In its earlier NAL, the FCC said it was acting on "numerous complaints" from the amateur community that an unidentified station operating on 7235 and 7238 kHz in the 40-meter band was causing "intentional interference to authorized communications." The FCC's High Frequency Direction Finding network determined that the signal was located in the Wichita Falls area. Last June, agents in the FCC's Dallas office monitored an unidentified station on 7220 kHz and determined that the transmission was coming from

Merrell's residence. "The station did not identify and transmitted only one-way broadcasts," the FCC said.

During as station inspection, Merrell "admitted to the transmissions and stated that he did not have a station operator license," the FCC said. Unconfirmed reports to the FCC indicate that Merrell may have continued to occasionally transmit on 40 meters following the FCC visit.

"Considering the entire record and applying the statutory factors listed above, this case warrants a $10,000 forfeiture," the FCC concluded. Merrell has 30 days from the date of the Order's release to pay the fine. If not paid, the matter could be referred to the Department of Justice for collection.

==>ARRL OFFERS ON-LINE "ANTENNA RESTRICTIONS 'HOW TO' CHART"

The ARRL Regulatory Information Branch has made available a "triage center" of sorts for amateurs facing the prospect of dealing with various roadblocks to erecting an antenna system at their residence. The new "Antenna Restrictions 'How To' Chart" page <http://www.ARRL.org/FandES/field/regulations/ant-how-to-charts.html> offers three separate outlines that help users to logically work through issues involving local government zoning restrictions; deed covenants, conditions and restrictions (CC&Rs); or rental/lease restrictions relating to antenna structures.

The prime focus is on dealing with Local zoning restrictions to putting up an antenna structure and how to make the best possible case at a local regulatory board hearing. Some of the advice there applies to CC&Rs and rental/lease situations too.

"Remember: at the hearing, your presentation will be 80% of the battle, and 100% of the basis for any record, if the case ends up going to court," the "Important Notice" on the page advises.

Each "how to" outline is structured around a series of questions--much like a logic or flow chart. Depending on the answer, the user is referred to specific information or additional resources. The page also offers some step-by-step suggestions. For example, the local government zoning outline suggests 10 steps to those seeking to change an overly restrictive local amateur antenna ordinance. One of them is to obtain the ARRL book Antenna Zoning for the Radio Amateur ($49.95; order Item 8217 from ARRL via the Online Store <http://www.arrl.org/catalog/?category=&words=8217> or order by calling toll-free 888-277-5289). Written by attorney Fred Hopengarten, K1VR, the book offers detailed information on working with local governments and describes proven techniques and strategies that amateurs can employ in efforts to obtain an antenna-structure permit.

As the page emphasizes up front, however, neither this book nor the outlines on the "Antenna Restrictions 'How To' Chart" page are intended as substitutes for advice from an attorney.

The local government zoning outline also offers suggestions and information for amateurs who would like their legislature to incorporate the limited federal preemption known as PRB-1 into their state's laws. So far, only 13 states have done so, but bills are still in the works in a few others.

The page offers limited guidance to those confronting CC&Rs--an issue facing more and more amateurs these days--and to those who rent or lease their homes and still want to be able to install an antenna--a situation where PRB-1 does not apply. In both instances, affected amateurs are advised to develop and present logical and persuasive cases for being allowed to install an antenna system--much as they would have to do when dealing with a local government.

==>TEAM USA FORMING FOR 2002 ARDF WORLD CHAMPIONSHIPS

The Slovak Amateur Radio Association (SARA) will host the 11th World Championships of Amateur Radio Direction Finding September 2-7 in the Slovak Republic. Participants are divided into five categories for men and four categories for women, in accordance with newly approved ARDF rules of the International Amateur Radio Union (IARU). Each country may have up to three members per category on its team. ARRL and IARU Region 2 ARDF coordinator Joe Moell, K0OV, says he needs a preliminary head count of interested radio-orienteers as soon as possible. IARU societies for each participating country must submit a Letter of Intent with tentative team size by January 31.

The US$300 per-person entry fee includes hotel accommodations (double occupancy), meals, local transportation to the Championships events, and fees for the cultural program. The fee is US$150 for entrants arranging their own camping accommodations and providing their own meals.

Those interested in competing as part of Team USA at the 2002 ARDF World Championships should notify Moell via e-mail <homingin@...> immediately. Include full name and mailing address, home telephone number, and date of birth. Entry fees are due in full to the organizers by July 15, 2002.

Team member selection will be based on performances in the first USA ARDF Championships last August and in the second USA ARDF Championships in Atlanta this April. For more information, visit the World Championships Web site <http://www.ardf.sk>. For more information on Team USA, radio-orienteering in the USA, and the upcoming USA Championships near Atlanta, visit Moell's "Homing In" Web site <http://www.homingin.com>.

==>SOLAR UPDATE

Solar scribe Tad Cook, K7VVV, Seattle, Washington, reports: Last week, we talked about a rising solar flux, with a peak around Thursday of this week. Instead the visible solar disk has few sunspots, and solar flux is almost 50 points lower than predicted. Geomagnetic conditions were unsettled last weekend, but not stormy. Instead of planetary A indices of 30, 20 and 15 for Friday through Sunday, they were 21, 15 and 11.

On Friday the planetary K index was at four most of the day. Higher latitude geomagnetic indices were greater. Alaska's College A index for Friday was 37, and the day prior was even higher at 45. The College K index went as high as 7 on Thursday, indicating a geomagnetic storm and absorption for radio signals traveling over the polar path.

Average daily solar flux was about 18 points higher than the previous week, and average daily sunspot numbers were more than 9 points lower.

The latest prediction for the next few days shows no geomagnetic upsets, with solar flux at 215 for Friday and Saturday and 220 for Sunday. Projected average solar flux for the whole week looks to be similar to this week, unless some new sunspots emerge. Holographic images of the sun's far side show a large active region, but it won't face Earth until some time after next week.

Sunspot numbers for January 10 through 16 were 179, 195, 174, 190, 191, 155 and 131, with a mean of 173.6. The 10.7-cm flux was 224.6, 228.9, 233.3, 240.7, 229, 218.3 and 216.1, with a mean of 227.3. Estimated planetary A indices were 17, 21, 15, 11, 8, 6 and 4 with a mean of 11.7.

==>IN BRIEF:

* This weekend on the radio: The ARRL January VHF Sweepstakes, the North American QSO Party (SSB), the 070 Club PSKFest, the LZ Open Contest (CW), the MI QRP January CW Contest, are the weekend of January 19-20. JUST AHEAD: The CQ 160-Meter Contest (CW), the REF Contest (CW), the BARTG RTTY Sprint, the UBA DX Contest (SSB) and the Kansas QSO Party are the weekend of January 26-27. See the ARRL Contest Branch page, <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar, <http://www.hornucopia.com/contestcal/index.html> for more info.

* Amateur Radio Emergency Communications Course January registration: Registration for the Level III Amateur Radio Emergency Communications Course (EC-003) will open on Monday, January 21. January registration for the Level II ARRL Amateur Radio Emergency Communications Course (EC-002) will remain open over the January 19-20 weekend (or until the 50 seats are filled). February registration for Level I will open Monday, February 4. Courses must be completed in order, starting with Level I. To learn more, visit the ARRL Certification and Continuing Education Web page <http://www.arrl.org/cce> and the C-CE Links found there. For more information, contact Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* New ARRL section pages debut: Section News pages for all ARRL sections now are available on the ARRL Web site. Hams can log on to read the latest news from their section as well as keep up with what's happening in other sections around the country. The pages include ARRL section leadership contact information, links to hamfest and club listings, and a handy section boundary map. These new pages provide section managers with the means to communicate rapidly and efficiently with their constituents. ARRL members who are logged on to the site as members will find their section page link

on the right-hand side of the screen--in the box just above the one that says "Current Feature Articles." Non-members will find a link to a page that lists all section pages. "Alert" messages tell hams of late-breaking section-related news, urgent events, or last-minute changes to publicized activities. To contribute news or photos, contact your section leadership <http://www.arrl.org/FandES/field/org/smlist.html>.

* ARRL Foundation scholarship deadline looms: The deadline is fast approaching to apply for ARRL Foundation-sponsored scholarships. Individual awards range from $500 to $5000. Don't delay! Send scholarship applications with academic transcripts to The ARRL Foundation, 225 Main St, Newington CT 06111. The February 1, 2002, postmark deadline is firm--there are no exceptions! For an application, visit the ARRL Foundation Scholarship Programs Web page <http://www.arrl.org/arrlf/scholgen.html>.

* Help available for viewing and filing FCC comments: The ARRL Web site now offers help for those planning to file comments electronically with the FCC on petitions for rulemaking and other FCC proceedings that invite public comments. Visit the "How to File Comments on FCC Proceedings" page <http://www.arrl.org/FandES/field/regulations/news/filing_hints.html>. Information on the page explains about the FCC's Electronic Comment Filing System (ECFS) <http://www.fcc.gov/e-file/ecfs.html> and includes practical tips on how to use it. The page also decodes some of the FCC's acronyms, such as NPRM, NOI and R&O, and explains their purpose in the regulatory process.

* ARRL Vice Director Receives Distinguished Service Award: ARRL Southwestern Division Vice Director Tuck Miller, NZ6T, of National City, California, has received the Distinguished Service Award of the San Diego Trolley system. While operating his trolley last October, Miller was asked to help a passenger who was unable to breathe. Immediately recalling his first aid training, Miller applied the Heimlich maneuver and successfully dislodged food blocking the passenger's airway. This act saved the passenger's life and earned Miller the highest civilian award conferred by the City of San Diego. Miller's actions were recognized at a ceremony at San Diego Trolley Headquarters on December 6, 2001.

* CQ VHF to return as a quarterly: CQ VHF will resume publication this spring as a quarterly magazine, publisher Richard Ross announced today. The magazine ceased publication in 1999. Longtime CQ magazine "VHF-Plus" Editor Joe Lynch, N6CL, will be editor of the new quarterly. The first issue is due out in May. In announcing the publication's return, CQ Communications noted that the "overwhelming majority" of US hams have license privileges that primarily permit operation above 50 MHz. "However, the prime focus of the current ham magazines remains HF," CQ Communications said in a news release announcing the change. CQ Communications said the revived CQ VHF was designed with marketplace realities in mind and "will rely primarily on subscription revenues to meet expenses." CQ Communications said CQ VHF "will retain the friendly, conversational, look and feel of the original, but its technical content will be somewhat higher-level." A subscription will be $25 per year in the US.

* Articles sought for ARRL's Ham Radio . . . Planning for the Future: ARRL Field & Educational Services is seeking original articles for the next edition of its publication Ham Radio . . . Planning for the Future--Proceedings of the ARRL National Educational Workshop. The annual publication is a compilation of articles written by hams that will be of interest to teachers, instructors, club members and ham/Scout leaders. Typical articles detail club activities and events, licensing classes, and general ham radio information and can provide a "springboard" for your radio club activities or licensing class. Submit articles by e-mail to Jean Wolfgang, WB3IOS, jwolfgang@.... Articles must be received by March 31, 2002.

* RSGB elects a new president: Bob Whelan, G3PJT, is the new president of the Radio Society of Great Britain, effective January 1. Whelan succeeds Don Beattie, G3BJ; he will serve a two-year term. Whelan said he was looking forward to the challenges ahead in raising the awareness of the value of Amateur Radio as a way of interesting the next generation of radio engineers and scientists. There are 58,000 amateurs in the UK. The Radio Society of Great Britain is an International Amateur Radio Union member-society.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; http://www.arrl.org. Jim Haynie, W5JBP, President

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb at http://www.arrl.org for the latest news, updated as it happens. The ARRLWeb Extra at http://www.arrl.org/members-only/extra offers ARRL members access to informative features and columns.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other

material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

464. Snow..... A True Story

Yahoo group: m_a_r_s
Date: 2002-01-22 17:42:38 UTC
From: vijay motwane
Topic: 464 Message: 464

This had most of the state of Michigan laughing for 2 days
and a very embarrassed female news anchor who will, in the future, likely think before she speaks.

What happens when you predict snow but don't get any....

True story...we had a female news anchor who, the day after
it was supposed to have snowed and didn't, turned to the weatherman and asked "So Bob, where's that 8 inches you promised me last night?"

Not only did HE have to leave the set, but half the crew did
too they were laughing so hard!

ALL FOX (OSAMA) HUNTERS

CU ALL AT EROS AT 8.30 AM .REMEBER YOU ALL HAVE PAID UP FOR IT SO DONT MISS THE FUN .HUNT STARTS AT 9 SHARP .

PLEASE EAT BREAKFAST AND COME
LUNCH WOULD BE TOWARDS 2 , 2.30

CARRY WATER

CARRY A PEN PLEASE .A PEN WILL REALLY HELP YOU SOLVE THE CLUES TO THE TREASURE HUNT AND ALSO FILL UP YOUR FORMS

WEAR TENNIS SHOES OR COMFORTABLE SHOES

PLEASE CHARGE YOU BATTARIES

WE PROMISE EACH TEAM WILL ENJOY THIS ACTIVITY
IF NOT YOU MAY PAY US ANOTHER RS150 .

PLEASE

Carry your valid driving license

Please obey all traffic rules

Carry ham license

Carry Xerox copy of the permission from wpc

Please hand over your mobile to us at church gate

Emergency frequency WILL BE TOLD TO YOU ON THE SUNDAY

Please wear mars caps

Carry water, sunglasses, and snacks

DRIVE CAREFULLY, TWO-WHEELER RIDERS ARE ADVISED TO WEAR HELMET.

ENSURE YOU HAVE ADEQUATE FUEL FOR THE FORWARD AND RETURN TRIPS.

PARK YOUR VEHICLES WELL OFF THE ROAD ESPECIALLY ON MAJOR ROADS/

HIGHWAYS. DON?T PARK AT BLIND TURNS OR ON NARROW BRIDGES.

THE FOX?S LOCATION MAY NOT BE ON A MOTORABLE ROAD; BE PREPARED TO WALK

CLIMB CRAWL ETC. ENSURE U HAVE SUFFICIENT DRINKING WATER ENROUTE.

Don?t forget to ENJOY

ALL FOX (OSAMA) HUNTERS

CU ALL AT EROS AT 8.30 AM .REMEBER YOU ALL HAVE PAID UP FOR IT SO DONT MISS THE FUN .HUNT STARTS AT 9 SHARP .

PLEASE EAT BREAKFAST AND COME
LUNCH WOULD BE TOWARDS 2 , 2.30

CARRY WATER

CARRY A PEN PLEASE .A PEN WILL REALLY HELP YOU SOLVE THE CLUES TO THE TREASURE HUNT AND ALSO FILL UP YOUR FORMS

WEAR TENNIS SHOES OR COMFORTABLE SHOES

PLEASE CHARGE YOU BATTARIES

WE PROMISE EACH TEAM WILL ENJOY THIS ACTIVITY
IF NOT YOU MAY PAY US ANOTHER RS150 .

PLEASE

Carry your valid driving license

Please obey all traffic rules

Carry ham license

Carry Xerox copy of the permission from wpc

Please hand over your mobile to us at church gate

Emergency frequency WILL BE TOLD TO YOU ON THE SUNDAY

Please wear mars caps

Carry water, sunglasses, and snacks

DRIVE CAREFULLY, TWO-WHEELER RIDERS ARE ADVISED TO WEAR HELMET.

ENSURE YOU HAVE ADEQUATE FUEL FOR THE FORWARD AND RETURN TRIPS.

PARK YOUR VEHICLES WELL OFF THE ROAD ESPECIALLY ON MAJOR ROADS/

HIGHWAYS. DON?T PARK AT BLIND TURNS OR ON NARROW BRIDGES.

THE FOX?S LOCATION MAY NOT BE ON A MOTORABLE ROAD; BE PREPARED TO WALK

CLIMB CRAWL ETC. ENSURE U HAVE SUFFICIENT DRINKING WATER ENROUTE.

Don?t forget to ENJOY

Hi Nafisa

I am always late comer now a days to my qth and to shack and 22.00 hrs is better suitable for me. Hence I would prefer 2200 hrs as a better choice. But I would say the majority wins as per your confirmation data.

Best regards

Jaiprakash

Hi Friends / Fox hunters

Good luck to all teams

Take a note

This is a trial event only

Next will be coming soon - The semi finals

Final will be:

Go around the globe - hunt OSAMA - Winners will be
awarded by Wiskey land. If you are hunted ??????????

So take care if you win you have to go to semi finals
then to finals and if you are hunted - who knows -
who - what - where - when - why and how.

Good luck friends don't panick MARS is with you

Jai Hind

January 25, 2002
***************

IN THIS EDITION:

* +ARRL Board okays modified refarming plan
* +Vanity processing slowly resuming
* +ARISS gets new HF antenna
* +FCC modifies California ham's sanction
* +Wisconsin in line to be next PRB-1 state
* +ARRL award winners announced
* +Hams help sailboat in distress
* RACES members aid nursing home residents
* Solar Update
* IN BRIEF:
This weekend on the radio
Amateur Radio Emergency Communications Course registration
Reminder: Continuing Legal Education Seminar set
KK5DO joins AMSAT-NA Board of Directors
New Jersey call sign license plates to bear "Amateur Radio" legend
Shiro Nomura, JA1CB, SK
Call for papers for Southeastern VHF Conference

+Available on ARRL Audio News

==========================================================

==>ARRL BOARD ADOPTS MODIFIED NOVICE BAND REFARMING PLAN

The ARRL Board of Directors has adopted a modified proposal to refarm the
Novice bands, now that the FCC no longer issues Novice licenses. The Board
met January 18-19 in Fort Worth, Texas.

The ARRL Novice Spectrum Study Committee had proposed allowing Novice and
Tech Plus (or Technician with Element 1 credit) licensees to operate CW on
General-class 80, 40, 15 and 10-meter CW segments at up to 200 W output. The
panel recommended refarming the current Novice/Tech Plus CW subbands, in
part to allow expansion of phone allocations on 80, 40 and 15 meters.

The Board approved a modified plan that would leave in place or slightly
trim the amount of additional phone spectrum the committee had recommended
for 75 and 15 meters. The amended plan would drop the US phone band to 3725
kHz on 75 meters but leave it at 21,200 kHz on 15 meters. The original plan
called for dropping both by 25 kHz.
```

The 75-meter proposal would expand the phone band by 50 kHz for Generals over the present allocation and by 25 kHz for Advanced and Extra licensees. On 15 meters, Generals would get another 25 kHz of phone spectrum, but phone privileges for Advanced and Extra class operators would stay the same.

The Novice Spectrum Study Committee's original recommendations for 40 and 10 meters were accepted. The ARRL plans to propose the modified refarming plan to the FCC later this year along with other regulatory requests.

The Board also deferred until its July meeting a decision on whether to cut "Section News" and contest "line scores" from QST and move them to the ARRL Web site as part of an effort to stem ARRL operating losses. Before deciding to relocate the QST content, the Board said, it wants members to be "aware of the reasons for the proposed relocation and the enhanced capabilities available on the Web site." The Board said it also wants to evaluate "variations and alternatives" to the proposal.

The Board did decide to eliminate the minutes of its own meetings--published as "Moved and Seconded"--from QST. Minutes already are posted on the ARRL Web site and will be made available via alternative means to members lacking Internet access.

In other business, the Board accepted the Volunteer Resources Committee's recommendations to change several field organization rules. The new rules state that a section manager "is accountable for carrying out the duties of the office in accordance with ARRL policies" and "shall act in the best interests of Amateur Radio." Among other changes, the revised rules will prohibit a section manager removed from office from running in the next SM election following removal. Anyone removed by action of the Executive Committee would have to get that committee's consent to be eligible to run again. The Executive Committee also will have the power to cancel any field organization appointment "whenever it appears to be in the best interest of the ARRL to do so."

The changes were prompted in part by the Executive Committee's declaring the office of Virginia Section Manager vacant last May. The rules changes will not affect the current Virginia SM election process, already under way.

The Board also modified the ARRL by-laws to say that anyone removed from office by recall won't be eligible to be a candidate for director or vice director for three years following removal from office.

The Board resolved to petition the FCC in order to elicit "a clear statement from FCC acknowledging the limit of its statutory jurisdiction to authorize the manufacture and sale of unlicensed Part 15 devices."

The Board further resolved to extend the ARRL's "most sincere condolences to the families and friends of the radio amateurs who lost their lives on September 11, 2001." The Board also commended and honored amateurs who volunteered during the subsequent rescue and recovery efforts.

ARRL President Jim Haynie, W5JBP, who was elected to another two-year term during the Board meeting reported that he felt the League's relationship

with the FCC had improved and that he was very pleased with the Amateur Radio Day at the FCC held last September.

==>VANITY PROCESSING RAMPING UP SLOWLY

Vanity call sign processing is resuming, but not exactly apace. On January 23 and 24, the FCC processed 70 vanity grants from applications received October 16, 17 and 18. Additional vanity grants are expected to follow as FCC personnel assemble all applications--paper and electronic--received on a given date.

Prior to January 9--when the FCC processed 27 vanity applications received from October 15 filers--the Commission had not issued any vanity grants since last October 30.

The holdup got its start when a batch of mail containing some 100 vanity applications received during the first two weeks of October apparently was mislaid in the process of dealing with the anthrax scare and mail decontamination. FCC policy gives equal priority to paper and electronic vanity applications, so the mail snafu has affected all vanity processing.

All vanity fee payments have been recorded and deposited or charged to credit card holders' accounts. The FCC has been using vanity fee payment data from the FCC's fiscal agent, Mellon Bank in Pittsburgh to contact applicants directly to have them resubmit their applications.

Since October, the FCC has been urging all of its customers to avoid using the mails to conduct business with the agency and to use electronic means to file comments or applications. The FCC has been acting on amateur renewals and administrative updates filed on-line via the Wireless Telecommunications Bureau's Universal Licensing System <http://wireless.fcc.gov/uls>. All applicants now must include an FCC Registration Number (FRN) when filing any application.

==>NEW HF AMATEUR RADIO ANTENNA INSTALLED ON ISS

Amateur Radio on the International Space Station gained a new HF antenna January 25--although there's no HF gear aboard the ISS as yet. The antenna--the second of four slated for installation aboard the Service Module--was put into place during a spacewalk--or EVA--conducted by Expedition 4 Crew Commander Yuri Onufrienko, RK3DUO, and astronaut Dan Bursch, KD5PNU.

The antenna is a flexible-tape design--similar to, but longer than, a VHF-UHF antenna installed during a January 14 EVA by Onufrienko and astronaut Carl Walz, KC5TIE. ARISS Board Chairman Frank Bauer, KA3HDO, said the antenna would be installed at the end of the Service Module in the 2 o'clock position (6 o'clock is pointing toward Earth).

The HF antenna is a 2.5-meter (8.2-foot) long flexible tape. Bauer thinks it will definitely work on 10 meters and speculated that it might work on 15 or 20 too. Bauer added that he did not know when HF gear would be transported to the ISS nor when it might be made available for use by a future crew.

The EVA lasted several hours and also involved attaching six thruster plume deflectors on the ISS as well as the ham antenna work. Installation involved not only the mechanical deployment of the antenna but routing cables, establishing the RF connection and even photographic documentation.

A paper entitled "2001: an Amateur Radio Space Odyssey on the International Space Station," which details the development of ARISS and discusses the four new ARISS antennas is available via the ARISS Web site <http://ariss.gsfc.nasa.gov/EVAs/amsat01.pdf>.

The Expedition 4 crew is tentatively scheduled to speak with students at Butte High School in Montana the week of January 28. The contact was being arranged either via Tony Hutchison, VK5ZAI, in South Australia or via WH6PN at Sacred Hearts Academy in Honolulu.

==>FCC MODIFIES SANCTION IN CALIFORNIA REPEATER CASE

The FCC has reduced a sanction imposed last year against a California amateur who had been banned from using repeaters on the 144, 222, or 440-MHz bands for three years. The case involved allegations that Ted R. Sorensen III, KC6PQW, of Agoura Hills, California, and Gregory S. Cook, ex-KC6USO, of Chico, California, had conspired in making late-night one-way transmissions on the W6NUT 147.435 MHz repeater that originated from Sorensen's station.

Last March the FCC accepted Cook's voluntarily surrendered license. Although he did not dispute the allegations, Sorensen got a lawyer and protested his lengthy banishment. In his initial response to the FCC, Sorensen offered to accept a suspension from talking on the W6NUT repeater for a year "as fair punishment." After reviewing Sorensen's case, the FCC decided to accept that less-stringent settlement of the case, rather than get involved in a hearing.

Because Sorensen already has been off the repeater for more than two months, the prohibition expire next September 15.

The FCC review into the operation of the W6NUT repeater continues, following complaints of jamming by users, broadcasting, playing music and "a plethora of other violations," the FCC said.

==>WISCONSIN AMATEUR ANTENNA BILL HEADED FOR GOVERNOR'S DESK

Wisconsin is poised to be the next state to incorporate the language of the limited federal preemption known as PRB-1 into state law. ARRL Wisconsin Section Manager Don Michalski, W9IXG, said the antenna bill--Assembly Bill 368, "Amateur Radio FCC PRB-1 Amateur Radio Antenna Protection Act"--passed the State Senate this week on a voice vote. The bill now goes to Gov Scott McCallum for his signature.

"We would like to acknowledge this victory due to the tireless efforts of Jim Romelfanger, K9ZZ, SK," Michalski said. "Without his hard work over many years, it would not have been possible. This is a tribute to Jim, and we should all be grateful." Romelfanger, a Wisconsin Amateur Radio activist, ARRL Public Information Coordinator and editor of the Badger State Smoke Signals ham radio newspaper, died December 22.

Wisconsin ARRL State Government Liaison Jim Lackore, AD9X, said AB 368 passed the upper chamber January 22 with no expressed opposition.

AB 368 would require that ordinances or resolutions affecting the placement, screening or height of Amateur Radio antennas or support structures have a "reasonable and clearly defined aesthetic, public health or safety objective." Such an ordinance or resolution also must represent "the minimum practical regulation" necessary to accomplish the locality's objectives and must reasonably accommodate Amateur Radio communication.

Lackore and Michalski were encouraging Wisconsin amateur to contact Gov McCallum and urge him to sign AB 368 into law. Lackore noted that e-mail can be sent to McCallum's e-mail address, wisgov@..., or via the governor's Web site <http://www.wisgov.state.wi.us>. Messages also may be sent via fax (608-267-8983) or by mail to The Office of the Governor, 115 East State Capitol, Madison, WI 53702.

Michalski thanked everyone who has supported the bill. "Your letters have obviously had an impact," he said. "This is the last step to passage so your help is appreciated one more time."

To date, 13 states have incorporated PRB-1 language into their statues, and measures are pending in a few other states. Some states, such as Alaska and Virginia, have taken PRB-1 another step, passing laws that include schedules of minimum antenna structure heights, below which municipalities may not further regulate.

A copy of the pending legislation is available on the Wisconsin Legislature Web site, <http://www.legis.state.wi.us/2001/data/AB-368.pdf>.

==>ARRL BOARD NAMES AWARD WINNERS

The ARRL Board of Directors has named the winners of the 2001 ARRL International Humanitarian Award and the Bill Leonard, W2SKE, Professional Media Award. The Board made its selections during its meeting in Fort Worth, Texas January 18-19.

The 2001 ARRL International Humanitarian Award winner is Dr Jim Hirschman, K4TCV, of Miami, Florida, "in recognition of a lifetime of medicine and public service communications that has touched so many lives and put our Service in such a positive light," the Board said in making the award.

The Board's resolution naming Hirschman said he "combines his Amateur Radio and medical skills to give on-air advice on a moment's notice."

Hirschman's skills were put to the test on two occasions when individuals were injured as a result of pirate attacks on sailing vessels in the Caribbean Sea. In March 2000, marauders fired upon Jacco van Tuijl, KH2TD, and his son, Willem, and attempted to commandeer the family's sailboat while it was moored off the coast of Honduras. Willem was severely injured. Following van Tuijl's radio calls for help, Hirschman provided live on-the-air medical assistance for approximately nine hours until the youngster could be evacuated to medical facilities.

Hirschman also provided critical medical advice in the wake of a subsequent and similar incident a year later, when Bo Altheden, SM7XBH, of Sweden, was shot by pirates who boarded his vessel. Altheden's wife put out a call for help on 20 meters that attracted the attention of the Maritime Mobile Service Net. The Board said the incidents were "but two examples of a lifetime of dedication to public service that has made him well-known internationally."

Hirschman will get an engraved plaque, and his accomplishments will be the subject of an article in a future edition of QST.

The winner of the 2001 Bill Leonard, W2SKE, Professional Media Award is Michaelangelo Conte, a staff writer for The Jersey Journal in Jersey City, New Jersey. This award is given annually to a professional journalist (or group) for outstanding coverage of Amateur Radio in TV, radio, print or multimedia. The winner receives an engraved plaque and a check for $500.

Conte's winning submission, "Radio operators took to air--Aided rescue at Ground Zero," covered the communications activities of the Jersey City Amateur Radio Club following the World Trade Center attack last September. The club, which is affiliated with the Hudson County chapter of the American Red Cross, focuses on emergency communications, was just being formed and had not even held its first meeting prior to September 11. Several club members were interviewed about their roles in providing a needed communications link between Jersey City and emergency units in lower Manhattan.

Conte was nominated by the club's president Rich Krajewski, WB2CRD, who subsequently renamed the new organization the Cirri Memorial Radio Club in honor of Robert D. "Bob" Cirri Sr, KA2OTD, a Port Authority police officer and ARRL Hudson County District Emergency Coordinator who died in the WTC attack while helping to evacuate the buildings.

In Amateur Radio circles, Bill Leonard, a former president of CBS News, is remembered for his 1958 contribution to Sports Illustrated, "The Battle of the Hams," which describes the "sport of DXing." In November of 1996, Leonard was inducted into the Broadcasting and Cable Hall of Fame. Leonard became a Silent Key in 1994.

==>AMATEUR RADIO OPERATORS HELP SAILBOAT IN DISTRESS

Amateur Radio played a role in the rescue of two people aboard the sailing vessel Antigone that ran aground off Honduras January 24. Ed Petzolt, K1LNC, of Hobe Sound, Florida, reports that, despite some apparently deliberate interference, members of the Intercontinental Net on 14.300 MHz helped relay communications from the vessel, which was equipped with an HF marine radio.

David Walz, AG4LI/HR6, in Honduras was in contact with the vessel and passed traffic from the stranded mariners to the Net. Petzolt said he was able to patch the US Coast Guard in Miami through to AG4LI/HR6, so the Coast Guard could obtain additional information and coordinate with Honduran authorities. Petzolt said the two passengers aboard the 40-foot vessel were safe, and the boat was on the beach. Amateurs, he said, stood by in case

serious problems arose during the rescue effort.

The registry of the vessel and the nationalities of the passengers were not known. The FCC was alerted to investigate the source of the interference.

==>PENNSYLVANIA RACES MEMBERS ACTIVATE FOR NURSING HOME FIRE

Hams responded December 15, 2001, after fire broke out at Cedarbrook County Home in South Whitehall Township and soon was upgraded to a four-alarm fire.

Emergency Management Agency Coordinator James Kelly, KA3UQP, began opening temporary shelters in anticipation of the evacuation of the 515 residents. He notified the South Whitehall EMA team that included Jeff Kelly, N3MFT, who is the Township EMA Communications Officer, Lehigh County Emergency Coordinator and RACES Radio Officer. It was agreed that RACES would be activated to staff the shelters and provide additional support.

A net was established, and Deputy RACES Officer Bruce Bobo, KB3FIH, directed operations from the county's mobile command center at the fire scene. RACES members were deployed to the scene as well as at shelter locations and the local trauma center. Over the next 24 hours, more than two dozen RACES members helped to provide communications until temporary shelters had shut down and residents transported to appropriate care.

On December 17, Lehigh County EMA contacted Kelly for RACES to assist in coordinating the return of patients to the facility, which received smoke and water damage. Bobo said RACES was called back in to help because it was determined that the amateur system had the best communications coverage over the four-county area where patients had been sheltered temporarily. More than 20 RACES members from Lehigh and Northampton counties provided support for the safe return of all 515 residents. Authorities expressed appreciation to the RACES teams and for use of the W3OI 146.94, W3OK 146.70 and N3MFT 448.775 MHz repeaters.--Jeff Kelly, N3MFT

==>SOLAR UPDATE

Solar seer Tad Cook, K7VVV, Seattle, Washington, reports: Average sunspot numbers rose more than nine points this week, and average solar flux dropped nearly eight points, so solar activity was about the same as last week. There weren't any days with big geomagnetic upsets. Saturday was slightly unsettled, with the planetary K index at four over two of the three-hour reporting periods. Because of lower indices earlier, the planetary A index for the day was only 11.

Latest projections show stable geomagnetic conditions well into next month, with planetary A indices in the low and mid single digits. This is generally good for HF operators because of lower absorption. Predicted solar flux for Friday through Sunday is 225.

NASA reported this week that the previous two solar cycles were double-peaked, and the current one is also. At one time we believed that Cycle 23 peaked in mid-2000, but then a larger peak emerged in late 2001. No doubt this explains all that fabulous F2 layer propagation on 6 meters last

fall. You can read NASA's story on the Science@NASA Web site <http://science.nasa.gov/headlines/y2002/18jan_solarback.htm>.

Sunspot numbers for January 17 through 23 were 122, 156, 153, 212, 187, 178 and 272 with a mean of 182.9. The 10.7 cm flux was 211.8, 210.5, 213.7, 222.2, 224.5, 228.7 and 226.5, with a mean of 219.7. Estimated planetary A indices were 6, 5, 11, 7, 9, 6 and 6 with a mean of 7.1.

==>IN BRIEF:

* This weekend on the radio: The CQ 160-Meter Contest (CW), the REF Contest (CW), the BARTG RTTY Sprint, the UBA DX Contest (SSB) and the Kansas QSO Party are the weekend of January 26-27. JUST AHEAD: The North American Sprint (SSB), the Vermont, New Hampshire, Minnesota and Delaware QSO parties, the 10-10 International Winter Contest (SSB), the FYBO Winter QRP Field Day, and the Mexico RTTY International Contest are the weekend of February 2-3. See the ARRL Contest Branch page, http://www.arrl.org/contests/ and the WA7BNM Contest Calendar, <http://www.hornucopia.com/contestcal/index.html> for more info.

* Amateur Radio Emergency Communications Course registration: Registration for the Level III Amateur Radio Emergency Communications Course (EC-003) will remain open over the January 26-27 weekend--or until the 50 seats are filled. February registration for Level I will open Monday, February 4, at 4 PM Eastern Time. Courses must be completed in order, starting with Level I. To learn more, visit the ARRL Certification and Continuing Education Web page <http://www.arrl.org/cce> and the C-CE Links found there. For more information, contact Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* REMINDER: Continuing Legal Education Seminar set: ARRL General Counsel Chris Imlay, W3KD, will conduct a Continuing Legal Education Seminar on February 1 in Doral, Florida, in conjunction with the Miami Tropical Hamboree. The session will be held at the Doral Hampton Inn from 1 to 5 PM. The $75 cost of the seminar includes a copy of Antenna Zoning for the Radio Amateur by Fred Hopengarten, K1VR--a $49.95 value. Those who have already purchased Hopengarten's book may attend for $25. The seminar will cover in-depth state and local antenna regulation, with a focus on amateur issues and other legal topics affecting Amateur Radio. Advance registration is required. Contact Linda Mullally, KB1HSV, 860-594-0292, lmullally@..., to register. More information on Miami Tropical Hamboree 2002 is available on the Hamboree Web site <http://www.hamboree.org/>.

* KK5DO joins AMSAT-NA Board of Directors: Bruce Paige, KK5DO, is the newest member of the AMSAT-NA Board of Directors. Paige, a first alternate, acceded to the Board upon the resignation of Andy MacAllister, W5ACM, who stepped down because of a heavy professional workload. Paige will serve out the remainder of MacAllister's term, which runs through September. AMSAT-NA President Robin Haighton, VE3FRH, has appointed Paige to also replace MacAllister as vice president of user services. "I thank Andy for his many

years of service to AMSAT and his active role as vice president of user services," said Haighton, who expressed his regrets at MacAllister's resignation but said he looked forward to MacAllister's "wise counsel" on future AMSAT matters. In a teleconference January 17, the AMSAT Board appointed AMSAT-NA's immediate past president Keith Baker, KB1SF, as executive vice president of AMSAT. "I welcome Keith, with his past experience and working knowledge of AMSAT," Haighton said. Paige will continue as AMSAT-NA's awards manager.

* New Jersey call sign license plates to bear "Amateur Radio" legend: Starting in February, New Jersey amateurs will be able to request call sign license plates bearing the legend "Amateur Radio," thanks to an amendment to the state's existing call sign license plate statute. The amendment was signed December 28, 2001, by then-acting Gov Donald DiFrancesco. The DMV is not yet ready to process new plates at this point, however. Northern New Jersey Section Manager Bill Hudzik, W2UDT, said the amendment now allows hams with leased vehicles to apply for plates, includes the words "Amateur Radio" on the plates, and increases the fee to $15. "Many New Jersey hams have worked over the years to make this happen," said Hudzik, who credited ASM John Hults, K2WJ, with started the ball rolling on the amendment some eight years ago. The measure also got help over the years from then-Hudson Division Director Steve Mendelsohn, W2ML--now Hudson Division Vice Director--as well as past Northern New Jersey SM Jeff Friedman, K3JF; the bill's original sponsor, Assemblyman Nick Felice, W2YGM; Frank Terranella, N2IGO, who drafted the bill's text; and Northern New Jersey State Government Liaison Ray Makul, K1XV. "This was a true team effort!" Hudzik said.

* Shiro Nomura, JA1CB, SK: Retired Kenwood executive and chief engineer Shiro Nomura, JA1CB, of Tokyo, Japan, died January 18. He was 70. An ARRL and Japan Amateur Radio League member, Nomura was a Kenwood Communications Corporations chief engineer and research-and-development manager prior to his retirement. He also was the designer of the popular TS-930S transceiver. Between 1989 and 1997, he directed Kenwood USA operations in California. Nomura was a DXCC Honor Roll member (352 mixed) and was active on the air until shortly before he died. Survivors include his wife and the couple's son and daughter. A service was held January 22 in Tokyo. Friends may express condolences to the family via e-mail, ja1cb@....--Junji Saito, JA7SSB

* Call for papers for Southeastern VHF Conference: The Southeastern VHF Society has issued its first call for papers for the sixth annual Southeastern VHF Conference. The conference will be held April 26-27 in Oak Ridge, Tennessee. Registration, program details, hotel and travel information is available on the Society's Web site <http://www.svhfs.org/>. The conference will include presentations from accomplished VHF-UHF Amateur Radio enthusiasts. In addition, the program will include antenna gain measurements, pre-amp gain and noise figure measurements, the Friday evening flea market with vendor displays, the Saturday afternoon auction and the Saturday evening banquet. To submit a paper for inclusion in the Conference Proceedings, contact Skip Coppola, KG4QDZ, kg4qdz@.... The submission deadline is March 1, 2002. Proceedings of the 2002 Southeastern VHF Society

Conference will be available from ARRL.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Subject: [m_a_r_s] Night Owls' Net

Hi Friends.
Many of our friends who check on the Net have expressed a feeling that 10:00 p.m. is too late and hence with a confirmation from all the check ins on two or three consecutive days, we are changing the Net time to 9:30 p.m. Please let us know if anyone has a different opinion or this suits everyone fine.

IC-V8000
144MHz FM Transceiver

75W of output power
The combination of Icom's one piece, die-cast aluminum chassis and 75W of transmit power gives you the most powerful 2m mobile transceiver in its class! Your communications will get through.

HM-133V, remote control microphone
The backlit HM-133V*, gives you control of your IC-V8000 in the palm of your hand. The Icom exclusive "Hot keys" (F1/F2) memorize the transceiver full settings. As if switching between two separate radios, all operating frequencies, tone settings as well as the display color, fan speed, and set mode settings are memorized. * Optional for some versions.

Dynamic Memory Scan (DMS)
With 200 alphanumeric memory channels, Icom's exclusive DMS system gives you flexibility over your scanning lists never offered before in a 2m mobile, fully customizable into 10 banks.

CTCSS and DTCS operation standard
50 CTCSS and 1042 DTCS encode/decode plus tone scan functions for various communication applications. The "pocket beep" feature gives you an audible and visual indicator of an incoming call.

Weather Alert Scan (U.S.A. version only)
An amateur radio first, the IC-V8000 features a weather alert function to keep you on top of any weather emergencies. With a weather radio mode or weather alert, you are ready for quick response.

Easy Operation
The perfect solution for mobile operation, the IC-V8000 has a front firing speaker providing crisp and clear audio. Along with a 6 character alphanumeric display, it offers quick reference of user-defined memory channel information.

Standard DTMF encoder and optional decoder
10 DTMF memory channels with up to 24-digit DTMF codes can be used to control other equipment. The optional UT-108 DTMF decoder provides code squelch and pager functions.

And more...

- FM narrow mode switchable (U.S.A. version only) .
- Selectable squelch delay
- 10dB squelch attenuator
- Cloning capability from PC or between radios

Samlex Power Supply
Model SEC-1223

13.8V ? 23 Amps Continuous
7.00"W x 8.25"D x 2.20"H
Weight 3.5 lbs.

SAMLEX Model SEC-1223

This advanced switch-mode power supply was specifically designed for use with HF, VHF and UHF radios. The SEC switching power supply produces clean reliable power and is highly filtered to suppress RFI. The SEC series comply with FCC Class B, Part 15 standards by Underwriters Laboratories Inc. The SEC series is housed in an ultra slim line aluminum/steel case, 2.25" high, and matches the "footprint" of many popular land mobile radios. Optional custom designed radio cabinets can be used to enclose the radio and power supply to produce an integrated base station unit. The SEC series is electronically protected for short circuit, over voltage, over load and offers current limiting. The input voltage is factory preset to accept 120 VAC 60Hz, and can be easily user-modified to accept 240 VAC 50 Hz The SEC 1223 series offers continuous output current 23 amps.

The ARRL Letter
Vol. 21, No. 5
February 1, 2002
****

IN THIS EDITION:

* +President Bush gives ham radio a try!
* +ARRL to pull out all stops on 70-cm band threat
* +Members' donation will help preserve ham radio history
* +ARRL Field Day changes announced
* +RFI complaints have Ohio ham on the ropes
* +New distance records set on GHz bands
* Solar Update
* IN BRIEF:
This weekend on the radio
Amateur Radio Emergency Communications Course registration
Mystery satellite identified
+Broadcasters may borrow amateur band for Winter Olympics coverage
Olympic site is NOAA Weather Radio-ready, thanks to hams
Alan H. McMillan, W0JJK, SK
FCC converting ATINs to FRNs
Man injured installing antenna
Hamfests change dates
AMSAT-UK colloquium seeks papers

+Available on ARRL Audio News

==========

==>PRESIDENT BUSH ADDRESSES FLORIDA ARES NET

President George W. Bush spoke January 31 via Amateur Radio to members of the Northern Florida Amateur Radio Emergency Service Net (NFAN). The president was in Florida to spotlight five volunteer groups for their value to the new Office of Homeland Security--among them the Volusia County Amateur Radio Emergency Service (ARES).

"I want to thank all the volunteers who help make sure that Florida is prepared for any kind of emergency," the president said in part, after checking in around 9:15 AM to a regular session of the 75-meter ARES net. "I want to thank you all for helping your communities be prepared."

Northern Florida ARRL Section Manager Rudy Hubbard, WA4PUP, said Bush spoke from a portable station set up at a Daytona Beach-area fire station. At the request of ARES Volusia County Emergency Coordinator Joette Barnett, KG4HPN,

John Schmidt, AF4PU, and Clifford Fraser, KE4HIY, arranged to have the station ready as a demonstration of Amateur Radio's role in emergency preparedness and in the hope that Bush would be willing to address the 75-meter net. Hearing the president check into the net was a pleasant surprise, Hubbard said.

ARRL President Jim Haynie, W5JBP, said he was "extremely gratified" that President Bush recognized the valuable service Amateur Radio operators provide in times of emergencies. "I know that all hams in the United States stand ready to do their part in America's Homeland Security Program," Haynie commented. Haynie has said that defining Amateur Radio's role in homeland security would top his list of initiatives for his second term.

Hubbard said a copy of proposed expanded Amateur Radio antenna (PRB-1)legislation was given to the President and to the president's brother, Florida Gov Jeb Bush, for possible introduction in next year's Florida legislative session. "We Amateur Radio operators will volunteer however we're needed, and maybe it will be seen that we can greatly help the nation if we have the antennas we need," Hubbard commented. The proposed bill would seek to extend Florida's PRB-1 law to include private deed covenants, conditions and restrictions.

Bush's stop in Florida was part of a swing through the southeastern US, which also included stops in North Carolina and Georgia. The Daytona Beach event marked a rare appearance on ham radio by a sitting president. Former President Gerald Ford spoke via a ham radio satellite hookup in 1986.

==>ARRL GOING TO THE MAT ON 70-CM BAND THREAT

ARRL officials met recently with FCC staff members as part of the League's effort to stave off a band threat on 70 cm. ARRL General Counsel Chris Imlay, W3KD, and Technical Relations Manager Paul Rinaldo, W4RI, delivered an ex parte presentation to FCC Office of Engineering and Technology staffers on January 14. At issue was SAVI Technology's plan--already tentatively agreed to by the FCC--to deploy unlicensed transient RF identification devices between 425 and 435 MHz at much higher field strengths and duty cycles than Part 15 rules now permit for such devices. RFID tags are used to track and inventory parcel shipments.

"We told them that this was the worst possible choice of bands for these RFIDs," Imlay said. "Besides, there's no technical justification for that choice of frequencies." The request to use 70 cm has more to do with economics than technology, he said, because SAVI needs to bring down the cost of RFIDs in order to make a profit.

Imlay added that the ARRL would "do whatever it takes" to stave off the threat, including further direct appeals to FCC staff. The ARRL plans to file "strongly worded" comments on the SAVI petition by the February 12 comment deadline. Reply comments are due by March 12, 2002. Imlay said he was assured that SAVI's request "was not a done deal."

The FCC acted on the SAVI request last October in an FCC Notice of Proposed Rule Making and Order (ET Docket 01-278). The ARRL argued in comments filed last March that the field strengths and duty cycles SAVI proposed for its RFID tags as Part 15 "periodic radiators" were unreasonable and "would undoubtedly seriously disrupt amateur communications in one of the most popular of the Amateur Service allocations," particularly for weak-signal enthusiasts.

The League also believes the FCC lacks the statutory authority to permit the RFID tags under its Part 15 rules in the configuration SAVI has requested. The ARRL argues that under the Communications Act of 1934, such devices with substantial interference potential must be licensed. The ARRL also has suggested that SAVI pick one of the Industrial, Scientific and Medical (ISM) bands instead of 425-435 MHz.

The ARRL's January 14 ex parte presentation was complemented by an interference study prepared by ARRL Lab Supervisor Ed Hare, W1RFI, and ARRL Senior Engineer Zack Lau, W1VT. A copy of the interference study and more information is available on the ARRL Web site "Band Threats" page <http://www.arrl.org/announce/regulatory/rm-1005/SaviExParte.pdf>.

==>ARRL MEMBERS' DONATION TO HELP PRESERVE AMATEUR RADIO HISTORY

A generous donation from an Amateur Radio couple from Dallas will support the ARRL's efforts to preserve ham radio's history. ARRL Chief Development Officer Mary Hobart announced the contribution from Barry Merrill, W5GN, and Judith Spencer Merrill, KA5PQD, this week. The Merrills are ARRL life members.

"ARRL is proud to acknowledge the Merrills' exceptional generosity in support of the Preservation of Artifacts Fund," Hobart said. "Their donation is dedicated to the conservation of the valuable books, papers and artifacts that define the history of Amateur Radio."

The Merrills' desire to contribute was prompted in part by recent exploratory efforts--primarily by ARRL Pacific Division Director Jim Maxwell, W6CF, and his wife, Trudy, KC6NAX--to assess and inventory papers, pamphlets, correspondence and photographs now stored in an attic room at ARRL Headquarters.

The Merrills said the recent discovery of very early correspondence and documents by the founders and early leaders of Amateur Radio "comprise a unique history that will be lost forever without archival preservation." They expressed the hope that the documentary materials one day might be made accessible to the public, at least in digital form.

The ARRL Historical Committee, chaired by New England Director Tom Frenaye, K1KI, says the Maxwells' efforts helped increase sensitivity to the historical importance and value of some of the items on display or in daily use at Headquarters. For their part, the Maxwells say the uncatalogued material in the attic was the tip of the iceberg of a possible historical treasure trove.

In his report to the Historical Committee, Maxwell emphasized the importance of moving the documents and photographs into a more friendly environment. The Historical Committee wants to be able to inventory and store as many of the documents and photographs as possible over the next few months.

Hobart invited other League members to join the Merrills in helping to conserve Amateur Radio's documentary history. "The conservation project supported so generously by Barry and Judy Merrill will take months, if not years," she said. "If you would like to join them in building the historical record of ARRL, we would be pleased to hear from you."

Contact Chief Development Officer Mary Hobart, mhobart@...; 860-594-0397, or send contributions to the Preservation of Artifacts Fund, c/o Chief Development Officer Mary M. Hobart, ARRL, 225 Main St, Newington CT 06111.

==>ARRL FIELD DAY, AFFILIATED CLUB COMPETITION CHANGES ANNOUNCED

The ARRL has adopted rule changes affecting Field Day and the ARRL Affiliated Club Competition program. The primary Field Day change--effective with this year's event June 22-23--phases out the Novice-Technician station and replaces it with a new station category, the "Get-On-The-Air"--or GOTA--station.

A GOTA station is intended for operation by Novice and Technician operators or by generally inexperienced or inactive amateurs as well as by as-yet-unlicensed or "under-licensed" operators working under the privileges of a licensed control operator (third-party traffic rules apply--see the International Third Party Traffic page on the ARRL Web site <http://www.arrl.org/FandES/field/regulations/io/3rdparty.html>). Under the revised rules, any Class A Field Day entry operating at least two transmitters may include a GOTA station, which will not count as an additional transmitter for the purpose of entry category.

The GOTA station may operate on any Field Day band and mode, but only one GOTA transmitter may be in use at any given time. The GOTA station may complete up to 400 QSOs to be counted toward the group's total Field Day score. A Field Day group can claim 100 bonus points if its GOTA station successfully completes 400 QSOs. The GOTA station does not affect the additional VHF/UHF station provided under Field Day rule 4.1.2.

Field Day 2002 will mark the first in which stations throughout the Americas have been invited to participate. As approved at the July 2001 ARRL Board of Directors' meeting, all International Amateur Radio Union Region 2 countries--North and South America--may take part in Field Day starting this June.

Complete Field Day rules and information packet will be available on the ARRL Web Contest Forms and Rules page <http://www.arrl.org/contests/forms> in early February. Field Day 2002 pins and T-shirt may be ordered now via the ARRL Web catalog <http://www.arrl.org/catalog/?category=&words=Field+Day+Pin>.

Changes to the ARRL Affiliated Club Competition program also were included in the report of the Membership Services Committee (MSC), presented to the ARRL Board of Directors at its January meeting. In accordance with the advice of the ARRL Contest Advisory Committee, five specific affiliated club competition changes will go into effect November 1. Under the revised rules:

* The requirement that a member must attend at least two club meetings a year in order to be allowed to submit a score for a club in the unlimited and medium categories has been altered. The new rules will allow participation by "a member in good standing, as defined by the club."

* Medium and unlimited clubs now may define their club service area either as a 175-mile radius circle or as an entire ARRL section. This change will allow clubs from larger states that encompass entire ARRL sections to compete with each other.

* The percentage of operators who must be members of a club in order for the club to claim a score from a multioperator station has been reduced from 66% to 50%.

* A station owner no longer must be a member of a club in order for a guest operator at the station to claim the score for that club.

* Canadian clubs that are full Radio Amateurs of Canada affiliates now may participate in the ARRL Affiliated Clubs Competition.

These changes affect ARRL contests that include a club competition--January VHF Sweepstakes, the ARRL International DX Contest, the September VHF Party, the ARRL November Sweepstakes, the ARRL 160-Meter Contest and the ARRL 10-Meter Contest.

Complete rules for all ARRL-sponsored operating events are available on the ARRL Web site <http://www.arrl.org/contests/announcements/>. For more information, contact ARRL Contest Branch Manager Dan Henderson, N1ND, n1nd@....

==>RFI COMPLAINTS, CITY COUNCIL INVOLVEMENT FRUSTRATE MICHIGAN AMATEUR

Rob Underwood, W8YRB, says RFI complaints have him at his wit's end. The Wyoming, Michigan, ARRL member says his efforts to resolve some neighbors' complaints of stubborn interference are at an impasse. To add to his frustration, the Wyoming City Council now has asked the FCC to step in, and the situation has erupted into a media spectacle that, he says, hasn't done much for ham radio's image.

The FCC's position with respect to RFI to consumer devices is that the consumer device--telephone, stereo, TV or other appliance--most often is to blame, and that consumers need to deal with appliance manufacturers.

Underwood says he's gone the extra mile to resolve interference complaints, but one neighbor a half block away has become especially intractable, pinning blame for interference to her telephone and touch lamp squarely on him. The woman ultimately complained to the city council, which met January 21 and unanimously agreed to contact the FCC.

Underwood said city council members "threw their hands in the air, and most of them said it was my station that needed to be 'filtered' and didn't want to hear what my solutions were." Twenty one amateurs reportedly attended the council meeting on Underwood's behalf, and one Council member praised Underwood's attempts to assist and to educate everyone.

Underwood said, however, that several other neighbors turned up at the session with new RFI complaints he hadn't heard before. He's volunteered to assist them. Underwood says media coverage has focused on the neighbors' complaints rather than on his efforts to respond to them.

The neighbor's touch lamp seems especially susceptible to RFI and even flickers when he keys his 100-W mobile transmitter while driving by her house, Underwood said. Although he installed some ferrite chokes on the lamp's power cord, the problem persisted. The neighbor has refused further offers of help.

Underwood reports that his own home is essentially free of RFI problems, with the exception of his cordless telephones when he runs his amplifier. He said he installed RF chokes on telephone equipment for his immediate neighbors who had complained of problems, and they have not reported any interference since.

Underwood has the full support of ARRL Michigan Section Manager Dick Mondro, W8FQT, who noted that the FCC Detroit Field Office was also aware of the problem and has been cooperating in resolving the issue.

ARRL provides information and resources to deal with RFI problems on the ARRL Web site's RFI pages <http://www.arrl.org/tis/info/rfigen.html>.

==>NEW RECORDS SET AT 241 GHZ AND 322 GHZ

Contacts made in mid-December "on the ultra-highs" by microwave enthusiast Brian Justin, WA1ZMS, set new North American records on two bands that amateurs don't encounter routinely--241 and 322 GHz.

On December 15, Justin, operating W2SZ/4 in Virginia, made contact with Gordon Howell, WA4RTS/4, on the 322-GHz band "over a whopping distance of 0.05 km (about 164 feet)," he said. Both stations were located in FM07ji.

"I know it's not much as far as DX is concerned, but it's on par with DB6NT's 411-GHz DX record and is a North American first for the 300-GHz band, excluding light," he added.

About an hour later another QSO was made between W2SZ/4 and WA4RTS/4 on 241 GHz over a distance of 1.1 km (approximately 3609 feet). "This is a North American first for the band and a new NA record at the same time," Justin said.

Both contacts were made using modulated CW and wideband FM receivers. The power output on 322 GHz was estimated to be just a few microwatts, while the power on 241 GHz was measured at 0.75 mW. The stations were constructed of 80.6-GHz free running Gunn oscillators driving GaAs diode triplers. Both setups used homebrew six-inch parabolic dishes with hyperbolic

sub-reflectors.

Justin said the next step is to phase-lock the Gunn oscillators to crystal oscillators in the future to permit using narrowband modulation, "thus resulting in better DX." WA1ZMS estimated that over the span of his ham radio career, he's operated at least once on every available Amateur Radio band.

==>SOLAR UPDATE

Solar seer Tad Cook, K7VVV, Seattle, Washington, reports: Average solar flux was up nearly 30 points this week, and average sunspot numbers rose by nearly 15. Solar flux peaked on Tuesday at 261 and is probably headed down for a while. Predicted solar flux for Friday through Monday is 250, 245, 240 and 235.

There was an M-1 solar flare at 2005 UTC on Saturday, and the flare may have enhanced the daily solar flux reading for that day--which was 256.5. This reading is at noon local time (2000 UTC) in Penticton, British Columbia, but there is also a morning reading and a third one in the afternoon. The morning reading for that day was 244.1 and the afternoon flux was 248.8.

Saturday's flare didn't cause any noticeable geomagnetic disturbance. Friday had a brief period when the planetary K index was 4, and the high-latitude Alaska College K index was 5, but the rest of the period was so quiet that, for all week, the A index was in the single digits.

Sunspot numbers for January 24 through 30 were 173, 196, 194, 189, 207, 214 and 210, with a mean of 197.6. The 10.7-cm flux was 230.8, 234.8, 256.5, 248, 259.8, 261 and 256.3, with a mean of 249.6. Estimated planetary A indices were 4, 8, 7, 7, 6, 4 and 3 with a mean of 5.6.

==>IN BRIEF:

* This weekend on the radio: The North American Sprint (SSB), the Vermont, New Hampshire, Minnesota and Delaware QSO parties, the 10-10 International Winter Contest (SSB), the FYBO Winter QRP Field Day, and the Mexico RTTY International Contest are the weekend of February 2-3. JUST AHEAD: The ARRL School Club Roundup is February 11-16. The North American Sprint (CW), the Six Club Second Winter Contest, the CQ/RJ WW RTTY WPX Contest, the Utah QSO Party, the Asia-Pacific Sprint (CW), the Dutch PACC Contest, the YL-OM Contest (CW), the FISTS Winter Sprint, the RSGB 1.8-MHz Contest (CW) and the QRP ARCI Winter Fireside SSB Sprint are the weekend of February 9-10. See the ARRL Contest Branch page, <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar, <http://www.hornucopia.com/contestcal/index.html> for more info.

* Amateur Radio Emergency Communications Course registration: Registration for the Level I Amateur Radio Emergency Communications Course (EC-001) will open Monday, February 4, 2002, 4 PM Eastern Time. Registration for Level II will open on Monday, February 11; registration for Level III will open

February 18. Courses must be completed in order, starting with Level I. To learn more, visit the ARRL Certification and Continuing Education Web page <http://www.arrl.org/cce> and the C-CE Links found there. For more information, contact Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* Mystery satellite identified: AMSAT News Service reports that a "mystery satellite" that had been transmitting frequency-modulated AFSK and CW on 144.100 MHz for several days was identified as MAROC-TUBSAT, an Earth-sensing spacecraft owned by the Royal Center for Remote Sensing--a Moroccan government agency. The satellite was placed into a polar orbit by a Russian launcher on December 10. When informed of the interference to amateur operations, the agency immediately shut down the 144.100-MHz transmitter. MAROC-TUBSAT also has a downlink at 436.075 MHz, which is switched on over North Africa and Europe when the control stations in Morocco and Germany are active. It has not been heard elsewhere. IARU Satellite Adviser Hans van de Groenendaal, ZS6AKV, is seeking more information from ARRAM--the Moroccan national radio society.--ANS via Ray Soifer, W2RS

* Broadcasters may borrow amateur band for Winter Olympics coverage: The FCC has granted the Salt Lake Organizing Committee a Special Temporary Authority to utilize the 13 centimeter band (2300-2305 and 2390-2450 MHz) for broadcast auxiliary operations at Olympic venues through March 1. While the STA does not forbid amateur use of the band between now and then, it does authorize the Broadcast Auxiliary Service as a co-secondary user until March 1. "These types of STAs are not unusual during major broadcast events, and the Olympic Games qualify," said ARRL regulatory correspondent Brennan Price, N4QX. The FCC has designated the Salt Lake Organizing Committee as the single point of contact for coordinating operations under §74.24 of the Commission's rules through March 31, 2002, for the 2002 Winter Olympic Games and Paralympic Games to be held in Salt Lake City, Utah.

* Olympic site is NOAA Weather Radio-ready, thanks to hams: With the help of local Amateur Radio operators in the Park City and Salt Lake City, Utah, area, the Olympic village in Park City has 24-hour NOAA Weather Radio coverage. "There was absolutely no weather radio coverage in Park City due to the mountain range between our SLC transmitter and Park City," said Joe Lachacz, KF6NHD, a NOAA Weather Radio Specialist. Steve Mainwaring NZ6Z, Don Lloyd, KD7BA, and Greg Lundell, K7UHP, installed the NOAA Weather Radio on Quarry Ridge in Park City. Olympic venues in Park City include bobsledding, luge and downhill skiing.--Joe Lachacz, KF6NHD

* Alan H. McMillan, W0JJK, SK: Alan McMillan, W0JJK, of Council Bluffs, Iowa, died January 15. He was 71. An ARRL member for more than 50 years, McMillan was perhaps best known to an earlier generation of amateurs as the sales manager for World Radio Labs (WRL), where he also contributed to the design of the Globe series of transmitters. Later, he worked on Galaxy radios--also part of the ham radio line offered by WRL's Leo Meyerson, W0GFQ. After retiring from WRL, McMillan founded Hobby Industries, selling ham gear and, until his death, operating Hi-Manuals

<http://www.hi-manuals.com/HomePage.htm>, which continues to offer reprints of operating and service manuals for older ham gear.

* FCC converting ATINs to FRNs: Acronym alert! Acronym alert! Everyone to get from street! (with apologies to the old movie, The Russians are Coming, the Russians are Coming!) The FCC is completing the conversion of Assigned Taxpayer Identification Numbers (ATINs) to Commission Registration System (CORES) FCC Registration Numbers (FRNs). ATINs were issued to amateur applicants--to clubs and to non-US citizens--who did not qualify for a Social Security Number, so they could register for the FCC's Universal Licensing System (ULS). The FCC issued most ATINS, but some were issued by a Volunteer Examiner Coordinator (VEC) or Club Station Call Sign Administrator (CSCSA). An FCC spokesperson said all ATINs should be converted to FRNs by mid-February. The FCC has discontinued the use of ATINs, since the CORES registration process provides an exception for club stations and non-citizens to obtain an FRN. The FRN then may be used to access the ULS, which incorporates the Amateur Service licensing database (among other services).

* Man injured installing antenna: The Electrical Contractor Network <http://electrical-contractor.net/> reports that an Indiana man--apparently not an amateur--was critically burned when the antenna he was trying to install came in contact with an overhead power line. The account says that 21-year-old Steven Long of Brazil suffered third-degree burns over half his body in the incident, which also burned the tree to which he was attaching the antenna. When emergency workers arrived, they found the antenna draped across the power line, the tree charred from the fire and Long hanging onto a lower branch. Brazil firefighters had to wait for utility workers to cut power to the line before they could rescue Long. See the Electrical Contractor Network Web site <http://electrical-contractor.net/ubb/Forum14/HTML/000146.html> for additional details.--submitted by George Corron, AF4JH

* Hamfests change dates: Radiofest 2002 in Monterey/Seaside, California, has changed its date to February 23. The hamfest, sponsored by the Naval Postgraduate School Amateur Radio Club, will be held at the General Stilwell Community Center (old Fort Ord), 4260 Gigling Rd. For more information, contact chairman Brian Broggie, W6FVI, w6fvi@..., or visit the Radiofest Web site <http://www.k6ly.org/radiofest>. The Red River Radio Amateurs have changed the date of their hamfest in West Fargo, North Dakota, to March 16 at the Red River Valley Fairgrounds. For more information, contact Mike Woytassek, N0VGV, mikew@..., or visit the club's Web site, <http://www.rrra.org>.

* AMSAT-UK colloquium seeks papers: The 17th AMSAT-UK Colloquium, set for July 26-28 at University of Surrey, Guildford, Surrey, United Kingdom, invites speakers to submit papers about Amateur Radio space and associated activities, both for the event and for the Proceedings, to be published following the event. Authors are asked to present their papers in person if possible. Offers of papers should be submitted as soon as possible; the final date for full documents to be received is mid-June 2002. Send

submissions to Richard Limebear, G3RWL, g3rwl@..., or to 60 Willow Rd, Enfield EN1 3NQ, UK. AMSAT-UK also invites suggestions for program topics. This year's Colloquium will include sessions aimed specifically at beginners to Amateur Radio satellite operating.--ANS via Richard Limebear, G3RWL

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the

message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

482. Golden Fox Hunt - 2002

Yahoo group: m_a_r_s
Date: 2002-02-06 07:15:05 UTC
From: vu2nlf

MUMBAI AMATEUR RADIO SOCIETY

Dear Friends,

MARS conducted the first ever FOX HUNT in Mumbai on 27th January 2002.

The Participents.

Team [A] - VU2ESP - Jayesh Kharwar & VU2UGO - Sandip Adiwarkar.
Team [B] - VU2SWS - Sarla Sharma, VU2NFS - Nafisa Shikari & VU3PAN - Pravin Panchal.
Team [C] - VU2HIT - Huzefa Merchant & [SWL Grade - I] - Parin Gangar.
Team [D] - VU2SXF - Sandesh Kamat & [SWL Grade - I] - Ivor Pereria.
Team [E] - VU2MOO - Milind Mokashi & VU3MBF - Mehul Chovatia.
Team [F] - VU2UGJ - Mukesh Jaitley & VU3AUA - Arun Singh.
Team [G] - VU3KUN - Kunal Mashru & VU2JPN - P.V. Jaiprakash.
Team [H] - VU2RIO - Pankah Pasad & [SWL] - Nepolean Modi.
Team [I] - VU2CBU - Prasant Koli & [SWL]

And Many SWLs.

The Event was Conducted by VU2ZRS - Zyros Zend assisted by VU2NLF - Nilesh Rathod.

The event with at 09:00 am with a Treasure Hunt which was participated by many hams with their family and friends. The Treasure of the Hunt was the the frequency of the FOX and the General Area Map for the FOX HUNT. The winners for the Treasure hunt were - VU3MBF - Mehul Chovatia & VU2MOO - Milind Mokashi.
ofcourse eventually all teams completed the Treasure Hunt.

The Fox is a QRP VHF set pushing out 20 Milliwatts of Power with a rubber duck antenna, it has a timer cycle of 8 seconds on/off, it has a tone generator which goes Beep Beep Beep.....
The Fox was hidden in the Concrete Jungle with densely populated RCC Buildings in Flora Fountain & Nariman Point Area, (where the signals bounces like Crazy).

All teams were equipped with DFE (3 element Yagi Antennae, Attenuetors, HeadSets and Handies with Bar Graph)

Official Necessary Permissions were obtained from the WPC to conduct this event.

At 11:00 hours the FOX HUNT began, Team were seperated and started from different locations on intervals.
all the Teams started in their vehicles and once they got the first signal of the FOX, they were on their foot.
At 11:35 Team - B [VU2SWS,VU2NFS & VU3PAN] zeroed in, they were the first ones to catch the Fox.
by 12:15 all the teams had located the fox (Wonderful I would say for the First time ever).

On Demand we immediately conducted a Second fox Hunt, This time Team [A] - VU2ESP & VU2UGO zeroed in first in about 40 minutes time, ofcourse the rest of the teams followed expect for one.

Prizes were awarded to the winners of the Treasure Hunt , The first Fox Hunt & The Second Fox Hunt.
All the participents celebrated with a well deserved Lunch their after.

The Event was a Great Success mainly because of the Huge efforts by VU2ZRS - Zyros, VU2UGO Sandip, VU2HIT - Huzefa, VU3MHC - Minoo, VU2SXF - Sandesh and many other MARS members..

MARS plans to conduct the many many FOX HUNTs (Complex ,Tricky and Slimy ones) in the near future.

MUMBAI AMATEUR RADIO SOCIETY

Dear Friends,

MARS conducted a HAM RADIO Workshop at I.I.T , Powai, Mumbai on 1st/2nd/3rd February 2002.

The Participants.

VU2UGO - Sandip Adiwarkar.
VU2SWS - Sarla Sharma
VU2NFS - Nafisa Shikari
VU3PAN - Pravin Panchal.
VU2HIT - Huzefa Merchant
VU2SXF - Sandesh Kamat .
VU2UGJ - Mukesh Jaitley
VU3AUA - Arun Singh.
VU2JPN - P.V. Jaiprakash.
VU2CBU - Prasant Koli
VU2NLF - Nilesh Rathod.
[SWL Grade - I] - Parin Gangar.
[SWL Grade - I] - Ivor Pereria
[SWL Grade - I] - Sumeet Bal.
And Many SWLs.

140 students participated in the 3 day workshop (although IIT had received 367 applications from all over India) but due to the limitions of the capacity of the Audio-Visual Room, 140 students were admitted.

The Programme

DAY - 1 (Friday 1st February 2002).

15:30 Hours : A PowerPoint presentation on Ham Radio Covering the following:-
17: 30 Hours 1. The Origin Of Radio
2. The Inventors.
3. The History of HAM RADIO.
4. What you can do with Ham Radio.
5. All different modes of communications.
6. Public services with Ham Radio.
7. In depth information on Digital & Satellite Communication.
8. Ham Protocols.
9. How to become a HAM. (Examination & Licences)
10. Cost and owning Ham Equipment.

DAY - 2 (Saturday 2nd February 2002).

09:00 Hours : A PowerPoint presentation on Technical side of Ham Radio Covering the following:-
10: 30 Hours 1. Basic electronics. (receiver, Transmitter, Transducer etc etc.....)
2. Propagation.
3. Antennae (Omni, BI, and Uni Directional antennae for HF/VHF/UHF communication)
10. Cost and owning Ham Equipment.

15:30 Hours : A Live Demonstration was given on the following:-

1. VHF communication (Voice)
2. VHF communication (Digital) Laptop to Laptop (SSTV, RTTY,PSK31)
3. HF communication (Voice)
4. HF Digital (SSTV / RTTY, PSK31)

DAY - 3 (Sunday 3rd February 2002).

09:00 Hours : A PowerPoint presentation on Ham Radio & Disaster Management Covering the following:-
10: 30 Hours 1. Understanding Disasters. (Natural & Manmade)
2. Why Ham Radio. (Efficiency over other Govt & Non Govt Organisations)
3. Trishna Millinium Expedition - A True Story.
4. BHUJ Earthquake - A True Story.
5. WTC in USA - A True Story.

15:30 Hours : A FOX HUNT in the IIT Campus.
63 SWLs participated with HAM in the wonderful Hunt for the FOX.
by end of the day their excitement was beyond and bounds.

MARS conducted this workshop with total dedication and commitment (Without charging anything).

OUR REWARD:-

At the end of the 3 day session 132 participents have shown keen interest in become a HAM.

Our Request :-

MARS is already conducting HAM Radio classes in Mumbai, it also plans to start a special batch at IIT , Mumbai. But many of the participents were not from Mumbai (From All over India) , hence we have given them the contact information of the Local Ham in their area.

IF some of these guys calls you up for help and assistance in becoming a HAM, PLEASE DO THE NEEDFUL....!!!!

We are very grateful to IIT, Mumbai for including HAM RADIO in TECHFEST 2002, we also thank them for inviting us to give the presentations..

484. Fw: [RADIOHAMS] The Repeater Telemetry Project

Yahoo group: m_a_r_s
Date: 2002-02-07 03:47:02 UTC
From: Huzefa
Topic: 484 Message: 484

A well done observation on part of UPX as regards to setting up repeater in Punjab(I hope he adopts Punjab as his native resident or rather they adopt him as a resident Hams),.....continuing with his observation on repeaters if he had worked on the Mumbai repeater he would have not face any elevation problem nor technical,manpower . why can he concentrate more on the mumbai repeater lying unused for last 5 years

Hope better understanding prevails on UPX

AMEN

huzefa merchant

Subject: [RADIOHAMS] The Repeater Telemetry Project

A repeater telemetry project is actually thought of , when , after much endeavour, the Punjab Amateur Radio Society (India) managed to get a Licence for setting up a VHF repeater in this area. The location of the repeater is at Sri Nina Devi, which is a hill temple town at an elevation of 4500ft. Furthermore, it is approximately near the confluence of three states (Punjab, HP and Haryana in INDIA) and Chandigarh UT. The only problem is that the area is quite remote and at least 3-4 hours of a hilly drive from most ham stations. so the repeater has to be unmanned and remote.

So there is a need to monitor its working parameters like SWR, Heatsink temperature, standby battery voltage, AC line voltage etc probably wind speed later. This would give the caretakers an indication when to get ready for a busy weekend on the hilltop.

There are probably readymade projects for this, but they are either exorbitant or not suited for amateur radio use. Luckily we have someone with a good experience in using microcontrollers, and hence we wish to embarked on this project.

Basically we are planning to take / connect various sensors to the Atmel microcontroller, which will take commands from a DTMF decoder connected to the repeater audio. The sensor output will then be translated to voice using a addressable ISD voice recorder, and fed to the repeater microphone input and also the PTT. We are facing problems interfacing an LM3914 based SWR meter and battery voltage monitor. Hence a thought of using a ADC chip (ADC0809) instead.

Now it is felt (suggested) that a separate UHF link (315 MHz) be used for general monitoring and control of the Remote Repeater Station. This would have the advantage of no interference with the operating of the repeater and yet have total control on it.

Now we have available technology to make it happen using fewer and better components to accomplish our goal.

For this we have shortlisted the following group of components for the job :

Microcontroller
AT89C51

ADC
ADC0809

Receiver for the telemetry link.
MAX1470, MICRF022,

Transmitter for the telemetry link
RF2516, RF2512

We invite suggestion and contribution from this members in this group and open this project for discussion

==>ARRL UNVEILS ANTENNA MODELING COURSE

The ARRL Certification and Continuing Education Program soon will offer its
first technical course--Antenna Modeling. Written by the well-known author
and historian L.B. Cebik, W4RNL, and edited by ARRL Senior Assistant
Technical Editor--and antenna guru--Dean Straw, N6BV, the course offers
students a hands-on tutorial. Registration for Antenna Modeling (EC-004)
will open Monday, February 11.

The course has been through extensive beta testing during the past several
weeks, and even the experts found they'd picked up some new knowledge on the
subject. "I've been modeling antennas using a computer for about 15 years,
and I certainly learned a great many things in this course," Straw
commented.
```

ARRL Certification and Continuing Education Program Coordinator Dan Miller, K3UFG, said the experts agreed that the best method to master the art and science of antenna design and analysis was to become familiar with the basic concepts of computerized antenna modeling and modeling software. "Using computer simulations--models--you will study the performance of a wide variety of antennas, without having to invest in a test range or a room full of test equipment," he said. "In this course, students will learn to master the basic techniques of constructing good models."

Several excellent and affordable antenna modeling software packages are available. The course will illustrate the elements of modeling antennas using two of the most popular packages based on the NEC-2 core--EZNEC 3.0 by Roy Lewallen, W7EL <http://www.eznec.com/> and NEC-Win Plus by Nittany-Scientific <http://www.nittany-scientific.com/>.

Beta testers offered positive feedback after completing the course. "What a gold mine of information!" said Dan Maguire, AC6LA. "I found myself looking forward to taking the next lesson just to see what new things I could learn." Former ARRL staff member Chuck Hutchinson, K8CH, also took a crack at the program. "Wow, I sure learned a lot about antenna modeling!" was his reaction.

Students will have up to 12 weeks to complete the course material. "There are 31 lessons, and you should plan to spend one to two hours per lesson," Miller advised. The inaugural class begins Tuesday, February 26 and wraps up Tuesday, May 21.

A sample lesson based on the actual Antenna Modeling course is available on the ARRL Web site <http://www.arrl.org/cce/sample-lesson/>. Registration for the new Antenna Modeling course opens Monday, February 11, at 4 PM Eastern Time on the ARRL Course Registration page <https://www.arrl.org/forms/cce/>. The registration fee is $80 for ARRL members and $110 for nonmembers. Continuing Education Units (CEUs) are available for all ARRL C-CE courses.

Answers to most questions are available on the ARRL Certification and Continuing Education home page <http://www.arrl.org/cce> and the associated C-CE links. To learn more, contact ARRL Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

==>FCC TO CHECK GETTYSBURG MAILROOM FOR ANTHRAX

The FCC says it's making arrangements to test for possible anthrax contamination at the off-site mailroom serving its Gettysburg, Pennsylvania, office. This week's announcement follows the suspension of US Postal Service deliveries to the FCC's off-site mail facility in Capitol Heights, Maryland, after "a scant amount of anthrax contamination" was detected January 29 during US Public Health Service testing. The Gettysburg testing would be "a further precaution," the FCC said.

The FCC's Gettysburg office deals with Amateur Radio licensing and enforcement matters, including vanity call sign processing. Since last fall's anthrax scare, the Gettysburg office has been providing special handling for its own incoming mail at an off-site facility.

Before arrangements were made for the offsite facility, some FCC-Gettysburg mail was sent to Washington for decontamination along with other FCC mail. Apparently waylaid in the process was mail containing paper Amateur Radio vanity call sign applications for the last couple of weeks in October, forcing the FCC to halt all vanity processing. The FCC reports it's been able to contact most vanity applicants and have them resubmit their applications. So far, the FCC has processed vanity applications received through October 22. (The FCC advises anyone who believes their paper vanity applications might have been affected and cannot locate the application on the ULS Application Search <http://wireless.fcc.gov/uls> should resubmit their application.)

There is no indication that the Gettysburg mailroom testing announced this week would further complicate or delay vanity call sign processing or the handling of applications filed on paper. Since last fall, the Commission has been urging everyone to file applications and documents via e-mail or fax whenever possible. Vanity electronic and paper applications have equal processing priority, however.

The Center for Disease Control this week completed follow-up testing of the anthrax trace discovered at Capitol Heights. The CDC reported to the FCC that the trace "showed a very slow platelet growth, which indicates a weak or very scant amount of anthrax consistent with cross-contamination of mail," the FCC said in a statement. As a result, the FCC said, it was making arrangements for the Capitol Heights mail processing area to be decontaminated and retested as soon as possible before permitting mail service to resume.

The FCC moved its mail reception, processing and screening center out of FCC headquarters in Washington, DC, to the Maryland facility after the initial anthrax contamination incident on Capitol Hill last fall. The FCC has been updating a "Fact Sheet" posted on its Web site.--FCC

==>MONTANA HIGH SCHOOLERS POSE TOUGH QUESTIONS VIA HAM RADIO

Tough questions posed by a high school group required some thoughtful and detailed answers from astronaut Dan Bursch, KD5PNU, February 1 during a Amateur Radio on the International Space Station (ARISS) contact. Operating NA1SS, Bursch represented the ISS Expedition 4 crew during an interview with seven physics students at Butte High School in Butte, Montana. The Q-and-A session was the crew's second school contact arranged by ARISS--a cooperative effort of AMSAT, ARRL and NASA.

Student Oliver Huang wanted to know whether chemical reactions that normally precipitate on Earth do the same in microgravity, and whether bones heal the same in space as on Earth. Bursch explained that aboard the ISS, some chemical reactions work differently because the densities of various compounds cause them to mix in unexpected ways. "For example, hot air doesn't rise," he pointed out. As for broken bones, Bursch speculated that that there might be a need to replicate the stress of gravity on a fracture in order to get broken bones to knit properly in microgravity.

Student Lori Stenson wanted to know how long an astronaut's oxygen supply lasted during a space walk. Bursch said it depends in part on the type of suit used, but for the Russian suits, the outside limit was about nine hours. "The actual limitation is not the oxygen but the lithium hydroxide that scrubs out the CO2," he explained. In response to another student's question, Bursch explained that the spacecraft is equipped with oxygen-scrubbing devices supplemented by fresh oxygen from Earth. "We do try to recycle as much as we can," he said.

In responding to a question from student Michelle Shannon about the detrimental effects of a lack of gravity, Bursch said he probably wouldn't notice them until he returned to Earth. The crew will spend about five and a half months in space.

Bursch and his crewmates Yuri Onufrienko, RK3DUO, and Carl Walz, KC5TIE, were passing over Australia at the time, and radio contact was made via Tony Hutchison, VK5ZAI. The contact marked Bursch's debut in handling questions from students via ham radio. Bursch reportedly already has done some casual hamming during his tour.

"This was absolutely fantastic!" enthused coordinating teacher Sandy Shutey after the contact. "It's one of the best things we've ever done!" She said the event was a hands-on culmination several-months' study of space topics on the part of her students.

Since the first crew came aboard the ISS in November 2000, 40 schools and other educational institutions have made successful contacts via ham radio with ISS crew members. For more information, visit the ARISS Web site <http://ariss.gsfc.nasa.gov>.--Gene Chapline, K5YFL/ARISS

==>HAMS ASSIST AILING SAILBOAT PASSENGERS

Amateur Radio operators have once again been instrumental in getting prompt assistance to sailboat passengers needing emergency medical attention.

On January 30, Marsha Stone, XE2/KF6TIQ, was scuba diving at 77 feet off Mexico when she encountered problems while surfacing. It's believed that she developed a pulmonary embolism as a result of the dive. She also was exhibiting possible neurological symptoms. Stone was aboard her sailboat She Wolf with three other passengers at the time, including her sister. Other amateurs sailing in the vicinity came to Stone's aid.

Members of the Intercontinental Net on 20 meters learned of the situation and offered to help. Bob Botik, K5SIV, in Austin, Texas, phone-patched Stone to her personal physician, who advised that she needed to get to facilities in Cabo San Lucas as soon as possible.

Meanwhile, aboard the sailing vessel Spirit Quest, Kathy Brownell, W6ATM, and her physician-husband Doug rendezvoused with Stone's vessel, and the couple was able to provide oxygen and comfort to the victim as well as transport to the Naval Landing Station at Socorro Island, Mexico, for an airlift.

Also rendering aid was Barb Campbell, XE2/KB0RIZ, a registered nurse aboard the sailing vessel Blue Chablis. Campbell's vessel reportedly stayed alongside Spirit Quest throughout the night to lend assistance when the victim's boat arrived at Socorro. The She Wolf and Spirit Quest maintained contact on marine VHF frequencies.

"This was a wonderful group effort of humans who had ham radio," Botik said.

Stone was transported to Cabo San Lucas the following day. Botik reported this week that he'd spoken to Stone and that her spirits were high. He said she had undergone treatment in a hyperbaric chamber, and, as of February 5, was able to stand and walk without assistance. "She continues her recovery," he said.

On February 4 a woman identified as Miranda Middleton--an Australian national in her mid-20s--became seriously ill while aboard the sailing vessel Baggywrinkle in the Caribbean. Skipper Benjamin Shaw, KG4OAQ, got on 20 meters to seek assistance on the Intercontinental Net. Unable to copy Shaw well, Dave Franke, WA5EZW, alerted Ed Petzolt, K1LNC, in South Florida by telephone.

No stranger to dealing with maritime emergencies via ham radio, Petzolt contacted the US Coast Guard in Miami, which patched him through to its San Juan, Puerto Rico, station. The US Coast Guard in turn contacted Coast Guard officials in St Vincent and the Grenadines. Coast Guard detachments in the US and in the Grenadines came up on frequency, and Petzolt was able to relay information between the Coast Guard and Shaw's vessel as necessary.

Middleton was picked up by the St Vincent Coast Guard and was taken to Kingstown for treatment. "Score another one for ham radio!" Petzolt said. He noted that KG4BVR, W8LK and W3JMU and other stations stood by in case of problems.

Shaw said that when Middleton arrived at the hospital, she was experiencing numbness and partial paralysis. He added that she was doing much better following treatment.

Shaw expressed his gratitude to the amateurs who aided in Middleton's medical evacuation to St Vincent, and especially to Petzolt. "Miranda and I would like to extend a special thanks to Ed for his excellent help throughout the ordeal," Shaw said. "Not only did he assess and take control of the situation in a rapid and professional manner, but he also kept our spirits up as we communicated.

Shaw expressed the hope that he and Middleton could be back on their way to Trinidad "in a week or so." Shaw maintains a Web site <http://www.baggywrinkle.com> and uses HF to access his e-mail while under way.

==>TURKISH AMATEURS FILL POST-QUAKE COMMUNICATION GAP

Amateur Radio operators in Turkey were among the first responders following an earthquake in central Turkey February 3. More than 40 deaths and some 170 injuries were reported in the aftermath of the earthquake, which registered

6.0 on the Richter scale and shook the province of Afyon.

"Our communication system was used by our members within the Civil Defense SAR [search-and-rescue] team for communicating with their HQ in Ankara and within the affected area," said Aziz Sasa, TA1E, president of the Turkish national Amateur Radio organization TRAC. "I must add that we were the only long and medium-range communication resource until normal communication facilities were restored."

Sasa said telecommunications systems in the region brought back up "very rapidly," and that the amateurs were able to wrap up their response the same evening. Hams were at the scene in Afyon for about 10 hours. "HF was utilized only partly, most of the communication was handled on VHF and UHF with repeaters linked to each other," Sasa said. The terrain allowed wide coverage that included the capital city of Ankara--some 200 miles away.

==>ARRL ANNOUNCES "BIG PROJECT" LOGO WINNER, UNVEILS NEW DESIGN

A design by an Illinois amateur--Chris Cieslak, KC9L, of Melrose Park--has been selected as the official logo for the ARRL Education Project, "The Big Project." ARRL Amateur Radio Education Project Coordinator Jerry Hill, KH6HU, said Cieslak's design best depicted the integration of education and technology--the foundation of The Big Project.

"In the center, the shaking hands represent the partnership between Amateur Radio and education," Hill said. "The continents represent the global reach of Amateur Radio, the ones and zeros and circuitry represent technology."

A ham since 1992 and an ARRL member, Cieslak says he does some design work for Web and print but mostly writes for a living. "I've been doing design for about seven years and am self-taught," he said. His amateur interests include homebrewing and kit building, as well as HF mobile and amateur television (ATV). When not hamming, Cieslak has been known to ham it up as an improv comic.

ARRL Central Division Director Dick Isely, W9GIG, presented Cieslak with a certificate January 27 during the Wheaton Community Radio Amateurs Hamfest in Chicago. Cieslak is the WCRA's current vice president.

==>SOLAR UPDATE

Propagation wonk Tad Cook, K7VVV, Seattle, Washington, reports: Average daily sunspot numbers were up this week, rising 38 points over the previous week. Solar flux continued a decline from last week, with average daily flux down more than 18 points. Solar flux for the short term peaked January 29 and has declined since. Predicted solar flux for Friday through Monday is 190, 185, 180 and 175. Flux values should reach a minimum near 170 for the short term, then jump suddenly higher around February 16. Geomagnetic conditions are expected to be moderate.

For the past few days the earth has been in a stream of solar wind from a coronal hole, causing some geomagnetic activity. Planetary K indices were as high as four. Also on March 1 there was another solar wind disturbance

commencing around 0558 UTC, which caused some aurora activity and planetary K indices as high as five. This is generally bad for HF communications because of absorption, especially over polar paths. What HF operators generally want to see are many sunspots, such as we have currently at the peak of this solar cycle, but without flares or the accompanying geomagnetic effects.

Sunspot numbers for January 31 through February 6 were 238, 256, 222, 273, 274, 286 and 226, with a mean of 253.6. The 10.7-cm flux was 242.6, 245.6, 240.6, 232.9, 234.6, 220.6 and 202.5, with a mean of 231.3. Estimated planetary A indices were 5, 11, 18, 5, 6, 16 and 16, with a mean of 11.

==>IN BRIEF:

* This weekend on the radio: The ARRL School Club Roundup is February 11-16. The North American Sprint (CW), the Six Club Second Winter Contest, the CQ/RJ WW RTTY WPX Contest, the Utah QSO Party, the Asia-Pacific Sprint (CW), the Dutch PACC Contest, the YL-OM Contest (CW), the FISTS Winter Sprint, the RSGB 1.8-MHz Contest (CW) and the QRP ARCI Winter Fireside SSB Sprint are the weekend of February 9-10. JUST AHEAD: The ARRL International DX Contest (CW), the YLISSB QSO Party (CW) and the YL-OM Contest (SSB) are the weekend of February 16-17. See the ARRL Contest Branch page, <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar, <http://www.hornucopia.com/contestcal/index.html> for more info.

* School Club Roundup 2002 set: School Club Roundup (SCR), sponsored by the Council for the Advancement of Amateur Radio in the New York City Schools, the ARRL and its Hudson Division Education Task Force, will be held February 11-16. The idea of SCR is to foster contacts with and among school radio clubs, and the annual operating event is a great way for new or inexperienced operators to get on the air in a low-pressure contest environment. Operators are encouraged to take some time to chat beyond the contest exchange. Award certificates will be issued for separate Elementary, Middle/Intermediate/Junior High School, High School and College/University levels for USA and DX entries. SCR rules are available on the ARRL Web site <http://www.arrl.org/contests/announcements/scr.html>. The Wake Forest University Amateur Radio Club is offering the "Deacon Challenge" as an incentive for other collegiate clubs to get on the air. The WFU ARC will operate a demonstration station for six hours on February 12, and it challenges other collegiate clubs to beat their score for the six-hour period. For details, contact Chris Plumblee, KG4CZU, pimcg0@..., or Ken Hoglund KG4FGC, houglund@....

* Amateur Radio Emergency Communications Course registration: February registration for the Level I ARRL Amateur Radio Emergency Communications Course (EC-001) opened February 4 and will remain open through the February 9-10 weekend. Registration for the Level II course (EC-002) will open on Monday, February 11; registration for Level III (EC-003) will open February 18. Courses must be completed in order, starting with Level I. To learn more, visit the ARRL Certification and Continuing Education Web page

<http://www.arrl.org/cce> and the C-CE Links found there. For more information, contact Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@arrl.org.

* Winter Olympics special event: The West Desert Amateur Radio Club will sponsor special event station W7U to commemorate the 2002 Winter Olympics in Salt Lake City, Utah. W7U will be on the air from February 8 until February 24. Look for W7U on or around 3.768, 14.250, 21.300 and 28.400 MHz. QSL to W7EO, PO Box 98, Grantsville, UT 84029.

* Celebrate the sunspots at the 53rd International DX Convention: Mark your calendars for the International DX Convention, April 26-28, 2002 at the Holiday Inn Visalia, California. This event attracts attendees and presenters from around the world, offering an opportunity to catch up on the latest DX events, such as Ducie Island and Logbook of the World, and perhaps catch a glimpse of new products before Dayton! With a full slate of programs plus vendors, a banquet, contest dinners, famous DX, friends and that famous convention patch, there's something for everyone. For more information, visit the International DX Convention Web site <http://www.qsl.net/visalia2002/index.html> or contact Don Bostrom, N6IC, <n6ic@...>.

* ISS crew resumes normal activities following computer shutdown: NASA reports that operations have returned to normal aboard the International Space Station after a computer crash. The crew's routine was interrupted the morning of February 4 when a main computer in the Zvezda Service Module unexpectedly went off-line, disrupting for a few hours the system that controls the spacecraft's orientation. The crew and flight controllers spent several hours correcting the problem. Expedition Four Commander Yury Onufrienko, RK3DUO, and flight engineers Dan Bursch, KD5PNU, and Carl Walz, KC5TIE, have resumed their everyday activities--including working with the space station's science operations. NASA says the crew was never in any danger, but quickly powered down backup equipment and several experiments in case the power generated by the station's solar arrays began to drop. All station systems now are operating normally, and the computer is on line. Russian controllers continue to analyze the problem to determine its cause. Information on the crew's activities aboard the space station, future launch dates and times, as well as station sighting opportunities from anywhere on Earth, is available on the NASA Human Spaceflight Web site <http://spaceflight.nasa.gov>.

* Not too late to become part of ARDF Team USA: ARRL Amateur Radio Direction Finding Coordinator Joe Moell, K0OV, says he has submitted Team USA's Letter of Intent to Participate in the 11th ARDF World Championships, September 2-7 in the Slovak Republic. Twelve stateside ARDFers ranging in age from 11 to 60 have expressed interest in attending, but Moell says it's not too late to add your own name for Team USA consideration. He said the divisions for males under age 40 and for all females still have several openings. Those interested should contact Moell via e-mail, homingin@.... For more information, visit the World Championships Web site <http://www.ardf.sk>. For more information on Team USA, radio-orienteering in the US, and the

upcoming USA Championships near Atlanta, visit Moell's Homing In Web site <http://www.homingin.com>.

* Vote on QST Cover Plaque Award: The winner of the QST Cover Plaque Award for January was Dick Stroud, W9SR, for his article "Six Meters from Your Easy Chair." Congratulations, Dick! The winner of the QST Cover Plaque award--given to the author of the best article in each issue--is determined by a vote of ARRL members. Voting takes place each month on the Cover Plaque Poll Web page, <http://www.arrl.org/members-only/qstvote.html>. As soon as your copy arrives, cast a ballot for your favorite article in the February 2002 issue of QST. Voting ends February 28.

* YHOTY nominations invited: Nominations are open for the Amateur Radio Newsline Young Ham of the Year Award for 2002. Created in 1986, the award recognizes one young radio amateur under the age of 18 in the continental US for his or her contributions to society through Amateur Radio. Nominating forms and additional information are available at the Amateur Radio Newsline Web site, <http://www.arnewsline.org>. All nominations and materials required by the official rules must be received by Amateur Radio Newsline before May 30, 2002.

* New Zealand simplifies amateur licensing: New Zealand has streamlined the route to obtain an Amateur Radio license. New Zealand now offers just two license classes, Limited and General. The Novice and the Novice/Limited licenses no longer are issued, although holders may retain them and continue to operate; some also may be eligible for an almost-instant upgrade. The New Zealand Association of Radio Transmitters (NZART) administers the volunteer examination program there, and examinations are supervised by examiners from NZART branches. Candidate get two hours to complete a 60-question test and must answer 40 questions correctly to pass. The Morse code speed to qualify for the General-grade license has been lowered to 5 WPM. The General License provides access to all Amateur Radio bands with full privileges. A Study Guide and full information on the New Zealand licensing system is available via the NZART Web site <http://www.nzart.org.nz/nzart/>.

* Correction: A table of contents entry in The ARRL Letter, Vol 21, No 05 (Feb 1, 2002), was incorrect. W8YRB, a ham dealing the RFI complaints, lives in Michigan.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; http://www.arrl.org. Jim Haynie, W5JBP, President

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb at http://www.arrl.org for the latest news, updated as it happens. The ARRLWeb Extra at http://www.arrl.org/members-only/extra offers ARRL members access to informative features and columns.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Send e-mail to majordomo@... (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

487. Monthly meeting

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

The monthly meeting for February 2002 will be held on 10th Feb 2002 at 10:00 am at Shishu Vihar School,

The Agenda for the meetings is as follows:-

1. Future activities for this accounting year.
2. Field trip with fox hunt. (When & Where).
3. Discussion and prepartions for the Coming CQ WPX contest.
4. Discussions and feedback of Foxt Hunt & IIT presentation.
5. Fund Raising Drive programme.
6. Pending work of the members.
7. any other topics that time permits.

Please note that in the last monthly meeting there were only 4 members presents, if this is the scene that we might as well not have any meetings, I hope guys will understand and participate tommorrow for sure.

looking forward to having an eyeball with you guys.

ARRL celebrates Presidents' Day
SAVE when you order NOW!

FREE Repeater Directory for online orders of $75 or more*.

The 2002 ARRL Handbook & Handbook CD

"The most respected communications resource for hams, engineers and technicians since 1926."

[ ] ARRL Handbook-- (softcover) $34.95

[ ] ARRL Handbook CD-ROM -- (version 6.0) $39.95

[ ] BONUS when you order BOTH! SAVE $10 -- $64.90

Note: prices do not include shipping and handling.

The 2000 edition ARRL Handbook includes over 1,200 pages of the most current, practical information on applied electronics and communications. Always revised! New projects include a RF voltmeter, easy-to-build VHF receiver, and a universal power supply. Find current discussions of state of the art technologies such as DSP, and a new chapter on wireless services that covers cell phones, pagers, and more. Updated contact information for parts suppliers and manufacturers. The ARRL Handbook CD for Radio Amateurs, Version 6.0 (for Windows and Macintosh**) includes all of the text and illustrations from the printed ARRL Handbook on a fully searchable CD-ROM. Access Every Word and Every Page! Uses the industry standard Adobe Acrobat Reader (included!). [**Macintosh users: some supplementary software utilities included, for Windows and DOS only.]

* FREE ARRL Repeater Directory when you place an order for $75 or more (excluding shipping/handling) on the ARRLWeb's secure online catalog. THIS SPECIAL OFFER EXPIRES MONDAY, February 18 at 2400 UTC. Limit 1 free Repeater Directory per customer. The free gift will not appear on your submitted order, but will be included with every order totaling at least $75.
[Click to begin shopping]

ORDERING

Prices do not include shipping & handling charges, and are subject to change without notice. To order from ARRL, please use the links in this message to visit ARRL's secure

online catalog. Or, call our Publication Team toll-free in the US 1-888-277-5289, Monday through Friday from 8 AM to 8 PM Eastern time [Outside US telephone (860) 594-0355]. ARRL publications are also available from your local ARRL dealer.

==>ARRL ASKS FCC TO DROP RFID RULES PROPOSED FOR 425-435 MHz

The ARRL says the FCC "cannot legally proceed with the rules proposed for
unlicensed RFID tags at 433 MHz," and it's asked the Commission to not adopt
them. The League filed comments February 12 as part of its continued
opposition to what it called "this ill-conceived proposal" of SAVI
Technology to deploy unlicensed transient RF identification devices between
425 and 435 MHz at much higher field strengths and duty cycles than Part 15
rules now permit for such devices. The FCC appears inclined to agree with
SAVI's proposal, but FCC staff members have told the ARRL that it's not a
"done deal."

"The level of interference from the devices permitted under the proposed
rule is intolerable," the ARRL argued, citing its own interference study.
The League reiterated its stance that the Communications Act of 1934 "is
```

devoid of any authority to allow unlicensed devices with substantial interference potential; such devices must be licensed."

SAVI, the ARRL argues in its comments, "wants to have its cake and eat it too" by getting high power levels and lengthy duty cycles operating on a band heavily used by a licensed radio service that uses sensitive receivers "and all of the above on an unlicensed basis." Among other applications, RFID tags are used to track and inventory parcel shipments and vehicles.

The ARRL said the FCC's inclination to go along with SAVI Technology's proposal "eviscerates the periodic radiator rules, is vague and overbroad," and would permit digital RFIDs to operate "at unsuitable power levels and duty cycles." The result would be unacceptable interference that would "preclude or repeatedly disrupt amateur operation," the ARRL said.

The ARRL also said that the cost of the tags is a problem for SAVI, and the choice of frequency band is related only to the cost of components. The League said SAVI chose 433.9 MHz as an operating frequency because of the availability of relatively cheap components in Europe, where the 433.05-434.79 MHz band is available for industrial, scientific and medical uses in at least 10 countries.

The ARRL pointed out that deploying the proposed RFID tags elsewhere would make much better sense than 70 cm. "SAVI should seriously consider the frequencies around 868 or 915 MHz, which apparently stand at least some reasonable chance of global standardization," the ARRL advised.

The RFID rules proposed in response to SAVI's Petition for Rule Making last year "are flawed from their inception and should not be adopted under any circumstances," the League concluded. The ARRL has said it will "do whatever it takes" to keep the FCC from permitting the RFID tags on 70 cm. That could include further direct appeals to FCC staffers, Imlay has said.

The FCC included the Part 15 RFID proposals within a larger proceeding, ET-01-278, that's aimed primarily at reviewing and updating portions of its Part 2, 15 and 18 rules. A copy of the ARRL's comments in the proceeding is available on the ARRL Web site <http://www.arrl.org/announce/regulatory/savi/arrl-savicmts-0.html>. Reply comments are due by March 12, 2002.

==>DIM LIGHT AT END OF TUNNEL IN VANITY HOLDUP

Despite a rising level of annoyance among those awaiting Amateur Radio vanity call signs, the FCC remains at a standstill in terms of resolving the current stalemate. No vanity call signs have been granted since February 1, when applications received at the FCC October 22, 23 and 24 were processed. The FCC subsequently realized that it needed further information for an October 23 application, and--at least for now--it has rescinded vanity grants for October 23 and 24.

Prior to late January, no vanity call signs had been issued since October 30. The ARRL estimates that some 1800 vanity applications now are in the

FCC's processing pipeline--the majority of them filed electronically.

The current holdup stems from the fact that some mail destined for the FCC's Gettysburg, Pennsylvania, office last October was diverted to Washington, DC, with other FCC mail for anthrax decontamination. That mail, which included more than 100 vanity applications filed on paper, never got back to Gettysburg, where the FCC processes all vanity applications. Since the FCC's policy is to give equal priority to electronic and paper vanity applications, the whole process ground to a halt when the paper applications went missing.

Payment receipts were not lost, however, and using that information, FCC Wireless Telecommunications Bureau personnel in Gettysburg scrambled to contact known applicants via e-mail or telephone to have them resubmit copies of their vanity applications. That process was largely successful. Right now, it appears that only three vanity applications filed during the last couple of weeks of October remain outstanding. The FCC has been unable to reach the applicants via e-mail or telephone, however. Wireless Bureau staffers also have been dealing with similar issues involving date-sensitive applications in other radio services.

The FCC has been considering issuing a formal public notice with a cutoff date for outstanding applicants in the Amateur Vanity and in the other similarly affected FCC services to respond--a process that could take weeks. In the meantime, the ARRL has been assisting the FCC in efforts to contact the missing applicants, collect the necessary information and get it to the Commission as soon as possible. If that effort is successful, the vanity logjam could begin to break as early as next week.

Once vanity processing resumes, the FCC is not expected to process all of the remaining applications in a single batch. It's more likely that the processing would be spread out over a period of a few days.

Last week, the FCC said it was making arrangements to test for possible anthrax contamination at the off-site mailroom serving the Gettysburg office. The Gettysburg testing would be "a further precaution," the FCC said, and there was no indication that any anthrax was present at Gettysburg or that the testing would have any impact on the processing of any Amateur Service applications. Since October, the FCC has been urging all applicants to file electronically.

==>AMATEUR RADIO VOLUNTEERS SUPPORTING OLYMPICS

Following months of planning and coordination, Amateur Radio is supporting the 2002 Winter Olympic Games, which got under way in Salt Lake City, Utah, February 8. Ham radio volunteers are assisting with security and remain available to provide back-up communication.

"The amateurs involved have assisted numerous local and federal agencies to develop a unique system that covers the entire Wasatch Front Area, providing communications to reach numerous Olympic venues 24 hours a day," said Utah ARRL Section Manager Mel Parkes, AC7CP. "Amateur Radio will be there should

any of the primary frequencies fail or become unavailable."

According to Parkes, Utah Section Emergency Coordinator John Mabey,W7CWK, and Brent Thomas, AC7H, from the State of Utah Comprehensive Management Office began working on this effort over a year ago. A special public safety organization--Utah Olympic Public Safety Command (UOPSC)--was created by the various local and national public safety organizations that provide the security necessary for the international event. Mabey, along with Davis County EC Hall Blankenship, KC7RAF; Kirk Boman, KD0J; Ed Cole, KB7EC; and Mike Youngs, KK7VZ, headed up the Amateur Radio effort to provide emergency backup communication for the Olympic Security Command.

"UOPSC has now involved more than 200 Amateur Radio volunteers in Utah to support this critical security effort," Parkes said. In addition Amateur Radio volunteers are staffing a number of Olympic Security Command centers assisting local and national public safety organizations.

Nevada SEC Paul Cavnar, NN7B, says hams in his state remain on standby in case they're needed to help with communications. Cavnar said hams in Nevada, Idaho and Northern California also are prepared to assist in the unlikely event of a mass evacuation of the Winter Olympics site.

"The hard work and dedication by all these Amateur Radio operators will certainly contribute to a very successful and safe Winter Olympic Games," Parkes said.

==>CONFERENCE TOLD OF HAM RADIO'S VALUE TO HURRICANE FORECASTERS

Attendees at the seventh annual Amateur Radio Hurricane Conference earlier this month in Miami gained some insights into how forecasters make use of reports gathered via ham radio to produce hurricane and tropical storm advisories. National Hurricane Center staffer Stacy Stewart described how so-called "ground truth" reports from hams in an affected region can augment data gathered via instruments, radar and satellites and permit forecasters to generate more accurate models of storms in progress.

Nearly a full house of some 40 attendees turned out for the conference February 2 at the National Hurricane Center. The annual event was organized by volunteers and operators of W4EHW--the Hurricane Center's Amateur Radio station, now in its 22nd year. During an Atlantic or Gulf storm, real-time weather data from amateurs is funneled to forecasters via the Hurricane Watch Net <http://www.hwn.org> and W4EHW to benefit forecasters in tracking the storm and predicting its likely path.

Stewart told the gathering that, among other things, ground truth reports can give forecasters a more meaningful picture of wind velocities at different elevations. The eyewitness ham radio reports also can help forecasters to pin down a storm's location and give them a clearer idea of what actions the public is taking or might have to take, he said.

In addition to W4EHW operators and team members, those attending included representatives of the ARRL, the Hurricane Watch Net, Florida Emergency

Management, and radio amateurs from the US Virgin Islands, Jamaica, Turks and Caicos, and Bermuda. Hurricane Center Amateur Radio Coordinator John McHugh, KU4GY, opened the conference and gave an update on the Caribbean Amateur Radio Meteorological Emergency Network (CARMEN) project <http://www.fiu.edu/orgs/w4ehw/>.

Assistant Amateur Radio Coordinator Julio Ripoll, WD4JR, recounted the 2001 hurricane season and W4EHW's supporting operations. He presented some of the reports and photographs sent in from affected areas, including Belize during Hurricane Iris, and Cuba and the Bahamas during Hurricane Michelle.

Assistant Hurricane Watch Net Manager Mike Pilgrim, K5MP, described the Net's ongoing mission and activities.

ARRL's Steve Ewald, WV1X, discussed the support that the League provides for emergency preparedness and training and gave a plug to the popular ARRL Amateur Radio Emergency Communications Course series <http://www.arrl.org/cce/syllabus.html>. He said the ARECC courses offer a standardized approach to emergency communications training. Ewald said the ARRL's Field Organization continues to play a vital role in disasters and emergencies, and he thanked all participants for "carrying on the mission of Amateur Radio public service."

Individuals honored with W4EHW/National Hurricane Center awards of appreciation in recognition of support rendered during the 2001 hurricane season were: FCC Special Counsel Riley Hollingsworth, K4ZDH; Wayne Wilkinson, KC4CYK/C6A; Mike Matalon, 6Y5MM; Alison Barton, KF6HYJ/mm; Brian Hamilton; Alexis Digon, CL4RP; and Lionel Remigio, KC4CLD.

The conference closed with a tour of the operations room at the National Hurricane Center and W4EHW. "We hope for peace on Earth and a quiet 2002 hurricane season," McHugh said. For more information, visit the W4EHW Web site <http://www.fiu.edu/orgs/w4ehw/>.

==>MORE 5-GHZ SPECTRUM SOUGHT FOR WIRELESS NETWORKING DEVICES

The Wireless Ethernet Compatibility Alliance--WECA, an industry coalition--has petitioned the FCC for additional 5-GHz spectrum to make more room for radio local area network (RLAN) systems and other unlicensed Part 15 devices. The FCC put the WECA petition on public notice in late January, not long after it was filed. WECA seeks to extend the available spectrum to include 5.470 to 5.725 GHz. The Amateur Service now shares 5.650 to 5.925 GHz on a secondary basis with government and nongovernment radars and nongovernment fixed satellite uplinks. The ARRL plans to comment on the WECA proposal.

"Layering relatively high-power Part 15 users on 5.650-5.725 GHz would reduce the utility of the amateur allocation," said ARRL Executive Vice President David Sumner, K1ZZ. He said the amateur 5-GHz allocation already has suffered from earlier FCC actions. In 1997, the FCC allocated 5.150 to 5.350 GHz and 5.725 to 5.825 GHz for so-called Unlicensed National Information Infrastructure (U-NII) wireless local area network devices. In

1998, the Commission allocated 5.850 to 5.925 GHz for dedicated short-range communications (DSRC) systems in the Intelligent Transportation System.

WECA says the additional spectrum and proposed rule changes are needed to "accommodate the inevitable explosion of demand for broadband mobile wireless data systems." In its petition, designated as RM-10371, WECA asserted that extending the spectrum available for unlicensed Part 15 devices at 5 GHz can be accomplished easily and "without harmful interference to other primary users." The coalition proposed extending the technical rules now in place for U-NII devices at 5.25 to 5.35 GHz to cover the new frequencies.

Interested parties may comment on the petition using the FCC's Electronic Comment Filing System (ECFS) <http://www.fcc.gov/e-file/ecfs.html>. Click on "Search for Filed Comments" and enter "RM-10371" in the "Proceeding" field. Comments are due by the end of February.

==>ARRL FIELD & EDUCATIONAL SERVICES ANNOUNCES CHANGES

ARRL Field & Educational Services Manager Rosalie White, K1STO, has announced the creation of two teams to help streamline the department's varied support activities. White has named Steve Ewald, WV1X, to lead the new Field Organization/Public Service Team, and Mary Lau, N1VH, to lead the new Field & Educational Support Team. White said the new teams, announced February 8, will permit F&ES staff members with common goals to more easily share their expertise, ideas, and resources and better serve League members.

Ewald's Field Organization/Public Service Team will support the activities of field volunteers, who further ARRL objectives at the local and section level. Ewald thus becomes the primary contact person at ARRL Headquarters for Section Managers. He will continue as the League's expert on emergency communications, public service and the field organization. "Public service is one of the most important aspects of Amateur Radio and one of the main reasons why we enjoy the many frequencies we've been allocated," White said. Ewald's team includes Leona Adams and Linda Mullally, KB1HSV.

Lau's Field & Educational Support Team will work with field volunteers active in the education and recruiting of new hams, as well as provide support for ARRL-affiliated clubs and ARRL-sanctioned conventions and hamfests. F&ES also sponsors annual events, such as Jamboree On The Air, Kid's Day and School Club Roundup, and the ARRL's annual educator and technical awards. Lau's team includes Jean Wolfgang, WB3IOS, Gail Iannone, and Margie Bourgoin, KB1DCO.

White stressed that Amateur Radio education in arenas other than schools will continue to be a major focus, equal in importance to the support given to clubs, hamfests and conventions.

A Tennessee native, Ewald, 42, began his ARRL career in 1982. He currently edits the "Section News" and "Public Service" columns in QST, and is a frequent contributor to various ARRL publications. He was licensed in 1972.

Lau has been at ARRL Headquarters since 1986. She also serves as secretary of the ARRL Foundation. She's been a ham since 1985.

==>SOLAR UPDATE

Heliophile Tad Cook, K7VVV, Seattle, Washington, reports: Average daily solar flux and sunspot numbers both declined over the past week. Solar flux reached a low around 192 around February 7 and 8 but jumped to near 217 over the weekend.

The best current guess is for flux values to remain between 190 and 195 from now through Tuesday, then peak near 240 or 245 around February 24-28.

On February 14 around 0250 UTC a coronal mass ejection headed toward Earth, and this should cause geomagnetic upset around February 16- 17, just in time for the ARRL International DX Contest (CW). This isn't good news for contesters, although it is possible that the effects could be mild. If not, then expect greater absorption--especially on the polar paths. There is also the possibility of a visible aurora, especially in northern latitudes.

Sunspot numbers for February 7 through 13 were 178, 229, 225, 205, 206, 182 and 158, with a mean of 197.6. The 10.7-cm flux was 191.7, 191.5, 199.4, 216.5, 201.7, 208.3 and 203.5, with a mean of 201.8. Estimated planetary A indices were 14, 10, 9, 8, 13, 6 and 10 with a mean of 10.

==>IN BRIEF:

* This weekend on the radio: The ARRL International DX Contest (CW), the YLISSB QSO Party (CW) and the YL-OM Contest (SSB) are the weekend of February 16-17. JUST AHEAD: The CQ 160-Meter Contest (SSB), the REF Contest (SSB), the UBA DX Contest (CW), the High Speed Club CW Contest, the North Carolina QSO Party, and the CQC Winter QSO Party are the weekend of February 23-24. See the ARRL Contest Branch page, <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar, <http://www.hornucopia.com/contestcal/index.html> for more info

* Field Day 2002 rules, packets now available: The ARRL Field Day 2002 rules and packets now are available on the ARRL Web site <http://www.arrl.org/contests/forms/> as Adobe PDF files (ASCII files will be updated by next week). The ARRL has adopted rule changes affecting Field Day, including the addition of a "Get On The Air" (GOTA) station, which replaces the Novice-Technician station. Field Day 2002 will mark the first in which stations throughout the Americas have been invited to participate. All International Amateur Radio Union Region 2 countries--North and South America--may take part in Field Day, which takes place June 22-23 this year. For more information, contact ARRL Contest Branch Manager Dan Henderson, N1ND, contest@....

* ARRL Headquarters closed for Presidents' Day holiday: ARRL Headquarters will be closed all day Monday, February 18, for Presidents' Day. Headquarters will reopen Tuesday, February 19, at 8 AM Eastern Time.

* Amateur Radio Emergency Communications course registration: Registration for the Level III Amateur Radio Emergency Communications course (EC-003) will open Monday, February 18, at 4 PM Eastern Time. Registration for the Level II ARRL Amateur Radio Emergency Communications course (EC-002) will remain open through this weekend or until all 50 seats are filled--whichever happens first. March registration for Level I will open Monday, March 4. Courses must be completed in order, starting with Level I. Thanks to tremendous interest in the Antenna Modeling course (EC-004), all available seats for the first classes have been filled. More than 100 people signed up the first day! As we add mentors to the list for this course, we will be able to offer more classes in the months ahead. To learn more, visit the ARRL Certification and Continuing Education Web page <http://www.arrl.org/cce> and the C-CE Links found there. For more information, contact Certification and Continuing Education Coordinator Dan Miller, K3UFG, cce@....

* Body of amateur lost in World Trade Center collapse located: The body of Robert D. "Bob" Cirri Sr, KA2OTD, was among several found February 9 in the ruins of the World Trade Center. The remains of Cirri, 39--a Port Authority Police Department lieutenant--and five other PAPD members were located in what had been the lobby of One World Trade Center--the second tower to collapse September 11. Nearby, recovery crews also found the body of a woman strapped into a rescue chair. An ARRL member, Cirri, of Nutley New Jersey, had served as ARES District Emergency Coordinator for Hudson County. "The thoughts of the Cirri Memorial Radio Club are with his family," said club president Rich Krajewski, WB2CRD. The club, headquartered in Jersey City, was renamed last year to honor Cirri's sacrifice. Cirri had helped to organize the club.

* Wayne C. Williams, K4MOB, SK: Wayne Williams, K4MOB, of Colfax, North Carolina, died February 12 after an extended illness. He was 65. An ARRL member, Williams served from 1977 to 2000 as editor of the Southeastern Repeater Association's SERA Repeater Journal. As the proprietor of Williams Radio, Williams was a familiar and welcome presence on the hamfest and convention circuit in the southeastern US. Current Repeater Journal Editor Gary Pearce, KN4AQ, hailed Williams as a "driving force in SERA," the frequency-coordination body for eight southeastern states. During his tenure as editor, Williams transformed the Repeater Journal from a newsletter to its current color-cover magazine format. "Wayne touched the lives of thousands of hams in the Southeast," Pearce said. "We'll miss him." Williams' survivors include his wife, Gerry, KB4SEL, and two sons, Chris, W4CAW, and Wayne Jr (a third son, Gary, died in 2000). The funeral was February 14.

* Many happy returns to W8HKY, age 101! ARRL member Mike Anuta, W8HKY, of Marinette, Wisconsin, remains active on VHF and UHF at the age of 101 and regularly participates in club nets. Anuta, who's quite possibly the League's oldest member, celebrated his 101st birthday February 4. The ARRL sent special greetings to Anuta when he attained centenarian status in 2001. He was first licensed as WN8HKY in 1952 during the early days of the Novice program. ARRL Wisconsin Section Manager Don Michalski, W9IXG, said he visited W8HKY at the Marinette-Menominee Amateur Radio Club

<http://www.W8PIF.com> annual charter banquet. "He wanted to pass along his gratitude to the club for their efforts in bringing area youngsters into the hobby," Michalski said. "He's an inspiration to everyone!"

* New satellites get OSCAR numbers: AMSAT-NA's Bill Tynan, W3XO, has announced OSCAR designations for two new amateur satellites. PCsat will be known as NAV-OSCAR-44 (NO-44). PCsat is a 1200-baud APRS digipeater designed for use by amateurs using hand-held transceivers or mobiles. The spacecraft known as Sapphire has been designated NAV-OSCAR-45 (NO-45). Sapphire has 1200-baud AX.25 telemetry and a voice replay on 437.1 MHz. PCsat is a project of the Small Satellite Program within the US Naval Academy's Department of Aerospace Engineering, and Sapphire is a joint effort involving the Naval Academy's Small Satellite Program, Stanford University and Washington University at St. Louis. Both were launched October 1, 2001, from Alaska.

* New listserver established for Web resource discussions: ARRL Field and Educational Services will offer to a select group of field volunteers a listserver for discussions about how ARRL's Field Organization can be better served by ARRL Web resources. As this is a pilot project to discover core Web issues of importance to field volunteers, all ideas are welcome but may not necessarily result in creative application or implementation. If you are interested in participating, e-mail Mary Lau, N1VH, <mlau@...> a short statement noting any topics that especially interest you and describe your Web development experience, if any.

* QCWA honors K4FW: The Quarter Century Wireless Association has honored Al Kahn, K4FW, of Cassopolis, Michigan, on his 80th anniversary as an Amateur Radio licensee. Kahn, who turns 96 in July, was president of Electro-Voice and, after retirement, went on to co-found Ten-Tec. He's also a member of the ARRL, the First-Class CW Operators Club and the A-1 Operator Club. The Quarter Century Wireless Association was organized to promote friendship and cooperation among Amateur Radio operators licensed at least 25 years ago. QCWA boasts nearly 200 active chapters and more than 10,000 active members from Australia to Zimbabwe.--submitted by Dan Caesar, NI9Y

* Second Winter Olympics special event station on the air: Ray Friess, WA7ITZ, in Salt Lake City has been operating special event station WA7ITZ/W19OG to commemorate the 19th Winter Olympic Games. WA7ITZ/W19OG is operating on 160 through 10 meters near the lower edge of the General phone bands. Some CW operation is possible. QSL to WA7ITZ, 1801 Jennifer Way, Salt Lake City, UT 84116. An SASE would be appreciated.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from
ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site,
http://www.arrl.org/members/. You'll have an opportunity during registration
to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other
material. To change these selections--including delivery of The ARRL
Letter--registered members should click on the "Member Data Page" link (in
the Members Only box). Click on "Modify membership data," check or uncheck
the appropriate boxes, and click on "Submit modification" to make selections
effective. (NOTE: HQ staff members cannot change your e-mail delivery
address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. (NOTE: The ARRL Letter will be
posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio
Club: Send e-mail to majordomo@... (no subject needed). The body of the
message should say "subscribe letter-list" to subscribe or "unsubscribe
letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who
receive The ARRL Letter via this listserver.)

496. Telephone No. Change

Yahoo group: m_a_r_s

From: m_a_r_s@yahoogroups.com
Topic: 740 Message: 740

Enter your vote today! A new poll has been created for the
m_a_r_s group:

The most exciting part of Ham Radio you
think is(Apart from Disaster
communication):

o JOTA
o Ganesh Visarjan
o Rallies

To vote, please visit the following web page:

http://groups.yahoo.com/group/m_a_r_s/surveys?id=946878

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

Hi there,
I finally did what I wanted to do for a long time. I went up 21000 feet in an aircraft and dived!!!!! I soared like a bird till 5000 feet and then parachuted the rest of the way!!!
Besides ham radio this is what i want to do!!!! Become a proffessional sky diver!!!!!
I have it all on video!!!!
It did strike me then, that all of mars should sky dive at the same time and talk to each other on radio!!!!!That would be fun, na? Wonder what would be the answer to whats your QTH? 21000 ft and falling!!!!!!Ha ha .
Cheers all,
Sarla

In an recent article "Aircraft Interference Sparks FCC Crackdown" (May 2002) explains the usage of MARS/CAP frequencies just above & below Amateur Radio (VHF & UHF) bands for long range cordless (mobile) telephone equipment:

http://www.conformity.com/cnf0205.html#aircraft

It's apparent the FCC is aware of, at least, one merchant in Miami Florida selling these devises as an alternative for cell phones.

The complete FCC's order for this particular case can be read here:

http://www.conformity-update.com/fcc-fines-020301.pdf

I did some quick research on the web and stumbled across the following site which sells the same type of "long range" wireless telephones:

http://www.no-air-time.com (http://www.no-air-time.com/)

http://www.no-air-time.com/Merchant2/merchant.mv

Most amateur VHF/UHF Amateur radio transceivers, including HT's have the ability to receive/monitor the frequencies of which these cordless telephones operate.

Perhaps fellow HAM's can keep an eye on these frequencies and forward any incriminating evidence (recordings, date / time, RF-fingerprints, directional finding coordinates) to your local FCC office and put these "pirates" out of business.

Your comments appreciated.

these phones are intended for use in south and central america. they are popular with farm owners and so forth because cell service is very expensive in these countries. most local merchants wont sell them without you presenting proof that it being shipped out (bill of laden). they do turn up at hamfests from time to time and the amps also surface. i have a pair of the amps (base and mobile) that i bought at a local fest to tune for 6m. they come tuned to the 47mhz band and have so-239 conectors on them. i dont understand how these units would interfere with aircraft freqs if they were put to use here in the u.s. as it would take a third harmonic to get into the air band if someone where to use (illegally of course) put them to use. finding an antenna tuned for those freqs is near impossible (you'd have to roll your own) and theres soo many 47mhz cheapo phones out there that its range would still be cut short. i havent seen any in the 150mhz range yet. theres plenty of noisy paging transmitters in that band though.. maybe they crack down on those!

i dont see its benefits in an urban area. maybe in a rural area it may be worthwhile but then again a 2.4ghz cordless has amazing range when sitting in a 2 or third story window. i just cant see this as being such a common problem.

This is a real problem. There have already been a number of documented cases of these long range cordless phones interfering with air traffic control safety-of-flight communications, and also to amateur communications.

Also, several vendors have been shown to sell to anyone who walks in their door, or calls them, and is willing to pay the price, without any verification as to where the item is going to be used.

The aeronautical frequencies are protected throughout most of the world by international treaties, yet these items are being produced, exported/imported and marketed by unscrupulous outfits.

For more info, see http://www.aerorfi.org (http://www.aerorfi.org/)

Not to get too technical here, but it's called a

BILL OF LADING

The individual that the US wants, dead or alive is:

OSAMA BIN LADEN

It is NOT a

BILL OF LADEN.

Just a clarification...

(http://www.qrz.com/cgi-bin/ikonboard.cgi?s=3d3d9fac21c1ffff;act=Profile;CODE=03;MID=107-0000068099) (http://www.qrz.com/cgi-bin/ikonboard.cgi?s=3d3d9fac21c1ffff;act=Msg;CODE=04;MID=107-0000068099) (http://www.qrz.com/cgi-bin/ikonboard.cgi?s=3d3d9fac21c1ffff;act=Mail;CODE=00;MID=107-0000068099) (http://www.kb9dbc.com/)

According to most of the complaints I see on aviation-related web sites, the interference is seen largely in the 133.875 - 134.650 MHz range. One of these boxes, operating at 47MHz, would have its third harmonic at 141 MHz. Doesn't make sense, unless the phones are really operating at 44.625 - 44.883 MHz or their signals are somehow getting mixed with some sort of 3.375 MHz signal. (3.58 I could believe, but it doesn't work out.)

This is all academic, of course, the things are illegal and we need to see they're eliminated from the picture, but one wonders if the aviation interference isn't something else we're not seeing.

These Phones are being used in Brazil and Argentina. What is legal in some countries is not legal in others and there is nothing you can do about it. That being said, I'm off to Holland for some hookers and rollies. Hey, it's legal there!

There are, of course, other possibilities for getting a 47 MHz signal to appear in the aircraft band. A heterodyne with a radio station at the bottom of the FM broadcast band or with TV channels 5 (sum) or 8 (difference) would bring it into the right frequency range.

755. Night Owls Net Freq

Yahoo group: m_a_r_s
Date: 2002-07-26 12:06:16 UTC
From: Sandip Adiwarekar
Topic: 755 Message: 755

Hello everybody!!

From last 2/3 days there were discussions going on about LL QRM of 2M on
Night Owls Net. Wispi, Prashant, Vijay, Mukesh, Ananta and myself
are thinking of changing the Net frequency from 145.100 to 145.000

Please reply on the egroup or on Night Owls Net :
- whether the frequency 145.000 is OK with you or not
- if you are facing LL QRM or PAGER disturbances on 145.000 at yr QTH.
- the alternate frequency which you find is QRM free!

If everybody agrees to 145.00, i think we should switch to final frequency
from 1st August, 2002. This gives sufficent (7 days) time to decide whether
we should change the Net frequency or not.

Sarla!! Fantastic work!!! i would like to see the skydiving video
as well as the bugee jumping video from yr last DX visit,
when u return to VU, take care!!

Sumeet!! keep posting yr LW SWLing reports!!!

73s,
sandip

From: madhu rajan
Topic: 755 Message: 760

i've encountered phone qrm on 145.100 . would be nice to take the net to
145.000
cheers!

Hiya gang,
Was on 20 and 15 trs for a full 4 hrs,but didnt hear any of you.But I talked to vu2xx and vu2elj,so i guess propagation was there,but you guys were'nt!! I was under a huge huge pileup all the time and was exhausted!!I was putting out a tonne of power and was heard all over the world. !!I had a fantastic time!!
I am back around the 12th in India.

Sarla

765. Calling Freq. - 145.000

Yahoo group: m_a_r_s
Date: 2002-08-01 06:18:50 UTC
From: Sandip Adiwarekar
Topic: 765 Message: 765

Hi everybody!!!

Kindly note that from today onwards the net/calling frequency of MUMBAI is changed, because of the heavy Chinese Longrange Cordless Phone QRM, from 145.100 to

145.000 Mhz

so switch on your 2m set and tune to 145.00 for QRM less check-in into the NET at 9.30pm.

and you see that frequency written above in tricolor, that is to remind you about our 15th Aug event on 2M i.e. Special Independence Day Night Owls Net.

The details of that event will be announced on the egroup very soon.

73s,
Sandip - VU2UGO

Clear DayMUMBAI AMATEUR RADIO SOCIETY

Dear Members,

Some Musical Event is taking place at Goregaon Sport Complex, it is going to be a huge crowd, hence HAMs are required for communication support.

The event is on 3rd AUGUST 2002, from 4pm to 10 pm, members interested in offering their services may directly contact Jignesh - VU2JHD on 98212-67955.

768. Re: [m_a_r_s] Night Owls Net Freq

Yahoo group: m_a_r_s
Date: 2002-08-03 13:12:30 UTC
From: Jaiprakash Pullakudy
Topic: 755 Message: 768

Friends

So all are running away?

is there any method to drive them off?

One possible way I did:
track their LL no. and make a continuous call to them
at late hours and harras them MAKE QRM TO THEIR LL etc
etc.

If all of us can continue for days then our fq.will be
free.

Don't let them trace us.

we can pass on the LL of all Long range cordless phone
users nos. to all members thru. this group.

Good luck

Subject: Re: [m_a_r_s] Night Owls Net Freq

Friends

So all are running away?

is there any method to drive them off?

One possible way I did:
track their LL no. and make a continuous call to them
at late hours and harras them MAKE QRM TO THEIR LL etc
etc.

If all of us can continue for days then our fq.will be
free.

Don't let them trace us.

we can pass on the LL of all Long range cordless phone
users nos. to all members thru. this group.

Good luck

Draft NFAP-2000

India Footnotes

(http://www.nic.in/nfap-2000/p00.htm)

National Frequency Table (http://www.nic.in/nfap-2000/p13.htm)

International Frequency Table (http://www.nic.in/nfap-2000/p05.htm)

IND.001

The frequency spots 1610 kHz, 1640 kHz, 1675 kHz & 1690 kHz are earmarked for Cordless Telephone for base units only.

IND.002

Amateur Service is permitted in the following bands

1820-1860 KHz

3500-3700 KHz

3890-3900 KHz

7000-7100 KHz

14000-14350 KHz

18068-18168 KHz

21000-21450 KHz

4890-24990 KHz

28000-29700 KHz

144-146 MHz

434-438 MHz

1260-1300 MHz

3300-3400 MHz

5725-5840 MHz

IND.003

The frequency spots 2010.4 (A)/2009.0 (C) kHz ,2025.0 (A)/2026.4 (C) kHz are earmarked to Fishing vessels.

IND.004

The frequency spots 3211.4 (C)/3213.0 (A) kHz, 5219.4 (C)/5218.0 (A) kHz, 13861.0(C)/ 13862.4 (A) kHz, 73.675 MHz, 79.025 MHz,159.55 MHz, 436.525 MHz & 461.525 MHz are earmarked for demonstration of equipment.

IND.005

The frequency spots 3698.0(A)/3699.4? 5883.0(A)/5881.6 (C) kHz, are earmarked for shipping industries.

IND.006

The frequency spots 26.375 MHz, 26.475 MHz, and 26.575 MHz are earmarked for Cordless telephone base and remote units.

IND.007

Earmarking of Frequencies For Different Purposes In Citizen Band

Frequency (KHz)

Type of Purpose

26964.0, 26972.0, 27036.0, 27124.0

Personal Communication Relating To Hobbies

27260.0

Radio Controlled Toys

27004.0, 27116.0, 27148.0, 27156.0, 27228.0

Aeromodelling

27140.0, 27204.0

Mountaineering

27220.0, 27244.0

Radio Communication Relating To Sports Events

27012.0, 27028.0, 27172.0, 27212.0

Communication Requirement In Rural Areas

27044.0

27052.0

Communication Relating To Road Accident/Emergencies:
- Contacting Police
- Contacting Hospitals/Ambulance

26980.0, 27236.0

Communication Needs On Highways

27092.0, 27100.0

Communication Requirements Of Wild Life/Forest Conservation

27060.0, 27068.0

Life Saving Communication In Coastal Water/Rivers/Lakes

27076.0, 27084.0

Natural Disaster Relief

27020.0, 27108.0

For Special Radio Controlled Devices
(Garage Door Openers, Safety Alarm Etc.)

27988.0, 26996.0, 27132.0 27164.0, 27180.0, 27188.0, 27196.0, 27252.0, 27268.0,27276.0

Spare Channels For Future Requirements

IND.008

The frequency spots 26.968 MHz & 26.976 MHz , 150.175 MHz & 150.9 MHz are earmarked for Mountaineering expedition.

IND.009

The frequency spots 27.155 MHz & 27.225 MHz are earmarked for radio control of models.

IND.010

The frequency spots 27.250 MHz & 27.260 MHz & 5725-5735 MHz are earmarked for Radio controlled low power electric gadgets/toys.

IND.011

The frequency spots 36.5MHz,36.7 MHz, 37.1 MHz, 37.9 MHz, 160.9 MHz & 161.8 MHz are earmarked for Radio microphones.

IND.012

The frequency spots 46.675 MHz,46.725 MHz, 46.775MHz, and 46.825 MHz are earmarked for Cordless Telephone Base/Remote units.

IND.013

The frequency spot 49.830 MHz, 49.845 MHz, 49.860 MHz and 49.875 MHz are earmarked for cordless telephone base/remote unit.

IND.014

The requirement of Fixed/Mobile services in the band 54-68 MHz will be considered on case by case basis.

IND.015

The requirement of broadcast services will be considered in the frequency band 87-91.5 MHz and 95-100 MHz on case by case basis.

IND.016

The requirement of Fixed/Mobile services will be considered in the frequency band 91.5-95 MHz.on case by case basis.

IND.017

The requirement of Fixed/Mobile services may be considered in the frequency band 100-108 MHz on case by case basis.

IND.018

The frequency spots 143.950 MHz, 150.175 MHz & 150.9 MHz are earmarked for Car rallies/Sports activities.

IND.019

The requirement of wide area radio paging systems will be considered in the frequency band 146.45-147.95 MHz, 151.5-153 MHz, 164.5-166.5 MHz and 171-173 MHz. The frequency spots 146.5625MHz, 146.6125MHz, 146.6375 MHz, 151.6125 MHz (except Pune), 151.6625 MHz, 165.3625 MHz (Delhi only), 165.4625 MHz, 165.6625 MHz, 166.1125 MHz, 166.1625 MHz (except Delhi), 166.2375 MHz & 166.2875 MHz (Bombay only) ,166.3125 MHz, 166.3625 MHz, 166.3875 MHz, 166.4375 MHz, 172.8635 MHz, 172.8875 MHz and 172.9375 MHz are earmarked for wide area radio paging only.

IND.020

The frequency spots 148.5 MHz and 148.575 MHz are earmarked for concstruction activities.

IND.021

The requirement of onsite radio paging systems and talk-back facility will be considered in the frequency band 150.05-151.5 MHz. The frequency spots 150.3 MHz, 150.9 MHz and 151.07 MHz are earmarked for onsite paging and 151.15 MHz, 151.55 MHz and 150.6 MHz are also earmarked for talk back facility for such systems.

IND.022

The frequency spots 150.350 MHz, 150.750 MHz, 150.850 MHz and 150.950 MHz are earmarked for cordless telephone remote units only.

IND.023

The frequency spot 150.525 MHz is earmarked for All India Radio (between O.B. Vans & Field Staff)

IND.024

The frequency spot 151.250 MHz is earmarked for Film shooting.

IND.025

The requirement of maritime mobile services will be met in the frequency band 156-156.7625MHz.

IND.026

The frequency spots156.375 MHz, 156.475 MHz, 156.575 MHz, 156.850 MHz, 156.675 MHz,156.475 MHz & 156.750 MHz 8268.0 (A)/8266.6 (C) kHz, 12361.4 (A)/12360 (C) kHz are earmarked for Port operations (from shore to ship)

IND.027

The frequency spots 166.875 MHz & 167.725 MHz is earmarked for remote control of E.O.T cranes

IND.028

The frequency spot 166.950 MHz is earmarked for Doordarshan (for use by O.B. Vans)

IND.029

The requirement of Fixed/Mobile services will be considered in the frequency band 223-230 MHz on case by case basis.

IND.030

The requirement of wide area paging and talk back facility may be considered in the Frequency band 276-280 MHz paired with 929-932 MHz on case by case basis.

IND.031

Requirement of two-way radio, NON-PSTN Trunking Services and other captive networks will be met in the frequency band 335.4-367 MHz.

IND.032

The requirement of short range radio may be considered in the frequency band 350-351 MHz.The frequency spots 350.2250 MHz, 350.2375 MHz, 350.2500 MHz, 350.2625 MHz 350.3500 MHz, 350.3625 MHz, 350.3750 MHz, 350.3875 MHz and 350.4000 MHz are earmarked for this purpose.

IND.033

Frequency band 338-340 MHz paired with 348-350 MHz has been earmarked for Public as well as captive mobile radio trunking system. Channeling plan is attached at annexure-1.

IND.034

Additional requirements for radio trunking system may be co-ordinated in the frequency bands 336-338 MHz paired with 346-348 MHz and 340-342 MHz paired with 355-357 MHz on case by case basis.

IND.035

Requirements for digital trunked radio system may be considered in the frequency band 370-400 MHz on case by case basis.

IND.036

Requirements of digital seismic telemetry will be met in the frequency band 406-450 MHz. on case by case basis.

IND.037

Requirements of TETRA trunking system may be considered in the frequency band 450-470 MHz on case by case basis.

IND.038

Requirement of link frequencies for Radio Paging Service will be co-ordinated in the band 450-470 MHz.

IND.039

The frequency spots 461.775MHz, 461.825 MHz, 461.875 MHz ,461.925 MHz , 461.950 MHz are earmarked for Radio Paging Systems for on-site uses only.

IND.040

Requirements of fixed and mobile services will be considered in the frequency band 470-520 MHz on case by case basis.

IND.041

Requirements of fixed and mobile services may be considered in the frequency band 520-585 MHz on case by case basis.

IND.042

The requirement of low capacity links systems (upto 60 voice channels or 4 Mb/s) shall be co-ordinated in the band 622-712 MHz on case by case basis.

IND.043

Frequency band 806-811 MHz paired with 851-856 MHz has been earmarked for mobile trunk radio system to be used predominantly for captive networks.

IND.044

Frequency bands 811-814 MHz paired with 856-859 MHz has been earmarked for spectrum efficient digital mobile trunked radio systems.

IND.045

Frequency band 814-819 MHz paired with 859-864 MHz has been earmarked for mobile trunked radio system to be used predominantly for public networks.

IND.046

Frequency band 824-845 MHz paired with 869-890 MHz has been earmarked for wireless local loop services.

IND.047

Frequency bands 890-902.5 MHz paired with 935-947.5 Mhz has been earmarked for Cellular mobile telephone services.

IND.048

Frequency spots 849.0125/933.0125, 849.0250/933.0250, 849.0375/933.0375, 849.0500/933.0500, 849.0625/933.0625, 849.0750/933.0750, 849.0875/933.0875, 849.1000/933.1000, 849.1125/933.1125, 849.1250/933.1250 MHz have been earmarked for supervisory control and data acquisition system (SCADA).

IND.049

Additional requirements up to 6.2 + 6.2 MHz for cellular mobile telephone service may be co-ordinated on case by case basis in the frequency band 902.5 - 915 MHz paired with 947.5 - 960 MHz.

IND.050

Future development of digital trunked radio system is expected in the frequency band 1453-1465 MHz paired with 1501-1513 MHz.

IND.051

Requirement of cellular and WLL in the frequency band 1700-2000 MHz may be considered on case by case basis. Initially (10+10) MHz in the frequency band 1710-1785 MHz paired with 1805-1880 MHz. Additional (10+10) MHz may also be considered on case by case basis, subsequently in the frequency band 1710-1785 MHz paired with 1805-1885 MHz or in other sub bands in 1700-2000 MHz..... Note: Frequency band 1700-2300 MHz needs to be revisited in longer term perspective taking into account needs of the industry (Attached at annexure -II) and other users as well as those of IMT-2000.

IND.052

Requirements of DECT based system will be considered in the frequency band 1880-1900 MHz on case by case basis.

IND.053

Requirement of Information Technology connectivity will be considered in the frequency band 2.4-2.4835 GHz for spread spectrum based non-interface type systems subject to maximum of 4W EIRP and maximum channel spread of 10 MHz. The use of this band for this purpose is on the basis of non-interference, non-protection and non-exclusiveness. 2-3 selected bands of 10 MHz each have been earmarked in various areas.

IND.054

Low power devices for cable replacement using spread spectrum technology are likely to be developed in the frequency band 2.4-2.4835 GHz.

IND.055

INSAT system is using 2520-2670 MHz for satellite broadcasting service.

IND.056

Requirements for MMDS in the frequency band 2.7-2.9 GHz may be considered on case by case basis upto a maximum of 77 MHz. International recognition for such purpose is not affordable.

IND.057

Requirement of WLL application may be considered in the frequency band 3.3-3.7 GHz on case by case basis.

IND.058

Requirement of MMDS will be considered in the frequency band 27.5-28.0 GHz.

IND.059

Requirements of high capacity dense network may be considered in the frequency band 57-59 GHz.

The following m_a_r_s poll is now closed. Here are the final results:

POLL QUESTION: The most exciting part of Ham Radio you think is(Apart from Disaster communication):

CHOICES AND RESULTS
- JOTA, 3 votes, 60.00%
- Ganesh Visarjan, 0 votes, 0.00%
- Rallies, 2 votes, 40.00%

INDIVIDUAL VOTES
- JOTA
- coilnrs@...
- sandipadiwarekar@...
- vu2hit@...
- Ganesh Visarjan
- Rallies
- madhurajan@...
- vu2jpn@...

If all of us can observe things carefully..
statistics may say 500+ hams in mumbai,
60+ with mars etc etc..
but only 5 votes(i have also not voted) in this poll
why?/,., any body tried to understand???!!!
Do think...

775. Poll Interpretation

Yahoo group: m_a_r_s
Date: 2002-08-08 06:23:38 UTC
From: Nirav Sanghavi
Topic: 775 Message: 775

> 1. Re: Poll results for m_a_r_s

> why?/,., any body tried to understand???!!!

Hi Kiran and all in the group,

This poll things makes no sense because of skewing due to lack of response. NLF reported at the MARS AGM that Ganesh Visarjan was the most attended MARS activity while this (unvoted) poll said it was last. With 5 votes, can we say more. Besides, how many members are on the egoup and of that how many respond. I for one missed it completely since I was away and checked my mail after the poll results were declared.

So now what are we going to do? May be try a poll on the efficacy/popularity of polls. At least that way, the results will be self-answering :-)

> 2. Fwd: CHOCOLATE MATHEMATICS
> From: "parin gangar" <paringangar@...>

Parin, can you please send me your mail mentioned above offlist since I do not get to see it in digest mode.

Finally, kudos to Sarla for being a befitting chAIRwoman with both the contest and the gravity tests.

776. Re: [m_a_r_s] Poll Interpretation

Yahoo group: m_a_r_s
Date: 2002-08-09 05:54:01 UTC
From: Prashant Koli
Topic: 775 Message: 776

I fully agree with Nirav.
Besides what Nirav has said I would like to add that in any poll the purpose of poll should be known beforehand; this is simply a wrong application.Secondly the tool chosen was simply wrong.It could give only one choice (as far as I know)...so those who have voted might have given their first choice only; and to conclude or infer on that basis is simply outragious.
Remember the famous quote " There are three types of Lies: Lies,damn Lies and Statistics ".
Well, this is not to offend anybody but these are my two pence.
When using statistical inference model one should be extremely careful.

From: Sandip Adiwarekar
Topic: 777 Message: 777

Hello everybody!!!

FOR YOUR INFO
==========
When you join a Yahoo! Group, your membership is associated with a specific email address. If that email address isn't connected to the Yahoo! ID you use to access the group on the Web; is not verified; or is connected to more than one of your Yahoo! IDs, some of your e-group memberships may not be displayed on the "My Groups page".

The "Membership Wizard" can help you locate your group memberships using the information listed in your Account Info. Yahoo Site will look up the information for that Yahoo! ID.

"THING YOU NEED TO DO"
==========
whenever you login to egroup via the browser,
goto http://groups.yahoo.com/mygroups

Don't see all your groups? Use "Membership Wizard" to locate them.
i.e. http://groups.yahoo.com/memwiz

Logging to the group via browser is usefully
as you all know that Poll votes are not collected via email.
To vote, you must go to the Yahoo! Groups web site.

Access thru browser will also help you to access the other sections
of egroup like Chat, File, Photos, Bookmarks, Database,
Membership details and Calendar.

73s,
Sandip - UGO

Hello everybody,

This is just an observation :

Although some MARS members are doing a commendable job in running ham classes, propagating the hobby by giving good presentations etc. etc., the rest of us hams can do our bit by making good use of `mars egroups', instead of using it to just send messages.

Since we all surf the net pretty often, it would be interesting if we could share on the egroups some interesting finds, maybe a link to a fascinating amateur radio site, or a review of some new rig or an antenna or probably a ham accessory, software, or even some `ham humour' or an interesting frequency !

Vijay VU2VVP

785. SOS-I

Yahoo group: m_a_r_s
Date: 2002-08-13 15:53:51 UTC
From: vu2_2000
Topic: 785 Message: 785

Hi All,
When I had posted msgs abt dxing thru internet some one and half yrs back..or even more...it looked like ahead of time to our hams.If you remember well we were to provide a sort of (crude)link to Sheffield repeater on Independence Day eve special net of the Year 2000.In fact G3ZHI, OM Ian was continously asking to put him onto our net...we were using Iphone4.5 and that time I was using MTNL's copper for connectivity (unlike cable now).
Well,the many innovative things that we were to do...atlest in India...have not materialised ....so sad!
For now,giving below interesting reading on History of origin of SOS, which I had posted on Mars_classes group for students. Please read on:

Mystery, intrigue as well as misinformation surrounds the origin and use of maritime distress calls. The general populace believes that "SOS" signifies "Save Our Ship." Casual students of radio history are aware that "CQD" preceded the use of "SOS." Why were these signals adopted? When were they used? Why did one replace the other? What is one likely to find by digging a little deeper?
The practical use of wireless telegraphy was made possible by Guglielmo Marconi in the closing years of the 19th century. Until then, ships at sea out of visual range were very much isolated from shore and other ships. A ship could vanish from the high seas, and no one would know until that vessel failed to make a port connection. Marconi, seeing that wireless would not compete with wire telegraphy for land based communication, concentrated his efforts on ship to shore communications. Ships equipped with wireless were no longer isolated.
The first use of wireless in communicating the need for assistance came in March of 1899. The East Goodwin Lightship, marking the southeastern English coast, was rammed in a fog in the early morning hours by the SS R. F. Matthews. A distress call was transmitted to a shore station at South Foreland and help was dispatched.
By 1904 there were many Trans-Atlantic British ships equipped with wireless. The wireless operators came from the ranks of railroad and postal telegraphers. In England a general call on the landline wire was a "CQ." "CQ" preceded time signals and special notices. "CQ" was generally adopted by telegraph and cable stations all over the world. By using "CQ," each station receives a message from a single transmission and an economy of time and labor was realized. Naturally, "CQ" went with the operators to sea and was likewise used for a general call. This sign for "all stations" was adopted soon after wireless came into being by both ships and shore stations.
At the first international congress of wireless telegraphy in 1903,

the Italians recommended the use of "SSSDDD" to signal an emergency. "D" had previously been used internationally as the signal for an urgent message. The origin of "S" is not known, but it may have come from the first letter of the word ship, indicating a ship in distress. The sending of "SSSDDD" would signal all other stations to stop sending and leave the channel open for emergency traffic. Though discussed, it was not adopted. Deciding on a distress signal was put on the agenda for the next meeting in 1906. "DDD" would later be adopted for the silent signal, indicating all stations must cease sending.

In 1904, the Marconi company filled the gap by suggesting the use of "CQD" for a distress signal. It was established on February 1 of that year by Marconi Company's circular No. 57. Although generally accepted to mean, "Come Quick Danger," that is not the case. It is a general call, "CQ," followed by "D," meaning distress. A strict interpretation would be "All stations, Distress." In the U.S. Senate hearings following the Titanic disaster, interrogator Senator William Smith asked Harold Bride, the surviving wireless operator, "Is CQD in itself composed of the first letter of three words, or merely a code?" Bride responded, "Merely a code call sir." Marconi also testified, "It [CQD] is a conventional signal which was introduced originally by my company to express a state of danger or peril of a ship that sends it."

At the second Berlin Radiotelegraphic Conference of 1906, the subject of a distress signal was again addressed. The distress signal chosen was "SOS." (The American distress signal "NC" for "Call for help without delay" was not adopted, although it remains as the international flag symbol for distress to this day.) Popular accounts portray the adoption of "SOS" as being derived from "SOE," which the Germans had used as a general inquiry call. These accounts suggest there was objection because the final letter of "SOE" was a single dot, hard to copy in adverse conditions. The letter "S" was substituted accounts say, for three dots, three dashes and three dots could not be misinterpreted.

Popular accounts of the origin of "SOS" fail to mention that the Germans had used "SOS" for a distress signal. They adopted the signal "SOS" for distress as well as "SOE" for inquiry on April 1, 1905, a year before the Berlin conference. The Electrician, May 5, 1905 published "German Regulations for the Control of Spark Telegraphy" which stated:

"...---..., "Distress" signal (Notzeichen). This is to be repeated by a ship in distress until all other stations have stopped working."

Unfortunately, the 1906 Conference proceedings do not give an account of the discussions nor the origin of SOS. The proceedings merely specify what the signal will be. In the Service Regulations Affixed to the International Wireless Telegraph Convention, paragraph 6a, "Signals of Transmission" states::

"Ships in distress shall use the following signal: ...---... repeated at brief intervals."

The Marconi Yearbook of Wireless Telegraphy and Telephony , 1918

states, "This signal [SOS] was adopted simply on account of its easy radiation and its unmistakable character. There is no special signification in the letter themselves, and it is entirely incorrect to put full stops between them [the letters]." All the popular interpretations of "SOS," "Save or Ship," "Save Our Souls," or "Send Out Succour" are simply not valid. Stations hearing this distress call were to immediately cease handling traffic until the emergency was over and were likewise bound to answer the distress signal. Although the use of "SOS" was officially ratified in 1908, the use of "CQD" lingered for several more years, especially in British service where it originated. It is well documented in personal accounts of Harold Bride, second Radio Officer, and in the logs of the SS Carpathia, that the Titanic first used "CQD" to call for help. When Captain Smith gave the order to radio for help, first radio officer Jack Phillips sent "CQD" six times followed by the Titanic call letters, "MGY." Later, at Brides suggestion, Phillips interspersed his calls with "SOS."

In SOS to the Rescue, 1935, author Baarslag notes, "Although adopted intentionally in 1908, it [SOS] had not completely displaced the older "CQD" in the British operators' affections." Marconi in his U.S. Senate testimony on the Titanic disaster said, "I should state that the international signal [SOS] is really less known that the Marconi Co.'s [CQD] signal." (It is interesting to observe that Marconi was waiting in New York to return home to England on the Titanic.)

The first use of wireless in the rescue of an American ship was in 1905. Off Nantucket, the operator of Relief Ship No. 58, a light ship, sent "HELP" in International Morse and American Morse. (Trans-Atlantic ships used International Morse and coastal ships used American Morse. The use of American Morse on seagoing vessels ceased in 1912 although it survived for many years on the Great Lakes.) A Naval Radio Station in Rhode Island answered the "HELP" call.

The rescue of 1,500 passengers and crew from the Republic and the Florida by the Baltic in January of 1909, was the defining moment in wireless rescue history. The White Star liner Republic was rammed in a dense fog by the Italian Florida. Wireless operator Jack Binns of the Republic, sent out a "CQD." (The Florida was not wireless equipped.) The Baltic came to the rescue after hunting for the Republic in the fog for many hours. Those concerned with the maritime industry now realized the importance of equipping ships with wireless.

The number of ships equipped with wireless grew rapidly after the Republic disaster. For example, at the end of 1909 the Marconi Co. owned and operated 143 wireless stations on the high seas. By the summer of 1911, the number grew to 303 stations. By the end of 1912, there were 580 shipboard wireless installations.

The U.S. Department of Commerce, Bureau of Navigation publication, Important Events in Radio telegraphy, 1916, recorded maritime disasters in which wireless played a part in rescue on the seas and the Great Lakes. From 1899 to 1908, there were nine such events. In

1909 there were 18 rescues and in 1915, 35 rescues. The following quote, though not directly rescue related, demonstrates the extreme importance of shipboard wireless:
"November, 1914 -- Great Lakes storms destroyed 19 vessels, none of which were equipped with wireless. All vessels having radio apparatus installed received warning of the coming storm and sought safety."

The first recorded use of "CQD" by an American ship was in 1908 by the steamer Santa Rosa off the coast of California. Commander Richard Johnstone records this in his memoir My San Francisco Story of the Waterfront and the Wireless, 1965. The first recorded American use of "SOS" was in August of 1909. Wireless operator T. D. Haubner of the SS Arapahoe radioed for help when his ship lost its screw near Diamond Shoals, sometimes called the "Graveyard of the Atlantic." The call was heard by the United Wireless station "HA" at Hatteras.
A few months later, the SS Arapahoe received an "SOS" distress call from the SS Iroquois. Radio Officer Haubner therefore has the distinction of being involved in the first two incidents of the use of "SOS" in America, the first as the sender and the second as the receiver. Being slow to adopt international wireless standards, the U.S. did not officially adopt "SOS" until 1912.
Besides "CQD" and "SOS," "XXX" was used as an urgent signal, being less urgent than "SOS." "XXX" was used when there was concern for the safety of a ship or the safety of person on board or a person sighted from on board. "TTT" was used as a safety signal to precede ice, storm and other navigational warnings including coastal artillery practice. "MEDICO" was used by ships without a doctor seeking medical advice from another ship or shore station. During W.W.II, the signal "SSSS" was used for "submarine sited".
The distress call by radio telephone is the two words "MAY DAY." This corresponds to the French pronunciation for "m'aider", which means "help me." On voice, the "XXX" (urgent) equivalent is the word "PAN." This corresponds to the French pronunciation for "panne", which means "mishap" or "accident." The "TTT" (safety) equivalent is "SECURITY." This corresponds to the French pronunciation for "sécurité", which means "safety." The calling frequency for voice was 2182 kilohertz.
During the investigation into the Titanic disaster, Guglielmo Marconi stated that he was experimenting with a device that could be used as an automated alarm for distress signals. Upon hearing a series of signals, an alarm bell would ring. Some European nations put these alarms into service. A sequencing device was connected to the output of the receiver. Upon the reception of four or more dashes of exactly four seconds duration, a device rang an alarm bell in the radio shack, the radio officer's quarters and on the ship's bridge. The system was employed as a substitute for a second operator. Because the system could miss a call under adverse conditions or ring the bell in error, American radio authorities deemed it unreliable and not a substitute for another on duty operator. Americans later mandated the used of automatic alarms with the Communications Act of

1934.
At the third international radiotelegraph conference in 1912, it was agreed that ships would listen for distress signals on a wavelength of 600 meters. This is a frequency of about 500 kilohertz. (The calling and distress frequency for the Great Lakes was 410 kilohertz.) International law required each ship to cease transmitting for three minutes at 15 and 45 minutes past the hour. During this interval they were required to listen for distress calls. At this conference, the recent Titanic disaster was fresh on the minds of the delegates, particularly the British. Consequently, many advances were made concerning the cooperative use of wireless for safety at sea.
It is interesting that the use of "CQ" as a general call was displaced by "QST" in 1911. Radio amateurs, or hams as they are more commonly called, continue to use both. "CQ" is used as "calling any station" and "QST" is used as "calling all stations"
Wireless and radio literature of the early and mid 20th century is rich in documenting the use of maritime distress signals. Only the surface of the subject is covered here. Yet, perhaps next time a reference to "SOS" is seen, there will be a little more appreciation of its lineage.

786. SOS-II

Yahoo group: m_a_r_s

From: vu2_2000
Topic: 786 Message: 786

Claim: The Titanic was the first ship to use SOS as a distress call.
Status: False.
Example: [Butler, 1998]
. . . at 12:45 A.M. April 15, 1912, the Titanic sent out the first SOS in history.
Origins: One trait of human nature is that we tend to associate notable achievements with important people and momentous events. If a memorable quote comes out of the mouth of an obscure person, we inevitably attribute his words to someone more famous who was likely to have said such a thing. (Hence historical and literary figures such as Abraham Lincoln and Mark Twain have been given credit over the years for originating hundreds of witty and pithy sayings they never uttered.)
The Titanic's sinking was certainly one of the most momentous events of the twentieth century, and one of the enduring images of Titanic mythology is that of the senior wireless operator, Jack Phillips, hunched over his telegraph key, tapping out a desperate distress signal over and over until the very last moment. Even after released from duty by his captain, Phillips remained at his post and continued to transmit without regard for his personal safety, stopping only when the Titanic's power finally failed and he could send no more. By then it was too late: All the lifeboats were long gone, and the Titanic was only minutes away from her final plunge into the sea. Phillips did not survive.
Naturally, then, we want to imbue the death of Jack Phillips and the loss of Titanic with some extra significance, and one of the manifestations of that desire is the claim that Phillips (and the Titanic) sent the very first SOS distress call in history. It is a "fact" that has been reiterated by many writers over the years, but it is not true.
In 1912, if marine wireless communication was no longer in its infancy, it certainly wasn't very far into adolescence. Rival wireless companies from different countries often refused to relay each other's messages (except for emergency situations), and international standards for such important matters as ship identification and distress signals were not in place. A 1906 International Conference on Wireless Communication at Sea held in Berlin attempted to sort out some of these issues, including the standardization of the call letters to be used by ships in distress. At the time, British wireless operators generally used the call letters CQD as a distress signal: CQ representing the general call for other ships in the area (i.e., "seek you"), with a D added at the end to signify "danger" (followed by the latitude and longitude of the ship in distress). The Germans disliked this method and countered

by proposing SOE, but this offering was rejected because the final E (represented by a single dot in Morse code) could too easily be lost in transmission due to interference. The solution the conference finally settled on was the signal SOS, its dot-dot-dot dash-dash-dash dot-dot-dot pattern being both distinctive and easy to transmit. (Despite later claims, the letters SOS were not chosen because they represented "save our ship" or "save our souls" or any other phrase.)
Although Britain and several other countries had voted to adopt the Berlin conference's proposals by 1908, wireless operators on British ships largely ignored them. Thus when the Titanic struck an iceberg and started to sink in April 1912, Jack Phillips began transmitting the call CQD as a distress signal to other ships in the area. It was not until Harold Bride, the Titanic's junior wireless operator, jokingly suggested "Send SOS; it's the new call, and this may be your last chance to send it!" that Phillips began to intersperse SOS with the traditional CQD call.
But standard or not, this was not the first use of SOS as a distress signal. Ships from other European countries had already employed it, and earlier that same month the French liner Niagara had issued an SOS when it was damaged by ice in roughly the same part of the Atlantic as the Titanic. The Titanic may have been the first British ship to issue an SOS, but that's about the only distinction it can claim in this area. It was largely because of the publicity surrounding the Titanic disaster, however, that SOS soon became the standard distress call for ships at sea.

>In 1912, if marine wireless communication was no longer in its
>infancy, it certainly wasn't very far into adolescence. Rival
>wireless companies from different countries often refused to relay
>each other's messages (except for emergency situations), and

>international standards for such important matters as ship
>identification and distress signals were not in place. A 1906
>International Conference on Wireless Communication at Sea held in
>Berlin attempted to sort out some of these issues, including the
>standardization of the call letters to be used by ships in distress.
>At the time, British wireless operators generally used the call
>letters CQD as a distress signal: CQ representing the general call
>for other ships in the area (i.e., "seek you"), with a D added at the
>end to signify "danger" (followed by the latitude and longitude of
>the ship in distress). The Germans disliked this method and countered
>by proposing SOE, but this offering was rejected because the final E
>(represented by a single dot in Morse code) could too easily be lost
>in transmission due to interference. The solution the conference
>finally settled on was the signal SOS, its dot-dot-dot dash-dash-dash
>dot-dot-dot pattern being both distinctive and easy to transmit.
>(Despite later claims, the letters SOS were not chosen because they
>represented "save our ship" or "save our souls" or any other phrase.)
>Although Britain and several other countries had voted to adopt the
>Berlin conference's proposals by 1908, wireless operators on British
>ships largely ignored them. Thus when the Titanic struck an iceberg
>and started to sink in April 1912, Jack Phillips began transmitting
>the call CQD as a distress signal to other ships in the area. It was
>not until Harold Bride, the Titanic's junior wireless operator,
>jokingly suggested "Send SOS; it's the new call, and this may be your
>last chance to send it!" that Phillips began to intersperse SOS with
>the traditional CQD call.
>But standard or not, this was not the first use of SOS as a distress
>signal. Ships from other European countries had already employed it,
>and earlier that same month the French liner Niagara had issued an
>SOS when it was damaged by ice in roughly the same part of the
>Atlantic as the Titanic. The Titanic may have been the first British
>ship to issue an SOS, but that's about the only distinction it can
>claim in this area. It was largely because of the publicity
>surrounding the Titanic disaster, however, that SOS soon became the
>standard distress call for ships at sea.

Icom IC-R5 Communications Receiver

Specifications
Vintage 2002
Type Handheld
Range 150kHz - 1309.995MHz
Channels 1000
Banks 18 (max)
Search Bands 25
Steps TBD
Modes AM, FM & WFM
Priority TBD
Conversion Triple
IFs 1=266.7 MHz
2=19.65 MHz
3=450 kHz
Sensitivity TBD
Selectivity AM/FM = - 9dB@ 15kHz
-60dB@ 30kHz
WFM = - 6dB@150kHz
Scan TBD chan/second
Search 30 steps/second
Audio 100mW at 10%THD
Current 170 mA (max vol)
100 mA (recv)
41 mA (power save)
Power 3V int (2xAA)
6V ext
Size 2.3(W) x 3.4(H) x 1.1(D) in
58(W) x 86(H) x 27(D) mm
Weight 6.5oz/185g
Interfaces SMA, earphone/SP
Antenna SMA, 50 ohm
Accessories Antenna, belt-clip, manual,
handstrap, 2 NiCds w/charger
(some models)
Features S-meter
CTCSS decode/search
6-letter alpha-tags
AM bar antenna
Freq offset
Freq duplex
APO
Power save
Backlight

Search skip
Rotary

ＱＲＰ運用の醍醐味を７０３で。 ＨＦオールバンド＋５０ＭＨｚオールモード１０Ｗ機。

794. IC-703

Yahoo group: m_a_r_s
Date: 2002-08-26 03:32:51 UTC
From: Prashant
Topic: 794 Message: 794
Attachments: 5 described; binary payloads are missing from this source WARC

IC-703

Get a taste of QRP use with the new IC-703.
HF all band + 50MHz all mode 10W machine.

The IC-703 name machine furthermore evolves the broadband technology which is cultivated with 706MK II G, builds in the automatic antenna tuner which is covered to this size to 1.9 - 50MHz. Furthermore it applies the leading digital technology which eye COM is proud, it actualizes various digital functions by the fact that the DSP is built in. The QRP machine being, all compromise does not exist. Of course, field use is considered, the 9V DC. the transmission output 5w is actualized even with the 6v with the economical electrical design which loads the broadband PA of new development. To the one which you feel high level in the 5w machine it is unsatisfactory from the person who QRP use is expected, 703 reports certain satisfaction.

Main merits

---
* 1.9 - 50MHz band full is covered the automatic antenna tuner built-in which
In this class external connection builds in the natural automatic antenna tuner to the compact body. At the time and the like of field use and load use, when connecting the shortening type antenna whose effective frequency zone is narrow, tremendous power is shown. In addition, the antenna tuner AH-4 for the long wire (option) it corresponds.

* DSP unit standard equipment
The analog signal which it receives is digitally processed, the noise component and the signal component are separated, the noise reduction function which the intended signal makes surface standard equipment. The noise blanker - with combined use power is shown in removal of various noises. Furthermore, it loads also the automatic notched filter function which removes the radio interference of the CW and the RTTY signal etc., detecting the signal which becomes the interference of reception automatically, it cancels.

* Energy-saving PA section of new design
Although covering the HF all band + 50MHz band with one PA, low voltage / low you adopt the PA section of the new design which actualizes consumed electric current. 9. Even at at the time of 6v connection, all the band 5W outputs (the AM mode 2W) it actualizes. Furthermore at the time of 13.8v connection all the band 10W outputs (the AM mode 4W) it can obtain.

* High sensitivity reception section
Reception sensitivity reaches, in the HF band - 16dB μV (for 10dB S/N), & in the 50MHz band - 18dB μV (for 10dB S/N) achieves the specifications which are equal to the first class fixed-station radio. Called the QRP machine, but all compromise was displaced, reception sensitivity of the highest level is actualized.

* Supports QRP use the power set function which
Until recently, transmission output inscription of the machine had used the Hi / the Mid /

the Low etc., but as in the fixed-station radio, setting of transmission output is indicated numerical inscription (the 10W / 5W / 2.5W / 1W / 0.5W) with in clearly, it actualizes the output setting whose precision is high. For example when transmission output the 5W (50% of rated output) setting, as for the machine RF meter shows half deflection until recently, but because the scale range of RF meter changes in order with 5W output to become the full scale, just as the 5W machine it is possible to use.

* Energy conservation mode
Low because consumed electric current is actualized, as for the PA section of course thing, the PLL circuit, the DC9V. lowering power source voltage to the 6v, until the antenna tuner section, by assuring the high improvement of efficiency of each circuit, it operates. Furthermore, when power source voltage is made below the 11V, current limiting various amplifier sections, it loads also the energy conservation mode which holds down consumed electric current.

* Memory keyer built-in of upper-class machine transferring
You can remember to maximum of 50 letters, it loads the memory keyer of the 3ch. When forwarding the definite form sentence in the contest and the like, it is the function which the treasure is done very much. In addition, the multi-function electronic keyer, CW full break-in function, CW reverse function and CW reception pitch variable function et cetera are loaded, comfortable CW use is actualized.

* Mobility is pursued front panel separate
From load the on air to the HF band, in addition either use with field does not become pain, 167 (W) x 58 (H) x 200 (D) mm (projections not included) it actualizes the compact body. Furthermore, the front panel separate system which can correspond also installation to the car to flexible was adopted. (The separate cable OPC-581 or the OPC-587 is needed)

* Option filter bay equipment
Adjusting to operational style and the mode which is used, it can select, various crystal filters (option) you prepared. It can select 1 from the midst of in the chart and can install.

* Note
IC-703 uses AF-DSP, not IF-DSP. It is a conventional dual-conversion superheterodyne.

Option filter Kind Passing bandwidth
FL-52A 455kHz CW/RTTY narrow 500Hz
FL-53A 455kHz CW narrow 250Hz
FL-222 455kHz SSB narrow 1.8kHz
FL-257 455kHz SSB wide 3.3kHz
FL-65 (standard equipment) 455kHz SSB 2.4kHz

* RTTY mode of FSK system
It loads the real RTTY mode of FSK system. Discharge of the tone whose quality is high in comparison with the AFSK system which is done with SSB mode is possible. Furthermore RTTY narrow mode (option) it corresponds.

* Also on air station obvious glance band scope function
It sweeps the range of the step which sets reception frequency on the center, graphics is indicated it loads the band scope function which in display. On air station and being less crowded frequency can be discovered easily.

* Other functional groups
- Large-sized indicatory department of invar color.
- General coverage reception 0.03 - 60MHz.
- TCXO of frequency stability 0. 5ppm standard equipment.
- Simple mode.
- SWR graphical representation function.
- Band stacking register.
- Reception pre-amp.
- AGC time constant change.
- RIT function.
- Level variable type noise blanker.
- IF shift radio interference removal function.
- Nighttime operation enhanced by key illumination.
- Quick band change.
- Frequency speech function (option).
- Total 105 the memory channel which is.
- AF speech compressor.
- VOX function.
- RF GAIN / SQL knob.
- CI-V correspondence.
- 9600bps data communication correspondence.
- Emergency traffic communication setting frequency (4630kHz) correspondence.

* Upgrade option group
AH-2b: Antenna element for load / based ¥ 23,800
AH-4: Outside installation type automatic antenna tuner ¥49,800
AT-180: Automatic antenna tuner ¥ 44,800
CT-17: CI-V level converter ¥12,000
FL-52A: 455kHz CW / RTTY narrow filter 500Hz ¥16,500
FL-53A: 455kHz CW narrow filter 250Hz ¥16,500
FL-222: 455kHz SSB narrow filter 1. 8kHz ¥18,000
FL-257: 455kHz SSB wide filter 3. 3kHz ¥16,500
HM-103: Rise / down switch equipped hand microphone: Modular type (for repair) ¥4,500
MB-62: Mobile bracket, substance or AT-180 ¥1,500
MB-63: Controller bracket ¥1,000
MB-65: Mount based ¥2,000
MB-72: Carrying steering wheel ¥800
OPC-581: Front panel separate cable < 3. 5m > ¥3,500
OPC-587: Front panel separate cable < 5m > ¥4,500
OPC-589: Conversion cable, modular -> 8 pin microphone connector ¥2,000
OPC-598: 7m type ACC cable, AT-180 13 pin ¥3,500
OPC-599: Conversion cable, 13 pin -> 8 pin + 7 pin ¥ 3,000
SM-20: Rise / down switch equipped stand microphone ¥14,800
SP-7: Speaker outside fixing ¥4,800
SP-10: Speaker outside mobile ¥4,800
UT-102: Speech synthesis unit ¥4,500

(As for price all classified by taxes)

Main specifications

General Frequency range Reception operating range 30kHz - 60MHz
Guarantee range 500kHz - 29.999MHz
50.000MHz - 54.000MHz
From transmission frequency 1.9MHz band all the amateur bands to 50MHz band,
And 4630kHz

Radio wave type LSB/USB, CW, RTTY, AM and FM
Memory channel number Total 105
Antenna impedance 50 ohms
Antenna terminal System M (SO-239) type 1
Frequency stability ±0.5ppm
Common configuration Negative ground
Category temperature range -10oC - +60oC
Frequency resolution Or less of the smallest 2 Hz
Power source voltage DC 9 - 15.87V
Consumed electric current (9.6v) When receiving rated largest 450mA (at the time of DSP off)
At the time of reception expecting (standby) 250mA (at the time of DSP off)
When transmitting largest 2A (5w)

External size 167 (W) x 58 (H) x 200 (D) mm (projections are excluded)
Weight Approximately 2kg
Transmitter Transmission output SUPPLY V. SSB/CW/RTTY/FM AM
13.8V supply 10W - 0.5W 4W
9.6V supply 5W - 0.5W 2W

Modulation system SSB balanced modulator
FM reactance modulation
AM low level modulation
Harmonic and spurious output -50dB below (below 30MHz band)
-60dB below (above 50MHz band)

Carrier suppression Better than -40dB
Unwanted-sideband suppression Better than -50dB
Microphone impedance 600 ohms
Receiver Reception system Dual-conversion superheterodyne system
Receiver sensitivity (pre-amp ON) SSB/CW/RTTY/FM AM FM
0.5 - 1.8MHz +22dB μV
1.8 - 29MHz -16dB V ⋆ 1 6dBμV -6dBμV ⋆ 2
50 - 54MHz -18dBμV 0dBμV -12dBμV

⋆1 except the ranges 4 - 4.5MHz and 8 - 9MHz.
⋆2 It limits to the range of 28 - 29.7MHz.
Selectivity
(Optional filter not installed) SSB/CW
-6dB: >2.4kHz. -60dB: <4.5kHz.

AM/FM narrow
-6dB: >8 kHz. -50dB: <30 kHz.

FM
-6dB: >12kHz. -50dB: < 0 kHz.

Image rejection Better than -70dB
Audio output 1W (into 8 ohm load)

* Rating by JAIA (the Japanese amateur radio equipment manufacturer's association) depends on measurement method.
* Rated * specifications * are subject to modification without notice for product improvement.
* Color of the product with respect to related to printing, are times when it is different from actual ones more or less.

Hi

Last year inspite of late start JOTA was huge sucess, MARS had sucessfully hosted JOTA with 5 station in Mumbai & Thane and collectively we were able to put 944 students on the Air.

This year we plan to increase the nos to 2000+ ,but we will require lot of manpower(HAMS) to acheive the same. Therefore please confirm your participation and let me know the same at the earliest.

Clear DayMUMBAI AMATEUR RADIO SOCIETY

Dear Members,

The poll created by Parin Gangar showed a very poor response to ganesh visarjan, I am quite sure that was because most you guys did not bother to respond to the poll (Including myself).

Our past records reflect that Ganesh Visarjan has maximum number of participants as compared to the other events. (20th September 2002).

All members are therfore requested to confirm their participation with me by email or by phone.

your earliest reply will help in planning and coordination.

Clear DayMUMBAI AMATEUR RADIO SOCIETY

Dear Members,

You may be aware that the Ham Radio Classes conducted by MARS at Churchgate & Thane are going great guns. We have almost 95% attendence. Field trips were conducted for both the batches, which the students have enjoyed thoroughly.

The reason not much news have been put up on our M_A_R_S e group is becuase a special new E Group has been created exclusively for the students and the faculities (Teachers).

There are 73 members on this E Group and students and faculites and make the most usage of it.

The examinations are likely to be conducted on 9th & 11th September 2002. About 85 students are likely to appear for these exams.

Many of our members have and are putting in great efforts for the classes.

MUMBAI AMATEUR RADIO SOCIETY

Dear Members,

The poll created by Parin Gangar showed a very poor response to ganesh visarjan, I am quite sure that was because most you guys did not bother to respond to the poll (Including myself).

Our past records reflect that Ganesh Visarjan has maximum number of participants as compared to the other events. (20th September 2002).

All members are therfore requested to confirm their participation with me by email or by phone.

your earliest reply will help in planning and coordination.

Hi

Last year inspite of late start JOTA was huge sucess, MARS had sucessfully hosted JOTA with 5 station in Mumbai & Thane and collectively we were able to put 944 students on the Air.

This year we plan to increase the nos to 2000+ ,but we will require lot of manpower(HAMS) to acheive the same. Therefore please confirm your participation and let me know the same at the earliest.

Small EH Antenna
from KE0VH on August 19, 2002
View comments about this article! (http://www.eham.net/articles/3586#comments)
We all have antenna "issues" of some sort. Be it small lots, apartment dwelling, non-ham spouses who do not think that a 50 foot tower and triband beam are not things of beauty. And, by nature, most of us hams love to experiment. And, I am also a broadcast radio engineer, so antennas for me are something of great interest as I have had the opportunity to play with directional AM arrays and 50 kW transmitters. But, with all that said, while having room for antenna's, my family is not very receptive to towers or RFI or wires all over the yard. Dipoles hidden in a tree are adequate, but performance at 12 to 15 feet above ground could be much better, and a 40-meter wraparound dipole through the trees and terminating in a twist in the garage leave a lot to be desired. A 10-meter vertical dipole works well, but of course when 10 is open you can work the world on a wet noodle. However, there is no directivity to it, and sometimes the bigger stations (even those with monoband 3 element yagi's) make my signal sound like I am using a wet noodle. And, ever problematic is RFI in the TV's, VCR's and the next-door neighbors house only 20 feet away from the dipoles. So, how do you solve all those problems with minimal time and still have effective and even more than effective antennas? Pretty insurmountable or so it would seem.
But, we have ways to make the antenna's talk. Maybe you have read or heard about the CFA antenna's being tested in Egypt and the UK. What are CFA's? Crossed field antennas. Only 2% of a wavelength in size, nearly 100% efficiency, setting up the electric and magnetic fields in a much different way. That?s right. And one of the benefits of the way the fields are set up is that EMI is virtually eliminated. I didn't typo here. And, as a broadcast engineer I think a 500 foot radiator (or 160 feet, or yagi?s, towers and the like) is a thing of beauty, and you should have at least a quarter wave vertical with a good ground system to radiate properly, setting up the electric and magnetic fields according to how Mr. Hertz back in the 1880's developed the basic antenna we all have used. All these details can be found by going to the www.eh-antenna.com site. Far more detail and explanation than I will put here, so check out the site to find out more. Also, Jack, W0KPH has done a lot of work with the EH types of antenna's (very successfully). Go to http://www.qsl.net/w0kph/ I have talked with Jack at length and am very excited about the design.
To that end, I constructed w0kph's 20-meter antenna and tested it out. Fellow amateurs: I was as amazed as you are about to be. My test antenna was made out of a cardboard mailing tube 14 inches long and 2 inches wide.

As you will see when you visit the websites, the cylinders you see in the picture are made out of aluminum foil, the coil and link for the coax are covered in electrical tape made out of #22 wire to hold them in place after adjustment, and the antenna was put on a broomstick about 3 feet above the floor in my basement shack/laundry room. This is about 3 feet below ground level. The measurements to start with and full description with pictures are all on the w0kph web page. I then proceeded to trim the coil back about half a turn from the original 15 turns, and adjusted the link (where the coax connects) to where I started to hear signals on my TS-120. Then, testing with power applied, I got a 2 to 1 match, and then with more, down to 1.3 to 1. WOW I thought, it takes power. And, the

signals I can hear were about an S unit to 1 1/2 units below what the dipole outside was hearing. I thought, well, I am below ground level here. A little more adjustment and I got the match flat, and I was hearing W6XX in the San Francisco area with a signal just barely below that of the dipole. Now, one of the things noticed too was that the noise level present on the dipole of about S3 was practically non existent on the EH. Again, I was in the basement with the antenna less than 3 feet away from the clothes dryer and about 8 feet away from me and the radio, but the low noise level of this antenna is intrinsically low due to the way the E field (electric) and H fields (magnetic) are generated. And because the frequency range of the circuit is small, the EH Antenna harmonic radiation is all but nonexistent, but the bandwidth is wider than a conventional Hertz antenna. This from the www.eh-antenna.com website written by Ted Hart, but my experience would indicate that this is so.
So, I thought, here goes nothing. W6XX closed down his QSO and I gave him a call. HE CAME BACK to me and we proceed to exchange the usual signal reports, he gave me a 55-57 report while he was S7-8. I couldn't believe it. I was floored! (Or below the main floor in the basement) We had a 20-minute QSO, and discussed the antenna. He was skeptical as you would expect and probably you yourself are. I was too. Now, I still want to get the EH antenna outside and up in the air for further testing, but I believe it will perform as Ted Hart of the www.eh-antenna.com website and Jack, www.qsl.net/w0kph have had antenna's perform.
And, unbelievable, but folks have constructed a 160 meter antenna only about 6 to 8 feet tall that works incredibly, and the 10 meter version is 5 to 6 INCHES long, and 1 inch in diameter, made out of PVC pipe. That is the next one I will build to put up against the 10-meter vertical dipole. Check these out. They really do work. I will be putting up more information and details as I have time to work on them. If you get to try some of these for yourself, email W0KPH and myself and let us know how they work for you.

Folks, you don't get something for nothing. The law of physics can not be changed in order to make something look better than it is. The old saying 'If it's to good to be true...it is' and that is true in this case as well.

Mr. Kurt Sterba, who writes a column for WORLD RADIO magazine states in Septembers issue,pretty much that you can not change the laws of physics no matter how much tin foil you wrap on a toilet paper tube. His final comments are " lets see some actual field tests done on an antenna range against known antennas, (dipole, 3 ele yagi, etc.) and see if the results are there. The theory is wrong and the antenna appears Not to work as claimed.Until then I will stick with conventional antenna. They do work."

Reminds me of the show on unsolved mysteries, where they had a certified psychic back up a expermental ghost hunter as to the effectivness of his new equipment. First , just who certifies psychic's and does it mean anything? and how does infrared heat detectors locate ghosts?? Its like pulling your self off the ground with your own boot straps.. Can't be done..ain't so. and I wasn't born yesterday.

By the way if you look up their website on the internet they will be glad to sell you one of these for a small amount of cash... hmmmmmmmmmm

If it looks like poo-poo and smells like poo-poo, I don't have to taste it to make sure.. tom N6AJR

I'll believe in the EH antenna when it eats into sales of Bugcatcher, Screwdriver, Hamstick, Hustler, Isotron, Isoloop, and other compact/mobile HF antennas. If it's such a great antenna, then why haven't the proponents produced test results and done presentations at IEEE conferences and other technical forums?

Remember the efficiency equation: efficiency=Rrad/(Rrad+Rg+Rc)

How does the EH antenna maximize radiation resistance and minimize ground and coil/conductive resistance?

Before we all blow off this idea, remember that there are folks who live in CC&R areas that are looking for working small antennas. While they may never beat a triband beam at 100 feet, these things look like a great possibility for a back porch antenna lifted up with some suitable support. And they are simple enough to build yourself!

Meanwhile, I'm looking for a source for the variable capacitors that are used in these antennas.

Smoke and Mirrors, Articles all, BUT in the world of communications nothing beats the full length dipole antenna as the standard of measurement on an antenna range. Let's go to the range where the truth is most often extracted (minus advertising hype). Let's also apply EIA RS329 the standard of measurement for gain against the reference dipole to the subject in hand. That should not be very difficult for such a small radiator of RF.

For some strange reason, no amount of feedback, no matter how well reasoned and in harmony with the laws of physics and reality, can debunk this kind of stuff in the minds of those that long for, wish for and by golly are going to have their nothing antenna. Remember this, if it weren't for the simple phenomonon of "feedline radiation", these antennas would not perform at all. Buy some antenna books, read and study them and learn antenna theory. You'll be a lot better off.

I haven't any idea if this antenna is gobbledygook or not. Many such panacea antennas are just that and nothing more. However, I always try to keep an open mind, inasmuch as a closed mind will reject all new scientific achievements.

Those that think that, just because an antenna isn't huge, that it can?t work should review the small tuned loop antennas used by the U.S. military. Amateur versions are written up in the ARRL Antenna Handbook and are very small yet exhibit nearly 100% efficiency when compared to a full size dipole. AEA made one and so does MFJ. They worked quite well.

In the meantime, the inventors of the E H antenna, Maurice C. Hately & Fathi M. Kabbary, or their employer (U.S. Patent No. 5,155,495), sure thought enough of this invention to spend some bucks on a patent attorney and filing fees.

I know that many patents aren?t worth the paper they?re written on. But at least reading this one will give you much more insight into this antenna than you probably have now. Take a look. It's on the WEB at the U.S. Patent and Trademark Office.

Maybe after some study, we?ll have some better, educated views of this work.

Folks,

I am not a physicist or even an electrical engineer. But I am open-minded enough to NOT go disparaging the EH theory or design until I've tried it myself. I've seen several articles and web sites publishing results of experiments. Many of those results are favorable. For me to poo-poo it would be tantamount to me calling those hams, who I know nothing good or bad about, liars.

Consider:

Until Copernicus, the world thought the Earth was the center of the entire universe, and to openly state otherwise was a severe blaspheme,

Until Columbus, the earth was thought to be flat (good for propagation, BAD for sailing!),

Until Yager, the sound barrier was just that-- a barrier.

Until Armstrong, et al, few really thought that there'd ever be a man on the moon (and probably some of the naysayers still think that all took place on a Hollywood soundstage).

My challenge to the ham community that would write this idea off is this: build one yourself, per the directions on any of the published websites. They aren't expensive, they don't take any serious skill or expensive tools. The require a little patience to tune and fine-tune, but once it resonates, you can try it out head-to-head with any antenna you would otherwise use.

I intend to put my money where my mouth is and build one. I might find I've wasted my time, then I will take my "I-told-you-so's" like a man. But then again, there are those that think of ham radio in general as one big waste of time! After all, isn't ham radio chock-full of people that experiment? Maybe the EH is a better mousetrap.

Well...
In 1980, didn't the idea of CPU speeds in the range of Gigahertz seem Far Out? If you would have told me then, that in 20 years, children will be burning their own CDs, not only I, but likely most of you would be saying, "...burning, as in, on fire- what? You mean riots, our children will be burning our cities?"

Or something similar.

I mean, my rig uses a PTO- how long has that been completely OUT.

How long ago did the first Trans-Oceanic flight occur?

When did the first human reach outer space?

I don't know the answers...

I heard rumors, that Nikolai Tesla had some very Far Out ideas, probably landing him into a lot of hot water, because if they worked, the power structure of civilization might have crumbled.

Sure, I'm a skeptic, and have been known by a handful of people to be intensely cynical from time to time.
Yeah... antenna theory then and now is basically still the same, based upon the Laws of Physics as they are currently known and taught.

Remember when Cell Phones were relatively gigantic, with the telescoping whips, ha!
Remember when it was the big status symbol, and now, they are common-place. I know a few people who HAVE NO LANDLINE, but they have a cell phone.

Now if you want it bad enough, you can surf via some cell phones.
Recall when surfing was all about beaches, waves, and hydrodynamic low-drag boards. The scent of coconut suntan oil...

Place the latest Notebook (remember when they were called Lap Tops, now they are called NOTE BOOKS), set the latest Notebook next to a TRS 80, Commadore 64, PETs, audio cassette tape drives...what ever happened to ZIP drives, was that a FLASH IN THE PAN or what? Rendered completely useless by ever faster, higher capacity hard-drives, and now we're at Read/Write CD drives.

I am skeptical, but willing to admit, that new discoveries are probable, and that science/research is in bed with industry- and so the struggle for power is the same as it ever was.

I for one would be very sad to see towers and the precise, gorgeous, metalic structures that adorn them become obsolete before I ever get the chance to have one such sculpture myself.

I'm keeping an Open Mind- it's all I can do in my ignorance. I would imagine, that the developers of such a "crazy" far out paradigm, may very well have a fairly in depth understanding and grasp- of currently known and widely accepted, field-proven antenna design theory.

And it so happens, that I derive some small amount of twisted pleasure, when what should not work, performs in ways that defy conventionally accepted theory. It just tickles me pink.

Wouldn't it be great for the notion of Super Gain to be true, for the Hex Beam to actually work even if most hams don't completely understand precisely why, and for more research on all of that to be conducted.

Wouldn't it be great for the Carolina Windom to actually work as well as the makers claim- for the espoused modeled radiation patterns to actually be- a fairly accurate proximity of their true performance. For me it would, since an OCF dipole is all I have! ha.

I am aware that it seems, most antenna advancements work within the realms of conventionally accepted scientifically proven theory. Motor driven variable length elements, yielding wide range continuous optimized multiband coverage- one 3 element Yagi-Uda can practically do the job of at least 3, 3 element mono-banders. That is very cool. What next, remote controlled variable boom length? It would be virtually impossible to argue that in theory it does not work as claimed. Literally revolutionary, (motors inside each element turning). And at the same time NOT- (Only having to rotate the array a maximum of 180 degrees for 360 degree coverage is at best, non revolutionary). That is BEYOND cool, and simply- awsome.

It is often human nature to be skeptical, even zealously critical, of new and crazy-preposterous ideas.

It means having to learn more and for some people like me, it will take years to attain a solid grasp of current complex antenna theory- and then along comes some new fangled completely different yet apparently true theory- back to square one- and those that make these discoveries likely will be not so generous in the sharing of any such knowledge. After all they will have earned it the hardest way, having endured the pressure of nay saying antenna theory parias and skeptics at every turn... and it has to be tough, having formulated theory and devised the tests to prove or disprove the theory- what if they theory is proven wrong? If proven right? There'll be much profit to gain with such knowledge.

Human nature will never stop delving, never stop trying to improve upon that which is already the ultimate. Some people are compelled to keep dreaming, and the quest for a better mouse trap will never end...and I'll bet, that when someone has created the most perfect mouse trap beyong compare, it will be a matter of time before it is once again, improved- beyond compare.

Speaking of Surfing, how about that "new" Cheryl Crow video. I'm talking about that VW Van, and the pretty waterfall... and the *acoustic* guitar, and the *lyrics* are okay, too ;)

Cheers.

WO5I hit the nail on the head... While I too am very skeptical of this antenna design I won't rule it out until I've tried it. (For those moaning about there being a link to sell these antennas on their sites, does this antenna look that hard to build???) It might be a fun project and would make for a great traveling antenna. It certainly wouldn't be hard or expensive to build! Anyway, as Amateur Radio operators we MUST try to experiment and be able to look at different (and sometimes radical) new ideas, even on old tried and proven concepts. And what if this antenna design does help out those in CC&R neighborhoods, even if it doesn't work like a yagi? Hey we need those guys on the air too!

I think that in the interest of furthering the radio art and for scientific experimentation that we should not ever discount something before we try it. After all, what if Marconi had listened to the scientists and so-called experts of his day? After all, radio was "useless" and would be line of sight, at best. Marconi dared to dream and was brave enough to experiment. I hope that as Amateur Radio operators that we can continue to have an open mind towards experimentation and be able to continue to further the radio art.

I did post this same article at QRZ.com a couple of months ago, and first of all it took Eham forever to put it up. The reason I wrote it was to help out fellow hams who might not know about a smaller design that will help in maybe a situation where someone can't put up a full size beam, or dipole, and and have a kilowatt like a lot of people who gripe when someone comes up with a new idea. Frankly, I am really irritated that so many come on and "diss" an idea without even having tried it. I am an RF/radio engineer with years of experience building antenna's and wouldn't put up something that was bogus. I am NOT trying to SELL anything, just SHARE AN IDEA. Those of you who are critical probably haven't even tried it. The Antenna DOES work. If a corporation or company has the money to design and produce a smaller antenna that does, like MFJ and the like, GREAT! If not, how about just sharing ideas that work without having to have a high and mighty opinion without having tried it. Check your attitude people.

Lets respect others viewpoints and WORK folks, and unless you have tried it frankly I think you should keep your critical views to yourself. Try it and put some work into and then present your results. I did. Otherwise, let those of us who are willing to experiment a little bit, build and try things and try to help others do so without the "benefit" of your not even experienced opinions. Try it, disprove it, and then present your findings. Then you will gain respect for at least having tried.

In case no-one noticed, the initial post on this topic contains clear and explicit performance claims of 1 to 1-1/2 S-units down, in comparison to his full sized antenna. This is the same general performance that I've experienced with the design shown in the picture, over the past year and a half. The controversy of the past ten years surrounding the CFA and EH antennas are founded upon claims that they perform as well as, or better than full sized antennas.

We are dealing with a design here that can be used for restricted space situations with the expected reduced performance. Nobody has come onto this thread making any wild claims that defy the laws of physics, or the basic math for antenna design that was worked out a century ago. That Kabbary of "CFA" and Ted Hart of "EH" have been working on commercial applications all this time really has very little to do with the application of this compact, reduced performance alternative for ham radio applications.

This is a ground level vertical design that can be experimented with to achieve low angles of radiation. The longer the cylinders are, the lower the angle of radiation (to a point). Even lower angles of radiation can be achieved by using plates that are shaped like inverted cones, or a cone-disk arrangement, all of which is described in detail for practical construction on Jack Arnold's website at:

http://www.qsl.net/w0kph/

The "catch" with these antennas is that with lower angles of radiation, some claims might ring true about performance exceeding that of a single element full sized antenna, but most hams will find performance running down by 1 to 2 S-units in comparison to any full sized antennas they have at the same location. In many experiments I've done, however, I've gotten "hot" angles on the short, fat dipoles that produce better Rx and Tx performance working DX stations out at that favorable distance for the angle. This is a VERY interesting antenna design in this respect, and it bears scrutiny and investigation by those who would actually experiment with them.

And yes, there ARE some perplexing phenomena that can be produced when using these antennas. They are intriguing, and lead me to suspect that there are things going on with these designs that have yet to be adequately explained. Of course, if you never experiment with these things to any significant degree, you'll never get to that head scratching point, and you'll never have a chance to find out what I'm referring to.

First, the insulting and ill-tempered remarks above are disgusting. Why are such people so angry that they must sit around and await any opportunity to lash out with blind criticisim. I hope that these poor representitives of the Ham community are in a very small minority.

I have not built one of these antennas but I do have restrictions and have read the info on the associated web sites. Now that someone has "independently" constructed one I will try it. What harm can it do? Perhaps that is the question the above "personalities" should ponder as they sit in their dark little rooms doing whatever people like that do in private.

I will take a shot at the 20 meter version and see how it compares to my Gap Challenger vertical dipole. This is a fair comparison due to efficiency and angle of radiation. By the way, GAP has a similar multiband unit for over $400 for sale. I have yet to hear about any real-world results on this unit. It uses a flat plate with a metal box about a foot above it supported on an insulator. From articles in Antenna-X the tuning unit is the critical element.

Being very interested in all types of antennas I went out and built an EH antenna. Darn thing was so small and cute. I put it outside and compared it to my triband yagi...probably not a fair comparison. The EH while attractive and fun, did not seem to hear very well. Yeah, I got a good match, and my family made all sorts of funny remarks about my magic wand, but it worked horribly. I don't mean bad, I mean horribly. Maybe I did something wrong --as some might like to point out. And maybe I did. But it took me about 5 minutes to realize, my EH didn't work a darn. Now if someone is interested in small antennas that really work, I would strongly suggest building a magnetic loop antenna. My 80 meter 12x12 2 inch thick mag loop works great! and for the size you can't beat it on 80. Sure, you could build a smaller one if you want. I highly recommend this antenna and you don't have to re-write physics in the process. Please email me if you would like more info.

Flat earth? Closed minds? Unreceptive to new ideas? Since when did inefficient antennas become a new idea, warrenting much experimentation?
In free space, a theoretical point source of electromagnetic radiation is called an isotropic antenna. It is the point of reference we use to understand the 1/4 wavelength and 1/2 wavelength antennas, also in free space. The quarterwave displays a "gain" of about 1 db over this isotropic reference and the halfwave displays a "gain" of about 2.14 db. These can be turned around to state that an isotropic antenna has negative gain of 2.14 db over a half-wave antenna and negative 1 db over a quarterwave. Bring both of these antennas into close proximity to the earth and you have gain over them in free space, because of ground reflections. These are the real world reference standards by which we understand more complex antennas. 1 to 1-1/2 S unit down equates to about 50-90 % power loss. Why would you generate expensive r.f. energy and then be content to throw away 50-90% of it? Wouldn't it be better to generate less of it and radiate it more efficiently?
I have lived in many places as an adult and I have experimented with many antennas. A

common thread thru it all is that when you seriously shorten an antenna, you seriously diminish its performance. I have lived in beehives, townhouses, duplexes, mobile homes, single family dwellings, with and without antenna restrictions. I have used my share of clandestine antennas and I have never seen a circumstance where I couldn't erect outside antennas. All it takes is imagination and willpower. Any are to be preferred over any of these newfangled miracle antennas that promise much and deliver much less. Do what you please. I'll continue to use real antennas that deliver real performance.

It's OK, Roy. Nobody, least of all ME, is asking you to take your proven antenna to the dump in favor of something untried or inferior.

My point, and that of several others on this thread so far, is to say "why not?" to the idea of EH. I'm not encumbered by a vast knowledge of antenna theory which prevents me from hoping that something like this would work. I read the article in World Radio, and all the negative comments regarding the antenna, and am unarmed to argue any of the theoritical points. The EH could very well end up being the "cold fusion" of antennas.

However, I've also read some good comments and favorable test results and think that the EH antenna is worth a weekend's worth of my time to tinker with. Even if the thing won't radiate beyond my back yard, I'll get to sharpen some rusty skills at forming aluminum foil, winding coils of wire, cutting PVC pipe or cardboard tube -- skills that will undoubtedly bail me out of some unforeseen jam like McGyver with a magnifying glass.

This argument, or friendly ham-like discussion, is akin to arguing the merits of of QRO vs. QRP. Nobody will dispute that the 1.5KW and stacked monobanders will be heard much clearer through a pile up than an FT-817 and telescoping whip, but try stuffing your Alpha amp and tower into your backpack!

I, too, have found somewhat clever ways to radiate in adverse housing conditions. My current solution is to thumb my nose at the CC&R and ground-mount a very low-footprint multi-band vertical, hoping any neighbors that might care about such things will assume it's a deep sea fishing pole (actually had one neighbor THINK THAT! HI HI).

The EH is just another option in the realm of possibility. Let beauty be in the eye of the beholder.

I think it's important to realize you can work QRP using only an ordinary lightbulb as an antenna. And people regularly load up metal guttering with fair results. Sometimes they can work stations using dummy loads for antennas.

We would like to think antennas are wonderfully complex instruments...fact is, you can radiate a workable signal with darn near anything.

This antenna is probably a perfect example.

They used to have a lot of info at www.antennex.com...I thought the so-called "tests" in Egypt were a failure?

!!! LISTEN UP SKEPTICS !!!

Please stop making fools of yourselves! If you haven't tried it you have NO BASIS for saying anything!

We made one! I used it! it works!

I am an electrical engineer. I have been one since 1982.

These EH antennas in fact:
1. ... are not "getting something for nothing",

2. they are not "changing the laws of physics in order to make something better than it is",

3. they agree completely with the law of physics that tells us how to get radiation, and for those that have taken the time to read the relevant website, this is called the "Poynting Theorem". This antenna is simple a DIFFERENT method to work this "law of physics".

4. They WORK! I know because I used one!

I sent the article to a friend who wanted to make one, he had a friend of his duplicate the 20 meter version that was detailed on the web site. He used it and then I put it up in place on the roof.

Simply put, I worked the world on it! I live in Hollywood Calif.

From John in South Africa, a 5-7 ... on the LONG path... a FM5 in Martinique, VK's ZL's ZK1, you name it and I only had it for 3 days!

So! Read the web sites! These antennas are not using feedline rariation, they are genuine rariators using a different method to create the crossed EM field and as a result they do not need the "linear" distance used by a diplole!

These antennas just do it DIFFERENTLY!

Yea, i get upset by the "ignorant" who speak up with no basis from which to do so. In the place of facts you put baseless opinion, and in the place of knowledge you put "authority". You are all only making fools of yourselves and those of us who take the time to "find out for ourselves" are the ones who gain real knowledge!

We were curious so we built one and we found that it works! Simple. We didn't know until we tried... but we also didn't try to slam it until we KNEW something about which we wanted to speak!

I would have posted a few photos but you can already see them when you go read the web site referenced! Ours looked just like theirs do. We used copper plate wrapped around PVC cylinder. Total length.. just like on the website! http://www.qsl.net/w0kph/

This is the link that describes the "full network" verion that our friend built. http://www.qsl.net/w0kph/fullnet.html

This subject is always one that elicits contentious debate regarding claims made by commercial interests. It also brings out a fair number of those who are not only knowledgable and technically savvy who have investigated one or more of these designs, but also those who have blindly stumbled onto them and been quite excited about what they ended

up with.

Anyone who is serious about efficient antennas will have issues with the two cylinder plus coil design, however, because it really isn't a very good antenna. But compared to NO antenna this is one of the more intriguing designs around because it's small enough to be used indoors.

I, for one, cannot operate a 75m loop in my basement and make contact with anyone, near or far. I can, however, operate a two cylinder plus coil antenna for 75m in my basement and maintain contact with everyone I've tried this with, when first making contact with my outdoor inverted Vee (and vice-versa). I even got a qsl e-mail from an SWL 500 miles away who heard me making a test one night on 75m AM. Admittedly, my effective radiated power is a tenth of what it was on the outside antenna, but I have to say that if I was restricted to an apartment, this would be my antenna.

Like I pointed out in my last post, nobody's making any wild claims about this design, and nobody will ever dispute that a monoband directive array is better. What's nice about this design is you can make it sloppily and still get on the air, where otherwise you might not be able to get on the air at all.

I'm open-minded, but not so open-minded that my brain has fallen out.

1. My dummy load has a 1.1:1 SWR on 20-m. It doesn't radiate very well.

2. At 6 dB/S-unit, a drop of 1-1/2 S-units represents a 90-% power loss. If the signals coming in the side of my dipole were only 9 dB above those from a small "EH" antenna, I would start checking for loose or corroded connections on the dipole.

The current in a wire in an H-field is proportional to the strength of field times the length of the wire. Use a shorter wire, get a smaller signal. The potential on a conductive surface in an E-field is proportional to the strength of the field times the size of the surface. Use a smaller area, get a smaller signal.

In using wire length as a linear indicator of signal capture/radiation efficiency (presumed law of physics in previous post), how do you account for the fact that a tuned magnetic loop antenna, at 8.5 Ft. in circumference, is only down 1.0 dB below a "large antenna" for the same band? Reference the ARRL Antenna Handbook, 16th edition, page 5-13, loop design No. 5.

Good wishes to all in hopes we all learn here.

I don't have a copy of the reference which W3KWS cites, but please allow me to make some further comments. The "mechanics" of wave propagation are well known and have been rigorously descirbed for about 150 years now. Most electrical engineering students take a

course in Fields & Waves during their junior or senior year. In that course they learn that small radiators approximate a point source; such antennas have omnidirectional patterns and radiate equally poorly in all directions. Large radiators are more efficient, but are also more directive. For example, a half-wave dipole works well to the sides, but is deaf and dumb off the ends. Extremely large radiators generally do not work well because of phasing problems with the signals coming from different points on the antenna.

Note that a small antenna that has an efficiency many dB lower than a dipole may hear a signal coming from a bearing off the end of the dipole better than the larger antenna.

As an analogy, consider a set of loudspeakers. It is possible to construct two different loudspeakers systems which have the same low frequency cutoff using different size drivers and enclosures. Let's say we want a 20-Hz low end cutoff, and we build one system with a 38-cm (15-in) driver in a 600-l (21 cu ft) enclosure. The system efficiency will be roughly 1 %. If we build the other system with a 11-cm (4-1/2-in) driver in a 30-l (1.1 cu ft) box, the system efficiency will be around 0.05 %. At low frequencies we'll be able to get the same sound level out of the second system only if we use 20X the amplifier power. However, the smaller system will do a better job of reproducing signals above 1-kHz; the bigger woofer becomes an extremely large radiator at these frequencies. This is why a proper audio system has a woofer and a tweeter (at least!).

Similarly, we shouldn't use a 2-m ground plane on 80-m or an 80-m vertical on 2-m.

HF antenna testing requires large, open spaces and calibrated test gear which most of us do not possess. Even some manufacturers of HF antennas do not have a proper antenna test range. I take all antenna performance claims with a grain of salt until I have verified that test data actually exists and was properly measured.

I live on a small city lot. I can just fit a 70-ft dipole with loading inductors on my site. Fed with ladder line, it works sorta OK on all the bands from 160 through 10. I also have an Outbacker on an Alpha-Delta stand. In some cases (depending on the bearing to the other station or signal vertical arrival angle) it works better than the dipole. But, except on the 12- and 10-m bands, it is a less efficent radiator than the dipole.

William (W3JJH),

The problem that I see with your ideas about size of an antenna relating to its efficiency is that, while size is a factor, it is not the only factor involved. Your comparison of an isotropic source to a dipole suggests that a dipole radiates more energy than the point source. The fact is that it does not. Except for heat conversion in the resistance of both antennas and assuming for the moment that there are equal or no feed line losses, both antennas radiate exactly the same amount of energy, regardless of size. The differences you describe are due to the directional nature of the dipole versus the fact that the isotropic antenna distributes its energy equally in all directions, therefore, no one direction benefits over another, as is the case with the dipole.

Regarding wire length versus antenna efficiency, I quote from my copy of the 5th edition of the Reference Data for Radio Engineers, page 25-7; ?In addition, antenna efficiencies vary from about 70 percent for a 0.15-wavelength physical height to over 95 percent for a 0.6 wavelength height. This is for a vertical, and doesn?t account for why a loop can be above 90 percent, but it does show that a very short antenna of 0.15 wavelength can still radiate with more efficiency than one would suspect from a linear formula such as you proposed in your previous post.

Make no mistake, I doubt that the EH Antenna works very well, but I know that the tuned loop does. And, it is a small antenna. In facts, it can be a small fraction of a wavelength and approach the efficiency of a dipole. This is because factors other than size are involved. If you can get a copy of any ARRL Antenna book and read about it, you will see that it is true.

Also, you no longer need an extensive antenna range to determine the value of an antenna. There are many very good computer modeling programs that produce results that are very close to what you would find on an antenna range.

Believe it or not, we only think we have a handle on physics. People are proving every day that even Einstein didn?t have it all right. THERE ARE NEW THINGS TO DISCOVER ALL THE TIME. Even the fact that a small antenna like the tuned loop can work very well compared with much larger antennas.

Whether the EH Antenna is a good one is a simple matter of analysis. I wish I had those analytical skills myself, but I don?t, so I rely on the published references of those that do have the skills. The loop has been studied for years and has been proven to work.

Maybe we can attract someone to this discussion that can do a computer model of the EH antenna and give us some real data that we can rely on.

73,

Bob

C'mon, guys. Let's not lose sight of the fact that this is a HOBBY, one that fortunately lends itself to all sorts of experimentation. What works for someone might not work for another, but if it doesn't, instead of just pooh-poohing it, try to se if you CAN make it work!
I knew a gentleman by the name of Jim Waldron. His callsign escapes me at the moment, and I'm sure he is an SK by now. He founded a company called Com-Rad Industries. He had designed and manufactured shortened antennas similar to the EH design. In fact, he designed and sold similar antennas from 160 meters up to 450. Of course we had our local "experts" that said it didn't work and all his so-called "testimonials" that he had were all hired shills to talk up his units. But I sat in his shack for about two hours and tried them myself, and the results were satisfying. I never bought one (or built one) myself, but I thought they were kind of cool and seemed to work. His company was the progenitor of a

company now known as Untenna (www.untenna.com). Apparently somebody thought the idea had merit, even though the current company specializes in commercial two-way antennas and has left the ham market.
Point is, don't get caught up in the physics of it all. If the laws of physics applied to everything literally, bumblebees couldn't fly.

Small EH Antenna

Reply (http://www.eham.net/forums/post/Articles/14665)

Mail this to a friend! (http://www.eham.net/forums/mailto/1?id=14665)

OK, I built one for 20m. (well two)Took about 2 hours including rounding up the materials and getting it tuned to 14.200. It works! No it isn't going to put Force 12 out of business, but I have limitations on where and what I can put up. I was so floored that I brought it to a club meeting to show it off.

Our club has a lot of techies but we never knock an idea until we can prove it wrong. A few members got excited and built them and they all worked. In our club we have EH antennas from 10m to 160m. AH6EZ Dick, is the big EH experimenter in our club and an engineer for Motorola who worked 47 states on 160 in one contest last year on an EH. His 160 is on the EH page of W0KPH. 10 feet tall and 16 inches in diameter and can handle over 600 watts! It works when it is 10 to 15 feet off the ground and suspended from a tree.

Until you walk in a mans shoes do not call him a liar. Build this thing and build it right and it does work. Sure it defies any old antenna theory so if you do not believe it build it "correctly" and prove it does not work, I doubted it, but now I have 3, two for 20m and one for 40m. The 40m is only 24 inches tall but works better than my mobile 40m antenna...so I am going to mount it on the back of the car and use it...has better bandwidth than my center loaded mast.

815. The Worth Of Our Lives

Yahoo group: m_a_r_s
Date: 2002-09-03 17:57:54 UTC
From: vijay motwane
Topic: 815 Message: 815

THE WORTH OF OUR LIVES

A well known speaker started off his seminar by holding up a $20.00 bill. In the room of 200, he asked, Who would like this $20 bill? Hands started going up. He said, I am going to give this $20 to one of you but first,let me do this. He proceeded to crumple the dollar bill up. He then asked,"Who still wants it?" Still the hands were up in the air. Well, he replied, What if I do this? And he dropped it on the ground and started to grind it into the floor with his shoe. He picked it up, now
crumpled and dirty.
Now who still wants it? Still the hands went into the air. My friends, we have all learned a very valuable lesson. No matter what I did to the money, you still wanted it because it did not decrease in value. It was still worth $20.
Many times in our lives, we are dropped, crumpled, and ground into the dirt by the decisions we make and the circumstances that come our way. We feel as though we are worthless. But no matter what has happened or what will happen, you will never lose your value: dirty or clean crumpled or finely creased, you are still priceless to those who love you. The worth of our lives comes not in what we do or who we know, but by WHO WE ARE.
You are special - Don't EVER forget it. If you do not pass this on, you may never know the lives it touches, the hurting hearts it speaks to, or the hope that it can bring. Count your blessings, not your problems.

Vijay,
Nice to have QSO with you tody. I was reading on QRZ.com and can I too
am a big Satriani, Vai, and VanHalen fan. I have been playing for years and
have small guitar studio here where I pretend I am Eddie VanHalen....Hi. I
don't know if you have ever spoke with W6TG, but he was Van Halens sound
engineer for years, you will see his name, Ken Deane on the back of CD.s for
the last 6 recordings they made, he works for me now and is a very good
friend.
Anyway, Big signal from you with 50 watts, incredible. One of best signals
from India I have ever heard on 15 meters. Hope to find you on again soon
and we can talk more.

820. CHINESE HUNGAMA ON HF

Yahoo group: m_a_r_s
Date: 2002-09-07 10:17:24 UTC
From: Sandip Adiwarekar
Topic: 820 Message: 820

CHINESE "ROBOT"
The Chinese robot stations are reported on various frequencies.
This is a typical USB operation with RF carrier suppressed,
notching of audio frequency from 300 to 1000Hz is clearly observed
during it's transmission, probably used to increase a possible DSP
identification.
Logged frequencies: 4480, 5700, 6840, 6860, 7090, 7770, 8025 kHz.

JAMMERS
The usual bunch of wobble, buzz, and bubble jammers from Iran, Iraq,
China, N.Korea and Cuba are a pest on a large number of frequencies:
3912, 5680, 7000, 7010, 7030, 7040, 7050, 7060, 7070, 7080, 7086, 8350,
13420, 13430, 13440, 13470, 14005, 14036, 14061, 14105, 14175, 18090
kHz.

INDONESIAN / ASIAN ILLICIT STATIONS
The suspected stations from Indonesia were also reported in August.
A popular frequency range is 14000-14125 kHz.
Mode is usually USB, but LSB has also been noted.
Frequencies: 7000, 7015, 7025, 10105, 14000, 14005, 14080, 14100,
14110, 14115, 14120, 14125 (Timor), 14230 (Timor), 18010 kHz.

CHINESE - MUSICAL - JAMMING SPECIAL
STATION DATA:
- Transmissions:
Chinese instrumental folk music.
- Special nonstop compilation.
- Loop playback from hard drive.
- Duration of 1 cycle - 1hr 00 min 00.2 sec.
- Modulation:

Camouflage jamming audio signals:
(a) Chinese instrumental folk music, computerized loop recording,
t=60 min 00.2 sec.;
(b) 1st or 2nd program of Chinese National Radio.

Jamming modulations:
(a) Programs of China National Radio in non-distorted AM mode for
long distance high power (100-500 kW) sky-wave operation.
(b) Programs of China National Radio in Narrow FM - mostly for local
(ground-wave) operation.
- Estimated transmitters used for musical jamming: 20.
- Most suitable time for reception in Europe: from 1600 to 0900 UTC.
- Chinese musical jamming is targeted at Radio Free Asia, Voice of
America, BBC, Deutsche Welle, Falun Dafa and other stations.

FREQUENCIES on which the musical jamming could be heard one or more
hours per day. AM and Narrow FM jamming networks not included in the
frequency list.
5925, 6035, 6140, 7150, 7160, 7190, 7200, 7310, 7470,
7515, 7530, 9355, 9445, 9450, 9455, 9510, 9545, 9675,

1500-1600: 7470, 11510, 11760, 11945, 13625, 13690, 15510, 17640,
17785
1600-1700: 7310, 7470, 7515, 9450, 9675, 11665, 11750, 11795,
11855, 13625, 13690, 15265, 15510, 15680, 17640
1700-1800: 7515, 9355, 9455, 9915, 11750, 11945, 11955, 12065,
13690, 15510, 15680, 17640
1800-1900: 7530, 9355, 9455, 11520, 11945, 11955, 15510, 15680,
17640
1900-2000: 9355, 9455, 9905, 9955, 11520, 11785, 11945, 13625,
13680, 15510, 15680
2000-2100: 9355, 9455, 9905, 11520, 11700, 11785, 11935, 13625,
13670, 15515, 15680
2100-2200: 5925, 9355, 9945, 11520, 11700, 11935, 13625, 13680,
15515, 15680
2200-2300: 7150, 7160, 7190, 7200, 9355, 9510, 9545, 9955, 13775,
15280, 17615
2300-0600: No monitoring data available

- Notes:
Usually between 30% and 80% of the used frequencies may be heard
in Europe at the same time. The frequency that propagated best in
Europe during July was 15680 kHz: daily from 1400 to 2200 UTC.
You may hear 1, 2 or more jamming transmitters on the same frequency
at the same time.

AND YOU THOUGHT CHINESE ARE CAUSING QRM ON 2m!!

++
//
////////////////////////////
==========

HAMS ON 5 MHZ
The frequencies that came recently available to UK radio amateurs for 5 MHz propagation experiments are 5260, 5280, 5290, 5400 and 5405 kHz. All are 3 kHz wide channels. You might find the Royal Cadets on these frequencies as well.

Clear DayMUMBAI AMATEUR RADIO SOCIETY

Dear Friends,

MARS conducted ASOC exam on 11th September 2002 at Nyan Sadhana College, Thane. Students for the Churchgate batch and Thane batch appeared simultaneously on the same day. 71 students gave their exams for Grade - I and Grade - II. Most of the students have done well in their exams and are likely to get good grades.

It was great on the part of the students to hang on with the course and not quit specially because of the Morse. (In past about 50% would quit). I sincerely hope that they will hang on to the hobby and become active HAMS once they get their tickets.

MARS conducted classes at Thane because of the keen interest shown by Mr.Satish Pradhan - VU2PDT, who also is a MP. MARS is grateful to him for providing the Class room for conducting the Ham Radio course and also motivating Thane residents to become HAMs.

I would like to thank all the MARS members for participating in teaching and assisting during this last 3 months. I would like to specially thank Mehul - VU3MBF, Kiran - VU3KPL, Sandip - VU2UGO, Zyros - VU2ZRS, Sandesh - VU2SXF, Prashant - VU2CBU, Jaiprakash - VU2JPN, Huzefa - VU2HIT,
Parin & Ivor and others for doing a wonderful job.

I also thank Mr. Milind Korde from Thane Batch for his help and wonderful support in organising and planning during the course at Thane. I am quite convinced that in future he would promote Ham Radio in Thane Dist with great enthusiasm.

MARS also thanks TARA (Thane Amateur Radio Association) for providing a superb Buffet Lunch during the full day recap session on Sunday at Thane.

I sincerely hope that the students will get their results and tickets soon and will become active hams in very near future.

Once again I thank all the people involved in the Ham Radio classes for taking out their time and offering their services without vested interest for this wonderful cause.

73
For Mumbai Amateur Radio Society
Nilesh Rathod, VU2NLF
Secretary.

Clear DayMUMBAI AMATEUR RADIO SOCIETY

Dear Friends,

The Monthly meeting for September will be held on Sunday 15th Sept 2002.

QTH : Bengalle Girls High School, Opp. USIS library, Churchgate, Mumbai at 10 am

The Agenda for the meeting is as under :-

Briefing for Communication support during Ganesh Visarjan on 20th Sept.
Preparations for JOTA on 19/20th Oct 2002.
Prospects for future Ham Radio Classes.

Members are requested to attend the meeting as we have not conducted the monthly meeting for the last 3 months because many of us were QRL with the classes.

Please note that the students of the last batch are automatically Annual members of MARS and hence they all requested to kindly attend the meeting and start participating in the Society's Ham Radio Activities.

Please also note that MARS maintains a good library with all the latest QST Magazine(including Sept 2002). kindly take the advantage and keep yourselves updated with the latest news and information. The magazines will be available at the monthly meeting.

looking forward to having an eyeball with you

73

Subject: [m_a_r_s] HAM RADIO Exams Succesful

MUMBAI AMATEUR RADIO SOCIETY

Dear Friends,

MARS conducted ASOC exam on 11th September 2002 at Nyan Sadhana College, Thane. Students for the Churchgate batch and Thane batch appeared simultaneously on the same day. 71 students gave their exams for Grade - I and Grade - II. Most of the students have done well in their exams and are likely to get good grades.

It was great on the part of the students to hang on with the course and not quit specially because of the Morse. (In past about 50% would quit). I sincerely hope that they will hang on to the hobby and become active HAMS once they get their tickets.

MARS conducted classes at Thane because of the keen interest shown by Mr.Satish Pradhan - VU2PDT, who also is a MP. MARS is grateful to him for providing the Class room for conducting the Ham Radio course and also motivating Thane residents to become HAMs.

I would like to thank all the MARS members for participating in teaching and assisting during this last 3 months. I would like to specially thank Mehul - VU3MBF, Kiran - VU3KPL, Sandip - VU2UGO, Zyros - VU2ZRS, Sandesh - VU2SXF, Prashant - VU2CBU, Jaiprakash - VU2JPN, Huzefa - VU2HIT,
Parin & Ivor and others for doing a wonderful job.

I also thank Mr. Milind Korde from Thane Batch for his help and wonderful support in organising and planning during the course at Thane. I am quite convinced that in future he would promote Ham Radio in Thane Dist with great enthusiasm.

MARS also thanks TARA (Thane Amateur Radio Association) for providing a superb Buffet Lunch during the full day recap session on Sunday at Thane.

I sincerely hope that the students will get their results and tickets soon and will become active hams in very near future.

Once again I thank all the people involved in the Ham Radio classes for taking out their time and offering their services without vested interest for this wonderful cause.

MUMBAI AMATEUR RADIO SOCIETY

Dear Friends,

The Monthly meeting for September will be held on Sunday 15th Sept 2002.

QTH : Bengalle Girls High School, Opp. USIS library, Churchgate, Mumbai at 10 am

The Agenda for the meeting is as under :-

Briefing for Communication support during Ganesh Visarjan on 20th Sept.
Preparations for JOTA on 19/20th Oct 2002.
Prospects for future Ham Radio Classes.

Members are requested to attend the meeting as we have not conducted the monthly meeting for the last 3 months because many of us were QRL with the classes.

Please note that the students of the last batch are automatically Annual members of MARS and hence they all requested to kindly attend the meeting and start participating in the Society's Ham Radio Activities.

Please also note that MARS maintains a good library with all the latest QST Magazine(including Sept 2002). kindly take the advantage and keep yourselves updated with the latest news and information. The magazines will be available at the monthly meeting.

looking forward to having an eyeball with you

observe Labor Day. ARRL HQ will reopen for business at 8 AM EDT Tuesday,
September 3. We wish all our members a safe and enjoyable holiday weekend!
============================================================

==>ARRL DIRECTOR, VICE DIRECTOR RACES SET IN FOUR DIVISIONS

ARRL members in the Atlantic and Great Lakes divisions will cast ballots
this fall in contests to pick directors, while members in the Delta and
Midwest divisions will have a choice of candidates for vice director. Six
other incumbents--including both the Director and Vice Director in the
Dakota Division--avoided challenges in the current election cycle to
choose directors and vice directors for the 2003-2005 term.

Two directors face opposition. In the Atlantic Division, incumbent
Director Bernie Fuller, N3EFN, of Saegertown, Pennsylvania, will face
Anthony Gargano, N2SS, of Sewell, New Jersey. Vice Director Bill Edgar,
N3LLR, is among those facing no opposition. In the Great Lakes Division,
Director Gary Johnston, KI4LA, of Edgewood, Kentucky, is in a three-way
race with Paul Daley, WT8S, of Canal Winchester, Ohio, and Jim Weaver,
K8JE, of Mason, Ohio. Johnston only recently took over the top spot from
George Race, WB8BGY, who, in a surprise move, resigned during the July
```

Board of Directors' meeting. Vice Director Dick Mondro, W8FQT--who was Michigan Section Manager before his appointment in the wake of Johnston's accession--is unopposed for election.

Incumbent vice directors in two divisions will compete for their seats. In the Delta Division, incumbent Henry R. Leggette, WD4Q, of Memphis, Tennessee, faces a challenge from Nicholas R. Smith, W4GKM, of Crossville, Tennessee. Delta Division Director Rick Roderick, K5UR, has no opposition. In the Midwest Division, incumbent Vice Director Bruce Frahm, K0BJ, of Colby, Kansas, has competition from Bill Wheeler, K0DEW, of Lebanon, Missouri. Midwest Division Director Wade Walstrom, W0EJ, is unopposed.

Dakota Division Director Jay Bellows, K0QB, and Vice Director Twila Greenheck, N0JPH, also face no opposition in their bids for re-election.

In the divisions where there is competition for director or vice director, ballots will go out to all ARRL members on record in the division as of September 10, 2002. Ballots will be mailed by October 1 and must be received back at ARRL Headquarters (via the ARRL's auditor) by noon on November 15, when they will be counted and the successful candidates announced. Candidates running unopposed are declared elected. New terms of office begin January 1, 2003.

==>FLORIDA MAN IMPRISONED, FINED FOR DELIBERATE INTERFERENCE

Florida Citizens Band enthusiast William "Rabbit Ears" Flippo will spend a total of 15 months in federal prison--including two months already served--and pay a $25,000 fine for jamming Amateur Radio communications and transmitting without a license. He'll also spend a year on supervised probation following his release, during which he cannot own radio gear or firearms. Flippo was convicted in federal court earlier this year on eight misdemeanor counts. The sentence is believed to be a record for convictions of this type.

"It's sent a shock wave across the Amateur Radio and CB communities in South Florida," said Ed Petzolt, K1LNC, who was among the amateurs targeted by Flippo and who testified at his trial. "The CB guys are running for cover. You can buy an illegal CB amplifier pretty cheap right now," he quipped. Hams were surprised by the severity of the sentence.

Federal District Court Judge Daniel T.K. Hurley imposed the sentence August 29 on Flippo, of Jupiter. He had been found guilty June 19 of four counts of operating without a license and four counts of deliberate and malicious interference. Flippo has remained in custody since the guilty verdict and underwent a psychiatric evaluation prior to sentencing. The judge also said he wants a full financial disclosure from Flippo, who may face other legal actions unrelated to his radio operation convictions.

At the sentencing, Flippo reportedly wept, said he'd turned over a new leaf and claimed he was sole support for his wife and two daughters. None of his family members was in the courtroom for the sentencing, however.

The judge was not persuaded, telling Flippo, 60, that he was old enough to have considered the consequences of his actions. Hurley also alleged numerous incidents of perjury during the course of Flippo's testimony during his June trial, which ran six-and-one-half days. The jury took about a half hour to determine that he was guilty on all counts.

According to trial testimony, Flippo primarily had targeted members of the Jupiter-Tequesta Repeater Group for jamming and regularly interfered with amateur operations, especially on 10 and 2 meters, over an approximately three-year period. Following up on the amateurs' complaints, personnel from the FCC's Tampa District Office visited the Jupiter area at least twice in 1999 and reported tracking the offending signals to Flippo's residence.

Flippo had faced a maximum of eight years in prison--one year on each count--and up to $80,000 in fines. Available opinions were mixed on whether the sentence Hurley imposed was appropriate. Petzolt, who assisted the FCC in gathering evidence and, at one point, had his car rammed by Flippo's vehicle, said he felt Flippo should have received at least three years.

"I thought it was a slap on the wrist," said Petzolt, the 1999 ARRL International Humanitarian Award winner who also testified at the trial. John Criteser Jr, KC4JLY, agreed. "I think he should have gotten more--at least five years," Criteser said outside the courthouse. Other amateurs who attended the sentencing session, including Jupiter-Tequesta club member Bert Moreschi, AG4BV, were satisfied with the penalty, however.

Last year, Flippo was convicted in state court of criminal mischief--also a misdemeanor--after ramming Petzolt's vehicle. He was sentenced to a year's probation and ordered him to dispose of his radio equipment. A ban on possessing radio gear also was a condition of his federal bond, which Hurley revoked during the trial.

Federal authorities arrested Flippo in July 2000. The criminal charges of which he now stands convicted covered violations allegedly committed between June 1999 and April of 2000. The defendant already faces a $20,000 fine levied in 1999 for unlicensed operation, willful and malicious interference to Amateur Radio communications, and failure to let the FCC inspect his radio equipment.

Hurley ordered Flippo immediately back into custody to start serving his sentence. Flippo reportedly was led into and out of the courtroom in shackles and leg irons.

==>POP STAR LANCE BASS PASSES TECHNICIAN TEST AS PART OF HIS QUEST FOR SPACE

Lance Bass of the pop singing group 'N Sync is still hoping to travel to the International Space Station in late October through Russia's "space tourist" program. Bass passed his Technician license examination August 30 at an ARRL-VEC test session, and, if all arrangements can be worked out, ham radio could be a part of his space visit. He has not yet been issued a

call sign.

In the US this week for training with NASA, Bass worked with the Amateur Radio on the International Space Station (ARISS) volunteer team, which included Nick Lance, KC5KBO, ARISS Chairman Frank Bauer, KA3HDO, and Carolynn Conley, KD5JSO--the Amateur Radio integration manager at the Johnson Space Center (JSC) in Houston.

"I will be staying in contact the whole time I'm up there," Bass said during a NASA-hosted Web chat with students across the US August 29. "I'm getting my ham license this week--that's one of my goals this week--so I can talk to different schools around the world via ham radio. That'll be a lot of fun." An audience of youngsters ranging in age from 9 to 12 from Pearl Hall Elementary School, Pasadena, Texas, also joined Bass in the Johnson Space Center studio to ask questions face-to-face.

Bauer said Bass knows the rules and regulations and that the ARISS team also supplied training on the ARISS hardware and operations from space. "We gave him some sessions where he could listen to typical QSOs on orbit and school group contacts from the ground; he is now well versed on what to expect." Bass also received training with the ham radio hardware during his Russian training stay.

At this point, however, nothing is finalized to ensure that Bass will get on the air from the NA1SS/RS0ISS ham station on the ISS. Daily discussions continue between members of the ARISS team and Celebrity Mission LLC--the group handling Bass's affairs. If all goes well, the stage may be set for Bass to communicate with the Amateur Radio community from space this fall. Bass would be part of a three-person Soyuz "taxi crew" that will blast off from Kazakhstan on October 28.

At 23, Bass would be the youngest person ever to travel into space. A remaining potential roadblock still appears to be completion of financial arrangements with Russia, which has claimed that it had not received a promised payment from Bass's organization. At one point, Russia even halted Bass's training, but he was subsequently permitted to resume. The round-trip ticket price has been generally estimated to be in the vicinity of $20 million, but all sides are keeping mum about the exact cost.

For more information about the International Space Station, the Expedition 5 crew and the taxi crew of which Bass will be a member, visit the NASA Human Spaceflight Web site <http://spaceflight.nasa.gov>.

==>POWER LINE INTERFERENCE WORKSHOP A HIT

A two-day workshop at ARRL Headquarters on power-line interference turned out to be a great success on more than one level. The August 22-23 session, conducted by Mike Martin, K3RFI, of RFI Services of Maryland, not only attracted a better-than-average turnout, but participants were able to track down at least some of the sources of power line noise affecting W1AW. Most of those attending the session were involved with locating and dealing with power-line related interference issues.

"We're starting to get their attention," ARRL Lab Supervisor Ed Hare, W1RFI, said of the power companies. By hosting the workshop, the ARRL hoped to assist hams as well as the power companies to combat this longstanding problem. The course included hands-on field work and specific instruction on finding and fixing the noises that can plague Amateur Radio operators and other radio spectrum users. Participants went away with techniques on how to quickly determine which specific system hardware is the source of the noise.

The FCC recently began taking a harder line toward alleged Part 15 violations involving power line interference to Amateur Radio operators. Martin's workshops are aimed at helping anyone involved with the electric power industry to find sources of power line noise--occasionally an ongoing and vexing concern for hams--and to help them to understand their obligations under FCC rules.

Among the 20 attendees were FCC Special Counsel for Enforcement Riley Hollingsworth, two members of the US armed forces, a communications specialist, several members of the ARRL Headquarters staff and several power company employees.

"The RFI workshop was excellent and led to a much better rapport between the power companies and amateurs," Hollingsworth remarked. "Since RFI problems are often an early warning of an outage or danger to persons on the ground, it is important that the power companies respond. Power line interference can degrade the Amateur Service and must be dealt with."

The first day's class discussed the causes of power-line noise, some of the less well-known things to watch for and noise-locating techniques. On the second day, the whole group took to the field for some practical experience. Loading themselves into a fully equipped noise-locating van, the students went out to see if they could find the sources of noise that has been causing interference at W1AW for more than three years. It took the group less than an hour to find the two noise sources. Now that they have been identified, local power supplier Northeast Utilities will be notified and asked to correct the problem.

ARRL Electromagnetic Compatibility Specialist John Phillips, K2QAI, said participants' comments were uniformly positive. "It is our hope that as more people become aware of how easy it is to locate and fix most sources of power-line noise," Phillips said, "more power companies will take responsibility for solving the problems expeditiously."

==>AMATEURS' NON-STOP FIRE DUTY DOES SECTION MANAGER PROUD

Amateur Radio Emergency Service members in the San Diego, California, area spent two weeks assisting the American Red Cross and the California Division of Forestry during the so-called Pines Fire. ARRL San Diego Section Manager Kent Tiburski, K6FQ, says dozens of ARES members responded July 30 to a full callout. The fire started a day earlier after the blade of an Army National Guard helicopter on drug patrol struck the ground near Volcan Mountain. Hundreds of residents had to be evacuated as the fast-moving wildfire some 60 miles northeast of San Diego threatened

homes.

"Amateur Radio played a major role in the safe evacuation of residents from their homes to Red Cross-maintained shelters," Tiburski said. "Hams manned several shelters including one at Julian High School." The high school served as the primary shelter as well as the California Division of Forestry's field operations center. ARES members also were detailed to other shelters in Shelter Valley and Ramona. Hams later assisted the Red Cross in damage assessment.

"The fire early on had destroyed power and telephone lines, leaving the east county towns without telephone and cellular service," Tiburski said. "Hams utilized numerous repeaters during the fire to cover the rugged back country of San Diego County." Radio operators quickly set up vital communication links between the Red Cross emergency operations center and workers in the field, earning later praise from Red Cross officials.

"As the fire lines quickly changed, radio operators stayed one step ahead of the fire, radioing information necessary to assure an appropriate Red Cross disaster response," said Red Cross Public Information Officer Jay Esper. "Without the quality service from the ARES radio operators, the American Red Cross could not maintain the high quality of service to its clients."

Tiburski had special praise to San Diego County and the county's Radio Amateur Civil Emergency Service (RACES) team for loaning its new county-wide repeater system. He said the more than 40 ARES members, some working multiple shifts round-the-clock, passed hundreds of messages without missing a beat.

Doug Morris, W6DUG, who assisted at the Julian shelter, said he was "overwhelmed" at how dependent the community was upon the services of Amateur Radio. "It seemed many hams who had never been involved in this type of operation volunteered and found themselves badly needed," he said in a message to Tiburski.

For his part, Tiburski said he was gratified and pleased at how well the ARES members responded. "Their selfless devotion to providing emergency communications in time of need reflected great credit upon ARES and the Amateur Radio Service," Tiburski said. "I'm proud to be their Section Manager!"

The Pines Fire burned over some 62,000 acres and destroyed three dozen homes and another 100 or so other structures. Tiburski said it was the largest and longest-burning fire in San Diego County to require ARES support.

==>FINAL TWO HAM ANTENNAS INSTALLED ABOARD SPACE STATION

The last two Amateur Radio on the International Space Station (ARISS) antennas were installed this week during a space walk. The installation wraps up work that began last January when the first two of the four

Italian-designed antennas were attached to the ISS exterior. During the second of two space walks this month, two members of the Expedition 5 crew attached essentially identical VHF-UHF flexible-tape antennas to the ISS Service Module on August 26. The space walk--or EVA (extra-vehicular activity)--had been postponed from August 23.

Expedition 5 Flight Engineer Sergei Treschev, RZ3FU, joined Crew Commander Valery Korzun, RZ3FK, during the nearly 10-hour-long space walk. In addition to installing the new ham radio antennas, the pair prepared the station for upcoming space walks and worked with Russian and Japanese experiments on the station's exterior.

Installation of the new ARISS antennas on the Zvezda Service Module--the crew's living quarters--makes possible two separate ham stations aboard the orbiting outpost--one for VHF operation, the other for UHF (70 cm). Similar flexible-tape antennas for VHF-UHF and for HF were installed during January space walks by the Expedition 4 crew, although there is not yet any HF gear aboard the ISS.

The newest two VHF-UHF flexible tape antennas--designated WA1 and WA2--were installed along the perimeter of the aft end of the Zvezda Service Module, near the Soyuz docking port.

ARISS is an international project sponsored jointly by ARRL, NASA and AMSAT. A paper entitled "2001: an Amateur Radio Space Odyssey on the International Space Station," which details the development of ARISS and discusses the four new ARISS antennas, is available via the ARISS Web site <http://ariss.gsfc.nasa.gov/EVAs/amsat01.pdf>.

==>SOLAR UPDATE

Solar scholar Tad "Tequila Sunrise" Cook, K7VVV, Seattle, Washington, reports: Last week's rise in sunspot count couldn't last forever, and the numbers this week show a drop. Average daily sunspot count for the reporting period, August 22-28, declined 104 points, and solar flux was down by nearly 38 points when compared to the previous week.

The autumnal equinox is just a few weeks away. This is a great time for HF DX, as we pass from the summer season. Sunspot 87 is currently passing through an area where it is squarely aimed at earth and poses a threat for developing powerful X-class solar flares. The current prediction is for moderate to unsettled geomagnetic activity over the next few days, barring any upset from sunspot 87. Solar flux is expected to decline over the next few days with Friday through Monday values around 170, 165, 155, and 150. Solar flux is expected to reach a near term minimum near 125 around September 7, and then bounce back quickly.

Sunspot numbers for August 15 through 21 were 281, 247, 270, 308, 247, 209 and 238, with a mean of 257.1. The 10.7-cm flux was 210.3, 213.8, 226.7, 241, 237, 227.5 and 219.9, with a mean of 225.2. Estimated planetary A indices were 19, 17, 13, 18, 27, 23 and 41, with a mean of 22.6.

Sunspot numbers for August 22 through 28 were 205, 207, 199, 136, 105, 133 and 87, with a mean of 153.1. The 10.7-cm flux was 220.1, 224.5, 195.6, 178.6, 168.6, 161.4, and 163.2, with a mean of 187.4. Estimated planetary A indices were 11, 11, 11, 9, 18, 15 and 10, with a mean of 12.1.

==>IN BRIEF:

* This weekend on the radio: The YO DX HF Contest, the Michigan QRP Labor Day CW Sprint are the weekend of August 31-September 1. JUST AHEAD: The Michigan QRP Labor Day CW Sprint is September 2-3. The North American Sprint (CW), the All Asian DX Contest (SSB), the IARU Region 1 Field Day (SSB), the DARC 10-Meter Digital Contest and the QRP ARCI End of Summer PSK31 Sprint are the weekend of September 7-8. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* Field Day 2002 received logs posted: The ARRL Contest Branch has announced that the logs submitted for Field Day 2002 have been posted on the Logs Received page <http://www.arrl.org/contests/claimed/> on the ARRL Web site. Click on "2002 ARRL Field Day" under "Other Reports." Contact the ARRL Contest Branch (n1nd@... or 860-594-0232) if you spot errors or if your entry is missing. The Contest Soapbox page <http://www.arrl.org/contests/soapbox> includes interesting photographs and stories from many Field Day groups. Feel free to share your group's photos and stories.

* ARRL Computer System Upgrade to Cause Some Disruptions: A major computer system conversion at ARRL Headquarters will allow the League to better serve our members, but there will be some delays in service as we transition from the old system to the new one. Any membership applications, renewals or changes to membership records--such as address or call sign--that arrived after 5 PM EDT August 28 will not be processed until the new system is in operation next week. Club and examination information also will not be updated. In the meantime, all normal lookup features will remain available via the ARRL Web site, but the information will be as of 5 PM EDT on August 28. ARRL product and publication orders placed during the conversion period will be delayed by a few days. E-mail and FCC call sign lookup information will not be affected by the changeover. "Please bear with us as we work our way through the conversion," said ARRL Chief Operating Officer Mark Wilson, K1RO. "The staff is a little nervous about flipping the switch but excited about seeing all of the work and preparation that went into developing the new system turn into reality." ARRL anticipates that regular Web processing will resume by Friday, September 6--if not sooner. We apologize for any inconvenience during this transitional period. Further information on the changeover will be posted as it's available.

* ARRL contest certificate redesign causes delivery delay: The ARRL Contest Branch is retiring its landscape-format (horizontal) certificates after many years of service and replacing them with redesigned portrait-style (vertical) certificates. The changeover has meant delivery

delays, however. "To those awaiting certificates for several ARRL-sponsored operating events, please stand by," says ARRL Contest Branch Manager Dan Henderson, N1ND. "The basic artwork has been approved, and the Graphics Department is hard at work tweaking the final design and layout for the certificates." Henderson says he anticipates having the new certificates on hand, ready for labeling and mailing by the Contest Branch by mid-October at the latest. The new-style certificates will be used for all ARRL-sponsored HF and international events starting with the certificates for the 2001 ARRL 160 Meter Contest. New VHF/UHF certificates will debut with the 2002 June VHF QSO party. New ARRL November Sweepstakes certificates will be issued for the first time for the 2002 events. In addition to the new certificates, ARRL is replacing the old-style ARRL June VHF QSO Party plaque with a more modern design. "The artwork was selected from dozens of photos submitted by members and will feature a spectacular mountain sunrise from a rover's perspective," Henderson explained. The new June plaques also are expected to be available by mid-fall.

* 2002 ARRL/TAPR Digital Communications Conference set: The 21st ARRL and TAPR Digital Communications Conference will be held in Denver, Colorado, September 13-15. "Our goal is to make everyone aware of the DCC and make it the best amateur technical conference," said TAPR's Steve Bible, N7HPR. The annual gathering provides an international forum for radio amateurs involved in digital communication, networking, and related technologies to meet, publish their work, and present new ideas and techniques for discussion. At this year's DCC there will be topics and demonstrations on Linux, Software Defined Radio, digital voice, IEEE 802.11 "Wi-Fi" protocol, and precision timing, just to name a few. Software Defined Radio will be the focus of the Sunday Seminar by Matt Ettus, N2MJI. The Saturday night banquet speaker is Bruce Perens, K6BP--a well-known Linux advocate and radio amateur. The DCC is for digitally oriented amateurs of all experience levels. Information about the conference and registration details also are on the TAPR site <http://www.tapr.org/tapr/dcc/>. Copies of the Digital Communications Conference Proceedings will be available from ARRL for $20 via the ARRL Web catalog <http://www.arrl.org/catalog/>.

Subject: [m_a_r_s] monthly meeting & Ganesh visarjan briefing

MUMBAI AMATEUR RADIO SOCIETY

Dear Friends,

The Monthly meeting for September will be held on Sunday 15th Sept 2002.

QTH : Bengalle Girls High School, Opp. USIS library, Churchgate, Mumbai at 10 am

The Agenda for the meeting is as under :-

Briefing for Communication support during Ganesh Visarjan on 20th Sept.
Preparations for JOTA on 19/20th Oct 2002.
Prospects for future Ham Radio Classes.

Members are requested to attend the meeting as we have not conducted the monthly meeting for the last 3 months because many of us were QRL with the classes.

Please note that the students of the last batch are automatically Annual members of MARS and hence they all requested to kindly attend the meeting and start participating in the Society's Ham Radio Activities.

Please also note that MARS maintains a good library with all the latest QST Magazine(including Sept 2002). kindly take the advantage and keep yourselves updated with the latest news and information. The magazines will be available at the monthly meeting.

looking forward to having an eyeball with you

Clear DayMUMBAI AMATEUR RADIO SOCIETY

Dear Friends,

The Times of India has published an article in TOI 23th September 2002 on page 2 about Ganesh Visarjan.

They have also mailed me a soft copy as listed below:-

Modak moments at Chowpatty

By Nina Martyris

TIMES NEWS NETWORK

Mumbai: On Visarjan night, as they have been doing for the past five years, Mumbai's hamsters got crackling. Into the dynamic homecoming scene of Mumbai's most popular deity, the wireless crew infused a much-needed measure of static.

Cocooned from the din behind a spongy set of headphones and looking more professional than the police, the Mumbai Amateur Radio Society, demonstrated that their crackle-and-static hobby could be used effectively for the greater common good. Thanks to their wireless grapevine, lost children were found, more nouveau forms of communication technology as techies-come-lately. In an era where internet and mobile phones are the preferred mediums of chat, this Morse-stricken set insists that its technology is older (not outdated, mind you), cheaper, faster and far more independent since, as hamster Nilesh Rathod declares, ``We're wireless, we don't have to depend on towers.''

On Friday night, however, the hamsters were more than happy to take refuge in one of the many control towers (also called Baywatch towers) rigged up on the beach. From their exalted bamboo Olympus__the hamsters were quick to assert proudly that they were the only non-governmental group to have a tower all to themselves__they opened lines of communication between the BMC, traffic police, lifeguards, First Aid and ambulance centres, and their other towers at CP Tank, Prathna Samaj and Opera House.

The scene at Chowpatty was a masterful inversion of the Tower of Babel tale. Here, the towers were the peaks of calm and communication looking down at the Babel below. And what a boisterous babel it was that whooped and flowed towards the sea, tossing vermilion and caution to the winds, mashing a million marigolds into the sands. Matted with humanity, its waters turgid with idols and with megaphones shrieking for attention, Chowpatty was seething proof of Galbraith's famous description of India as `a functioning anarchy'.

All night the static and crackle and chatter went on till at five in the morning, after being touched by hundreds of supplicatory hands seeking mannat and threading through the ``sensitive Muslim areas'' in Byculla where it was garlanded by the Hindu-Muslim Ekta Committee, the gigantic 30-feet-tall Lalbaugcha Raja slowly rolled in.

Communalism was in abeyance and cosmopolitanism in evidence at the various beach service stalls. Cheek by jowl with the Muslim Ambulance Society, Saifee Ambulance and the St John's Ambulance Brigade were the Cosmopolitan Progressive Group doling out iced drinking water and the Haryana Mitra Mandal providing puri-bhaji. The eco-religionists were aggressively represented too in the parade of Clean Mumbai Foundation banners strung along the barricades. The BMC control tower displaying some uncharacteristic semantic savvy had painted on its banner: Swachham Shivam Sundaram.

Despite repeated admonitions on the mike to parents to hold on tight to their children, ``Lahan mulanni hath sodu naka'', 65 children were lost and found, with more than a little help from the hamster crew. Thanks to the excellent security arrangements made by the BMC and police__one hamster was even stationed aboard a lifeboat__there were no major mishaps this year. Last year, when an overly chubby Ganesh was stuck between truck and beach, the hamsters had to summon a forklift to unwedge him. This year the transition was smooth.

``I've been watching the immersion for the past ten years and seen how things have improved,'' says P.D. Karguppikar, assistant divisional fire officer. ``The idols move fast, there's better sanitation and no one goes thirsty. Groups like the ham operators have an important role to play.''

More than 700 massive Ganeshas (12-feet-plus makes for massive) were immersed at Chowpatty alone. No one has a count of the little roly-polys that streamed in all day on carts, on shoulders, in taxis and even in a Qualis or two. Itinerant photographers with polaroid cameras made a killing and the few brave foreign tourists who had ventured forth to capture a definitive slice of India unplugged clicked away deliriously. It was a day of Modak moments like no other.

---

Beware of the 'Vultures'!
from Jerry Heien, N9AVY on September 16, 2002
View comments about this article! (http://www.eham.net/articles/3816#comments)

No one really likes to think about it, but someday we'll all be Silent Keys. Those who are left behind will no doubt be "stuck" with a lot of equipment and parts which they may not know how to dispose of; more precisely, how to get some of that hard-earned cash back that we invested in all that "junk"
The simplest way to protect the "heirs" from being confused and possibly ripped off is to make a complete inventory of your shack and workshop. Finding the current market value of used equipment might be difficult, but a listing of purchase prices is a good start. It would be nice if local clubs had a committee, which could help by figuring out current market prices so the heirs would be able to get a decent return on our investment.
Recently, I was present at an estate sale where a fellow ham offered the widow a measly $200 for equipment that was easily worth twice that and maybe more. I paid half that amount for just one older radio! Unfortunately, there are many of these "Vultures" out there who take advantage of these situations and will take it all out to hamfests or put it on eBay.
These "vultures" are really slick businessmen who use ham radio as a vehicle to make money and are seldom heard on the air unless they hear of equipment for sale. When they get to a sale they tell you it's old, outdated and they probably wouldn't be able to sell it for very much. When you hear that line, you can put your ear next to the guy's head and hear the cash register ringing!
If you go to hamfests be sure to find out who the "vultures" are and never buy anything from them. Maybe they'll go away. The local ham grapevine should be able to identify these characters for you.
Protect yourself and your survivors by having a complete inventory and access to honest hams who will assist your survivors in disposing of your equipment.

You are right on target about this. Write down all your equipment--what you paid for it and what it is actually worth. This will have to be updated from time to time.
Get a trusted friend and ask him to take care of selling your things and/or advising your loved ones of their worth. Let your family know about this arrangement. This fellow should know the market or how to learn the market value of these items and then list them for sale or auction.
Screw the vultures. Make em fight for it on ebay.

73,
Steve

The Vultures are usually pretty obvious at the swaps. They also make the rounds at closing time looking for the ham with the dismayed expression on his face as he looks at the pile of unsold equipment he has to put back into his car and lug home. The $20 bills come out and that cash register sound you mention starts clanging away while a ham goes home with chump change but an empty trunk. The only good news is that the XYL will probably be happy the stuff is gone.

Another of the "Vultures" out there is the "charitable contribution" where you donate cash or equipment to an organization that leads you to believe that it will be put to use directly in perhaps an underdeveloped part of the world or a public group who would otherwise not be able to afford the equipment. Then, lo and behold, the stuff appears by magic on the equipment boards around the Internet.

Perhaps it is also wise to ask the charity for information about disposition of donations, operating expenses, salaries, overhead and other deductions from those donations. With the these expenses running up to 85% of the donations in "legitimate" charities, what happens to your good intentioned donation? I guess it isn't only the buyer who needs to beware.

Mail this to a friend! (http://www.eham.net/forums/mailto/1?id=14987)

Twice I have handled estate sales of a deceased friends ham gear. Both times the "Vultures" were his "other" friends. I've been called bad names by both the sellers and the buyers. The Wife said I didn't get enough money and the buyers said I was ripping them off. Both times I took zero for myself. (in case you were wondering) As a result, I said no to the last one that asked me to do an estate sale. My best advice is to make provisions for the disposition of your ham equipment in writing before it's too late. You can list it with prices you think it's worth and get a person lined up to sell it for your spouse. Or you can give it away or whatever. But, you are doing no one a favor by asking them to sell your ham gear in case of your going SK! I was treated badly by both the family and the buyers. And the emotions I went through were bad enough. In both cases the hams that went SK were dear friends of mine. My best advice is to tell your spouse to give the gear away, first come first served. And put a donation box by the door. Do not put one of your dear friends in the position of trying to satisfy everyone. Because you cannot satisfy anyone in these cases.
P.S. The one I refused to do, was bought by a few of his "friends" that put their money together. You should have heard these "sickos" laughing and talking about how they ripped off his son. Seems like the moral turpitude of people now days turns to water, when faced

with a money situation. I'm just a human with my own weaknesses, But money is not worth trading "MY SOUL" for.

Well, I myself would never take advantage of a widow. I just couldn't look myself in the eye every morning shaving knowing I hoodwinked an old lady. When you guys take on these transactions, please do the right thing and offer a decent price. Having said all this, most family members of silent keys are just looking to unload fast and are really quite glad to get something for it. As you get older, it may be wise to begin unloading the more obscure stuff out of your shack and just go with fewer and newer pieces of equipment. Also, donating the equipment to a ham club or community college is another option.

Mail this to a friend! (http://www.eham.net/forums/mailto/1?id=14995)

I will be facing surgery in the very near future, and because of that, I made a complete list of every piece of ham radio gear that I own, down to the digital clock. I made note of all serial numbers and model numbers. I also wrote down what I thought would be a fair price for someone to pay for my equipment, and I arrived at those prices by getting a good idea of prices being paid for used gear on eBay and other internet sell/swap boards. I have a long-time dear ham friend who I have asked to manage the selling of my gear if I die before he does. I told him he could have any of the gear he wants but he knows the money received will go towards my grandchildrens trust fund and that I want the bulk of it sold.

I think I have taken the correct approach but I am open to further options or ideas.

I make a copy of the ad from where I purchased the equipment. If used equipment, a copy of an ad and write the purchase price and note "purchased used". Then I attach that to the inventory. Also, I cirle or mark any options on the ad such as filters etc, that I may have purchased with the radio. Since I run some LMR 400 and 600 coax for VHF work, I even have that there because it "looks like wire" to my family. Actually, I put the folder in with my life insurance policies because my wife knows where they are stored. Just some ideas.

Mail this to a friend! (http://www.eham.net/forums/mailto/1?id=15003)

Yeah, it's pretty bad when your so called 'friends' turn on you and your family at their time of grief. I've heard more than one story about the $200 Alpha 76 sold because some widow just wanted 'it out of here'.

One other idea is to check with the ham store you do business with on their estate policies. You may just do your widow/family a big favor by having the ham store handle your estate and forget about these other 'helpful' guys. Check with the salesman the next time you buy some gear and get a business card or two for your will folder. At least most of the businesses will try to help a customer's family in need I'd believe and at least attempt to treat them fairly.
Forget eBay and it's pricing, anymore the pricing of ham gear on eBay is rediculous and at times exceeds what you can buy it for new. A gear-list updated yearly is an easy spreadsheet we all should have in that will folder too....

As an aging ham, approaching 63 (gads -- how did that happen?) I, too, have made plans. Some basic familiarization with the equipment to my wife has helped her understand, but she is in no way technically inclined (she thinks a pencil sharpener is over her head) so it was time to give her some real help.

Aside from creating folders in the desk drawer, correctly labelled, to contain manuals and spec sheets, I decided to do something that would help the non-technical. I made a list of all the equipment, first. I pretended I was going to sell it, which allowed me to think in

terms of "what goes with it" - that is, microphone, power cord, crystals, patch cords, manual, etc. Then I took a series of photos of the station setup the way I normally keep it. Using a felt-tip marker, I circled the individual station items on the photo, and gave each item a "key" number. That number relates back to the typed list. She can now look at the photo, use the key number, refer to the list, identify the item, its approximate current value, and everything that goes with it. If I make changes to the operating bench, I photograph it again, and re-do the key.

I also photographed the home breaker box, and marked on the photo the two breakers that shut off the 220 VAC to the shack. Those breakers control all radio equipment that is on the operating position. This means she can turn off the power and safetly disconnect equipment all by herself.

Equipment that is not currently being used is also photographed. Again, it is related by a key number back to the same list. Its condition, if it needs repair, is marked too, not in specific terms, but generally, like "needs speaker" or "no audio output," or "audio but no signals heard." This way she can tell a prospective buyer that the equipment does not work, can give them an idea of what may be wrong with it, and can price it accordingly.

Since she is not into computers, all this is on paper and hard copy photographs. There are directions about how to contact someone who can help her advertise it both in area papers and, if need be, on the web. In the long run, as someone says, most widows simply want to get the stuff out of the way, and she may take far less than market value. But the choice will be hers and she will have the information to make that choice.

In addition, I have two very special boot disks for the computer! Each one will boot the computer onto a floppy disk, and then give her prompts of what she can do next. The recommended choice is to reformat the hard drives, and reset the partition information. Anyone can do it, and no computer literacy is required. While it is true neither of those actions completely destroys data, there is a second floppy disk in the series that will allow her to write zeros to the entire hard drive. The idea is she will undoubtedly want to sell the computer, and we would not want personal information left on it. Again, the option of using the second disk is up to her, for if she gives it to one of the kids, she may not care about the possibility of recovery of data, so may choose not to write zeros to the hard drive.

As I noted, I'm in my early sixties. But even those in their thirties may find such things useful, as one just never knows. Making the burden lighter on those remaining behind should be a priority for all of us.

And as an addendum to the previous, I have also begun unloading the "non-essentials." I really hated to part with some of it, but the fact is, I will part will all of it someday. I had a Hammarlund rig, HX-50 and HQ180, which has now been sold. My second Collins S-Line

has also been sold. An old National receiver that worked fairly well has been sold. Remaining gear is the gear I actually use on a daily basis, and is covered in the photographs. We who tend to collect boat anchors, though I am not really a "collector" have things lying around with very arbitrary values - worth hundreds to one person, doughnuts to another. I found it is best to sell them while I'm in control, rather than wait and let her do it when I'm in a nursing home or pine box. Things of known value are easier, but that old Hallicrafters may be worth quite a bit to a collector, and not worth a box of Cracker Jacks to a digital radio fan.

About three times in the past two years, I was contacted by a non-ham family member who was trying to dispose of the remains of a ham's estate (in one case the heirs, one the widow, and one the executor of the will).

In all three cases, the story I heard was of some (unidentified) ham or hams who either claimed that some of the equipment was promised to them -- and I suspect that was more or less true, especially when one of the buyers offered $$ and didn't expect an "inheritance -- and of other hams or antique radio dealers who tried to low-ball them on the value of the equipment, and get it for close to nothing.

Sadly, none of these cases was local to me (one was about 2 hours away, the other two out of state). In the two out of state cases, I got ahold of a friend who could help the family out. In the third case, I tried to do that but never heard back from them.

Keep in mind, of course, that this breed of vultures is not just a despicable type of ham, but a despicable type of human being. They do similar things with all sorts of estate sales.

In any event... if you're interested in reading the sad story of what happend to the 8AIC estate, go to http://doit.pgh.net/~wolfie/washrag.htm and download the September 2002 issue. N3RHT's article is on page 5.

When I go "SK" some day, I just hope my radio gear goes to some one who will enjoy and use it. My XYL won't need the little cash she might get for my radios.
So with that thought in mind... At age 52, I have been an active ham for 37 years. I plan

to be an active ham for 20 more years (knock on wood.) So if your outlook is shorter than mine, I would be honored to be mentioned in your Will. I will be happy to "pass it on" in good time... ;-)
My address is good in the Call Book...

I can only offer what our local club does- we have a group of no less than three knowledgable hams go over to the home and price everything. They are not eligible to purchase anything at that time. They make a list with prices, and present it to the widow(er). (We've only had to deal with widows so far.) After approval, the list will be made available to club members on a first-come first-served basis. Any leftovers are placed on E-bay, and the fees are subtracted from the proceeds with the remainder going to the widow. Better yet, would be to elmer a son or grandson into the hobby, and let them price the gear (or give it to them). My most recent purchase was a set of Drake twins from my own elmer's SK sale, and I'll never sell them. I bought them for a fair price, even though to me, they're priceless! One problem with letting the original owner price thier own SK sale is that many times, they overprice big-ticket items and they won't sell. TS-940? I'd price one at $1500.00, but being brutally honest, you're lucky to get $600.00 out of one these days....things just ain't like they used to be! -Web in Myrtle Beach, SC KR4WM

Guys, there really is a way to handle this without going through the arduous task of listing everything.

We all have trusted friends, right? If not, why not? Surely, there is one, or maybe there are two or three other hams - guys you think of first when you think about putting up a new antenna, or doing an outside-the-club Field Day. Guys you drink beer with (if young enough) or trade surgery stories with (if older).

Just make an agreement with them - a gentleman's handshake is enough. And let your spouse(s) know. We've all agreed that we'll take the load off the other guy's spouse if the time comes. We all know and trust each other. We have stations of similar capabilities, so there's no coveting going on, and we're capable of knowing what a fair price is.

I'm in my late seventies. My wife knows the list of 3 guys to call in the event of my demise.

And, when it's all said and done, this should NOT be a big deal. If your ham station's financial value is a large part of your nest egg, then you have screwed up priorities anyway. Your poor wife should not have had to go this long sacrificing so much just so you could have your radio hobby.

On that last part, I'm probably preaching to the choir. If you're in your seventies and have been married a long time, then you've already got that figured out.

I heard of hams scouring the obituaries daily and then going online and doing a call-sign search. If the SK was a ham, they'd "make a visit" to the house and offer thier condolances and ask to buy the equipment. Pure vultures indeed.

When I go SK, I've asked my family to stack the radio gear up in the coffin with me. I hear the DX is good up in Heaven.

Beware another kind of vulture, too!

In recent years I've been tasked several times by "widows and orphans" to help dispose of estate gear. Some of the people I knew, most I did not. My response has been that I'll take

the equipment and clean it up, check it out, repair (simple only!) if necessary, and sell with MY warrantee -- for a small commission.

I also provide them a detailed listing WITH the price I hope to get for each item, and urge them to check it with another ham if they wish. It can be fun when it's mobile gear, hand-helds and station accessories -- but linears and boat anchors are back breakers!

Recently I got an HRO-60 as part of an estate; I found the power tranformer had a short that popped the proper fuse and -- with a heavier fuse -- heated notably and started to stink in 2-3 minutes.

I took it to a hamfest, told everyone who admired it the problem, and ended up selling it for half its working value to a guy who "Just couldn't wait to get it home and fix it up and use it!"

The very NEXT DAY I was at another hamfest when I found it on a table for $375! I asked the woman minding the table if they were telling would-be buyers about the shorted power transformer and she responded "I don't know nuttin' about that!" When I returned a few minutes later the HRO-60 was gone; I sure hope the buyer got the seller's REAL name and phone number!

The moral is that there is more than one kind of vulture out there, so beware!

Mail this to a friend! (http://www.eham.net/forums/mailto/1?id=15062)

Got another tip from a fellow ham at work that we all ought to think about.

His way of unburdening his wife went like this.

"Honey, the way I see it, the total amount of money that you could get from my ham gear if I die is about $20,000. There are 75 items, so that's about $250 each. How would you like to handle it?"

She replied, "If they're worth that much, really, do you suppose you could pre-arrange that the local ham club could take it all as a donation, and I'll just write it off? You could just fill out a list with what's there, when you go, the club gets it, and then they can sell it, and I really don't care how much they get for it!"

Done deal.

Here are the rules, guys:

1) Make it SIMPLE on the remaining family. If they are not fluent in radio, make sure they do not have to make ANY decisions.
2) Don't make them work any harder to maximize the money they get from it. If you've passed away, they really don't care about the money, it's simply NOT important. It's only us greedy hams who worry so much about the money.

3) Make it SIMPLE on the remaining family. If they are not fluent in radio, make sure they do not have to make ANY decisions.
4) How complex are funeral arrangements? Getting rid of the rigs involves about the same amount of money. It should be much simpler.
5) Read rule #1 again.
6) An estate is not the thing you want to get the most money out of. When selling an estate, the goal is to make it simple on those who have to deal with it.
7) Read rule #1 again.
8) IF A PIECE OF EQUIPMENT NEEDS ANY REPAIR WHATSOEVER, THEN THE ONLY ACCEPTABLE VALUE IN AN ESTATE IS ZERO. NEVER VIOLATE THIS RULE. If it needs fixing, do it NOW, before someone ELSE has to try to negotiate getting maximum dollar for it. There are people whose entire business is about maximizing money from estate sales. Their reputation is ruined if something they sell is not in working order, and they won't have anytihng to do with it. Those items are what end up in the trash heap, even if it's only a speaker or a fuse.
9) Read rule #1 again

And finally, in case you didn't get it...the money is NOT the most important point here. Rule #1 is.

I have been asked to handle the estates for about two dozen friends now - hams and non-hams. I can GUARANTEE you this - the widow who only got 20% of what the stuff could have fetched (and knew about it) but didn't have to mess with it, is always happier than the widow who got "the fair price" but had to deal with even ONE buyer directly.

The widow is not only lacking in knowledge about radios, she is also utterly lacking in any desire to "do deals" the way hams do, whether she gets a good deal or not. If that thing were her bag, then she'd be doing the hamfests with the OM, and she'd be able to handle this all on her own without any help.

Joe, W9JUV, brought up a good point about another kind of vulture, the quick buck artist at hamfests. Some time ago I brought a nice looking SWR/power meter at a fest and was told it was "from an estate sale". Looked to be in good condition; so I didn't mind paying good money for it. Well, I got it home only to find out it was a dead as the SK whose estate it may have come from.

When a seller at a hamfest tells me "it's from an estate" or "it worked the last time I used it", I now just walk away no matter how good the deal looks.

This thread has set me to thinking. I have heard tales
of the family of the SK taking the radio equipment to
the dump or tossing it in dumpsters. We aren't going
to last forever, but maybe sometimes even the vultures
do good by keeping the old gear in circulation awhile
longer. Once at a swapmeet a radio club was selling
the gear of an SK and some ham walked up and said
"Look at what I found in that old Hammerlund receiver."
He had a handfull of $100 bills. The old fellow had
been storing his excess cash in the equipment. The
total was over $10,000 and was given to the widow
(who needed it pretty badly). The equipment was
throughly searched and then sold at auction (good
prices were cajoled out of the bidders). I like to
think that most hams are honest. I am often disapointed.

Last year, I rounded up an old Heathkit oscilloscope that I had purchased for $15 sometime back that I never ended up using. I cleaned it up, put some new rubber feet on it and generally tightened up everything. I took my blind friend to the swap meet with the intention of selling it. While I was walking around, a vulture came by bought it from my friend for $5. The guy just took advantage my friend while I stepped away. So lesson learned:
Buy new and keep new. When it comes time to sell, give it away as a charity item to a new ham, community college or a local ham club or let a friend have it for nothing. Life's too short to deal with people with low mentalities and greedy natures.

Time to call the local police fraud department. This is simple fraud and misrepersentation. The b*stard should goto jail. Using your own minor daughter is about as low as you can go. Get names of others ripped off by this jerk if they are willing to file a complaint. Even if it doesn't result in an arrest, just having the cops "visit" him just might put the fear of God in him! The reason this continues to go on is no one is willing to put forth the effort to put a stop to it. What a stinkin' slimeball!!!

73
Randy KB8ASO

p.s. Have a trused friend place your ham items on Ebay when you pass on. The widow will know she got top $$$ and the Vultures can go to a very HOT place!!!

This is an ideal activity for the arrl/local clubs to provide.

If a family member could know to contact the arrl to find a local club that would handle this, the local club could assist. It seems right on target for ham activity.

Not only could there be equipment to deal with, there also could be towers they would have no idea what to do about. A local club would be more of a check and balance than one person, unless it's a group of vultures!

Wow, thanks for your article. Its about time this has been brought up. We have a few of these jerks around here. They "buy estate sales" Meaning they knock on the doors of the widows before the SK is even burried and tell them this is worthless I will give you this and trust me its a good price. And so on. I have seen it on 2 occasions here. I got involved in it the first time and got the crooks out of the mix. Its a real shame to see this sort of thing in the hobby.

Here is something else to watch out for, and I don't know what to do to protect yourself unless it might be to get a written agreement signed by both the friend and his spouse. And then keep daily contact with them until you get your property back. Sounds unreasonable?

I am talking about loaning of equipment to closest friends and they pass away while it is still in their possession. It would be bad enough if it was just a multimeter or a handeld rig, but in these two cases I am talking about a very late Collins 75A4 and in the other case the latest S line. I loaned the A4 to the ham who got my dad started in ham radio in the early 30s. The S line to a friend of mine. Both passed away within a short time after my last contact with them. The daughter of the one who had the A4 sold it at a garage sale, so I discovered about 6 months later. In the case of the S line, I was told by a mutual friend it was gone before the widow and kids even had time to arrange the ham garage sale.

Somebody had to have had their eye on that, and made darn sure it didn't get away, by rushing in before someone else got to it. And with the amount of speed involved I almost wonder if it may have been someone who had asked my friend if he wanted to sell it, but was informed it wasn't for sale because it was a loaner. The only thing I could find out about the transaction is that whoever he was, the offer he made wasn't a cheap one. So he didn't get by with "stealing" it in the monetary sense. He was only able to prevent it from going back to the true owner (if that was indeed his intent for getting there so fast). So far as the widow is concerned, she doesn't remember the day I brought it over, even though she was sitting at the table I set it on, and attentive to the discussion that her husband and I were having about it. And there was no use of my causing any trouble because she had since that time suffered through surgeries, been bedridden for several months, and was on strong medications. So what do you do?

If we loan equipment, no matter what it is, it seems there should be some sort of written statement about who it belongs to. Make, model, serial number. The friend with the 75A4 was 91 years old, so I should have anticipated that possibility, but his wife knew it so why bother? Well, I'm told by the daughter that her mother passed away a few days after her dad.

The other ham passed away untimely in his mid 60s, which only goes to show you never know. But then I wonder how a written statement would have helped get the S line back from the person who zeroed in and got it before anyone had time to even think about it? As I recall, I only knew of his passing through a mutual friend of ours who called in a few days, and it was already gone then!!

Sorry, an add to above because now I recall how it went.

I received a call from our mutual friend a few days after to to tell me our friend had passed away. In the shock of the moment I forgot all about the S line.

Then a couple of days after I received another call from the same friend who inquired "Say, do I remember something between you and Don about a Collins S line?" I said yes and explained, then I asked if he would be able to go over and get it. That's when I found out "Too late, it's already gone, that's why I'm asking you about it".

PLEASE........GET REAL !!!

Most the the stuff that we call "vintage ham gear" would be thrown out in the dumpster as the heirs clean out the basement after the SK is buried.

If it wasn't for alot of the "Vultures"....(resellers),
we wouldn't have half the crap on eBay that we all love buying!

Next time you hear of a reseller buying an estate, tip your hat to him and thank him for making the equipment available for the rest of us...instead of occupying space in the landfill.

As for us hams....We should have the foresight to get rid of our equipment before we die. How many times have you seen some poor widow try to deal with an equipment sale. The ham that kicked the bucket should have taken care of business after his fouth bypass surgery!

Don't knock the vultures when the blame squarely aims at the ham who was a compulsive collector of crap or in a total state of denial in his own mortality!

Good thought on loaning gear - I think that I'll be tagging all shack equipment with owner's Name,
Callsign, and contact information (Telephone and Email). After all, 73 years old is just another 48 years from now... and that way, I can be sure that people don't "accidentally" forget who's gear it is (it won't prevent "intentional" forgetfulness).

I'm thinking a nice little "repair tag" type ticket (as one might see on a lawnmower down at the local hardware store to get fixed up) attached to a crimp-on ring terminal, put under one of the case screws on the back.

WB9GKZ says > "PLEASE.....GET REAL !!!

Most the the stuff that we call "vintage ham gear" would be thrown out in the dumpster as the heirs clean out the basement after the SK is buried.

If it wasn't for alot of the "Vultures"....(resellers),
we wouldn't have half the crap on eBay that we all love buying!

Next time you hear of a reseller buying an estate, tip your hat to him and thank him for making the equipment available for the rest of us...instead of occupying space in the landfill.

As for us hams....We should have the foresight to get rid of our equipment before we die. How many times have you seen some poor widow try to deal with an equipment sale. The ham that kicked the bucket should have taken care of business after his fouth bypass surgery!

Don't knock the vultures when the blame squarely aims at the ham who was a compulsive collector of crap or in a total state of denial in his own mortality!

Pat WB9GKZ"

I wondered how long it would before this sort of bulls*** showed up! Some people would justify dealing with the devil. PLEASE GIVE US A BREAK. There will be plenty of vintage gear on ebay and elsewhere without vultures and jackals. "Total state of denial about his own mortality my foot". Ever hear of accidental death?

List your equipment in your will / family trust - and how you want the equipment donated, sold or whatever.

Consider donating equipment to organizations or local clubs where they might give the equipment to new hams who may not have the $$$$$ to buy expensive new equipment. Maybe the SK was even a member of the club or organization that is receiving the "gift".

Then everyone wins.

If you can, dig up an article that was in QST around 1967 called "Are You Ready To Leave?". Pretty relevant to this discussion.
